# Report on the Charitable Dispensaries

UNDER THE

# GOVERNMENT OF BENGAL,

## FOR THE YEAR 1877.

No. 1079B.G.

FROM THE OFFICIATING SURGEON-GENERAL OF BENGAL,

TO THE SECRETARY TO THE GOVERNMENT OF BENGAL,
JUDICIAL, POLITICAL, AND APPOINTMENT DEPARTMENTS.

*Dated Calcutta, the 18th December 1878.*

SIR,

IN submitting the Annual Report on the working of the Charitable Dispensaries of Bengal for the year 1877, I have the honor to say that it would have been done long before had I received all reports and returns of Civil Surgeons in proper time. But in the submission of these documents there is always great delay, as they do not come to me direct, but are sent by Civil Surgeons to the Magistrate of the district, who passes them on to the Commissioner of the Division, from whom I finally receive them. The last received of these documents only reached my office on the 27th September, and some have not yet come to hand. Until all have been received the tables cannot be prepared. I could not, however, delay longer, and submit the tables though incomplete.

2. The following scheme exhibits the number of dispensaries during the year:—

| | |
|---|---|
| Remained open, 31st December 1876 ... ... ... | 230 |
| Established during the year 1877 ... ... ... | 12 |
| Total ... ... | 242 |
| Abolished or closed ... ... ... ... | 3 |
| Remaining, 31st December 1877 ... ... .. | 239 |

Of the dispensaries established during the year, two belonged to class III, grade 2, viz. Rampore Haut and Matbaria; eight belonged to class III, grade 3, viz. Hurreenavee, Kissoregunge, Bamunkhund, Synthia, Radhanuggur, Dalalbazar, Ticari, and Bajitpore.

Two were opened under Rule VII of the Dispensary Manual as sub-divisional dispensaries, viz. Jamtara in the Sonthal Pergunnahs and Bagdogra in the Rungpore district. The dispensaries named below were closed during the year, viz. Kalikapara, Gulsee, and Buddengunge in the Burdwan district. All of them belonged to class III, grade 3.

3. In tabular form is shown the grading of the various dispensaries, and the changes that have occurred during the year.

STATEMENT No. 1.

| Class. | Opened on 31st December 1876. | Since opened. | Total. | Closed. | Remaining on 31st December 1877. | Population of Bengal. |
|---|---|---|---|---|---|---|
| Main | 33 | ...... | 33 | ...... | 33 | 60,484,831 |
| Branch | 34 | ...... | 34 | ...... | 34 | |
| Sub-divisional | 12 | ...... | 12 | ...... | 12 | |
| Total | 79 | ...... | 79 | ...... | 79 | |
| I Class | 15 | ...... | 15 | ...... | 15 | |
| II " | 12 | ...... | 12 | ...... | 12 | |
| III " grade 1 | 22 | ...... | 22 | ... | 22 | |
| " " " 2 | 24 | 2 | 26 | ...... | 26 | |
| " " " 3 | 66 | 8 | 74 | 3 | 71 | |
| Rule VII | 12 | 2 | 14 | .... | 14 | |
| Total | 151 | 12 | 163 | 3 | 160 | |
| GRAND TOTAL | 230 | 12 | 242 | 3 | 239 | |

There were no temporary dispensaries opened during the year in the Burdwan district, where they had been numerous formerly. In the Beerbhoom district nine temporary endemic fever dispensaries were opened during 1877, but all were closed during the year. Two temporary dispensaries were also established for the treatment of cholera at Mouressur and Bhulpal, in the Beerbhoom district. In the Midnapore district, between October and December, there were 11 endemic fever dispensaries opened; but of these six were closed before the end of the year, so that they were only in existence for a few days or weeks.

4. No returns have been received from the following dispensaries:—Jessore, Nuldunga, Jhenidah, Magoora, Chundra, Shridhurpore, Dowlutpore, Khoolnah, Bagirhat, Durbhunga, Tajpore, Rosera, Hiranpore, Bazitpore, Dowlutkhan, Alipore-Buxa, and Chowghoria.

It thus follows that from 225 out of 239 dispensaries returns have been received.

5. In many instances it would seem as if dispensaries were got up in order that the name of the founder or founders may be brought to the notice of Government, and shortly after thanks have been accorded it sometimes happens that the promoters grudge further payments. Under such circumstances would it not be a good plan to secure that the maintenance of the dispensary is guaranteed for a certain number of years before its opening is permitted, or that a certain sum should be deposited, which will secure an adequate income monthly? These institutions in Bengal are at present in excess of the number of properly qualified medical subordinates fit to be put in charge of them. I allude particularly to small branch dispensaries, and could indicate several of which the native doctors are quite unfitted to hold such a position, which they occupy simply because there are no better men to put in their places. Any one who will look through the list of the native doctors in Bengal must see how many young and inexperienced men are in independent charge of dispensaries. Those which are under Assistant Surgeons are, with one or two exceptions, well attended to. It seems hardly necessary to say that unless trustworthy men are in charge of dispensaries, especially those at a distance from the head-quarters of the Civil Surgeon, they are next to useless, or even worse than useless.

6. The statement which follows shows the town or village and district in which dispensaries have been opened, their class and grade, guaranteed income, and the orders of Government sanctioning their opening:—

STATEMENT No. 2.

| LOCALITY. | District. | Class. | Number and date of Government orders sanctioning their establishment. | Guaranteed monthly income. | Source of income. |
|---|---|---|---|---|---|
| | | | | Rs. | |
| 1. Jamtara ... ... | Sonthal Pergunnahs. | Rule VII ... ... | No. 1879 of 11th May 1877 ... | 15 | |

* Not stated.

7. Taking the 225 dispensaries from which returns have been received, it is found that 140 admitted both out-door and house patients, or 62·2 per cent., while in 85 dispensaries only out-door patients were received, or 37·8 per cent. The numbers for 1876 were as follows:—Dispensaries from which returns were received, 224, of which 146 took in house and received out-door patients, or 65·17 per cent., while 34·83 per cent. only took out-door patients. The following table shows the number of out-door and house patients treated, and from this it appears that 22 dispensaries admitted under 25 house patients in the course of the year, while two had upwards of 1,000, these being the extremes. The 140 dispensaries which took in house patients also received out-door patients; but there were, besides, 85 which only received the latter; and taking the whole 225, we find that the annual admissions of out-door patients varied from 250 in two dispensaries to upwards of 10,000 in ten others. A comparison of the results of the previous year can also be obtained by consulting the table which follows:—

STATEMENT No. 3.

| | IN-DOOR. | | | | | | | | | | OUT-DOOR. | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Under 25. | 25 to 50. | 50 to 75. | 75 to 100. | 100 to 250. | 250 to 500. | 500 to 750. | 750 to 1,000. | Upwards of 1,000. | Total. | Under 250. | 250 to 500. | 500 to 750. | 750 to 1,000. | 1,000 to 2,500. | 2,500 to 5,000. | 5,000 to 7,500. | 7,500 to 10,000. | Upwards of 10,000. | Total. |

8. I shall now call attention to the medical subordinates in charge of the various dispensaries, and for this purpose produce the statement which follows:—

STATEMENT No. 4.

| | | | 1876. | | 1877. | |
|---|---|---|---|---|---|---|
| Medical Missionary, Hiranpore ... .. ... | | | | 1 | | 1 |
| House Surgeon, Dacca ... .. ... ... | | | | 1 | | 1 |
| Assistant Surgeons ... | 1st grade ... ... | | 6 | 55 | 5 | 54 |
| | 2nd „ ... ... | | 4 | | 8 | |
| | 3rd „ ... ... | | 45 | | 41 | |
| Hospital Assistants ... | 1st class ... .. | | 10 | 24 | 5 | 8 |
| | 2nd „ ... ... | | 8 | | 3 | |
| | 3rd „ ... ... | | 6 | | 0 | |
| Apothecary and Vernacular Licentiate Class Native Doctors ... ... ... ... | | | | 141 | | 158 |
| Local Native Doctors ... ... ... ... | | | | 8 | | 5 |
| Total . | | | | 230 | | 227 |

Thus there were only eight hospital assistants in 1877, against 24 in the previous year; 32 in 1875; and 35 in 1874. They were withdrawn chiefly owing to being required for famine duty in Mysore and Madras; but their withdrawal is unfortunate, seeing that in many parts of Bengal they are the best class of men to put in charge of dispensaries. They are, besides, more manly in their ways than the Bengali native doctors, and are not so afraid of being sent to certain parts of the country, as some of the latter class state they are. Not very long ago there were Bengalis serving in Behar who could not speak Hindustani, but whom it was necessary to send there as there were no other men available at the time. One of these, who was ignorant of Hindustani, I found on one of my last inspections in the Shahabad district busy learning English, and on being told that he ought to learn the vernacular first in order to be able to talk to his patients, he replied that if he passed an examination in English he became entitled to Rs. 5 a month extra, while he should not gain anything by learning Hindustani. Some of the older Bengali native doctors serving in the dispensaries of Bengal are excellent men—trustworthy, careful, diligent in the discharge of all their duties, and much liked by the people among whom they live; but there are others quite the reverse, who are not to be trusted, and who are careless in the extreme. I know several such, whom I would not keep in charge of dispensaries if I had other and better men with whom to replace them. As a rule, the Assistant Surgeons are well educated and a highly useful body of public servants. There are, besides, many supernumeraries of this class, so that if it is desirable to get rid of one in charge of a dispensary it is easy to replace him by means of another and a better officer.

9. It seems to me to be a fact that of the vernacular licentiate class of native doctors who are educated at the medical schools of Bengal, and I know most of the one at Sealdah, the best students do not take Government service, but either go into private practice, or are employed in tea gardens in Assam and other places, where the emoluments are much higher. The reduction of pay to Rs. 10 so long as they are supernumerary has no doubt kept many from entering the public service, although it is the case that a native doctor who is well behaved and of ordinary ability does not need to wait long till he is employed permanently, if in Government service.

10. Of the 225 medical subordinates in charge of dispensaries, the whole of the Assistant Surgeons, as a matter of course, were well educated in English, and can read and write that language fluently; but there are also 171 hospital assistants and native doctors, of whom 84 had extra pay on account of being qualified in English, and nearly all the others, though they had not passed the test examination, could keep their records in English. I find it very desirable to consider no native doctor qualified in English and entitled to extra pay unless he really has a fair knowledge of the language and can write it well from dictation, so as to prove that he understands what he is writing, as I have often found that so soon as they have passed and gained their extra pay of Rs. 5 a month their interest in the study of English ceases.

11. The table which follows does not seem to call for any remarks:—

STATEMENT No. 5.

| Class of Medical Subordinates. | Number. | Drawing pay at the rate of | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | | Rs. 75. | Rs. 70. | Rs. 60. | Rs. 55. | Rs. 50. | Rs. 40. | Rs. 35 and under. |
| Hospital Assistants ... | 8 | 1 | 1 | 1 | 1 | ..... | ..... | 4 |
| Apothecary and Vernacular Licentiate Class Native Doctors ... | 158 | ..... | 1 | 13 | ..... | 23 | 39 | 82 |
| Locally entertained ... | 5 | ..... | ..... | ..... | ..... | ..... | ..... | 5 |
| Total ... | 171 | 1 | 2 | 14 | 1 | 23 | 39 | 91 |
| Totals for the year 1876 ... | 173 | ..... | ..... | 17 | ..... | 23 | 31 | 102 |

There were 54 Assistant Surgeons in charge of dispensaries. According to whether they are of the 3rd, 2nd, or 1st grade, they draw Rs. 120, Rs. 150, or Rs. 200. During the year there were in charge of dispensaries 41 Assistant Surgeons of the 3rd grade, eight of the 2nd, and five of the 1st grade.

12. The table subsequently given shows the total number of in-patients and out-door patients treated during the year, comparing results with those of the six previous years. In the year 1876 and 1877 the numbers were almost the same, there being merely an excess of 97 in-patients and 870 out-door patients in favour of last year. It will also be remarked that the rate of mortality among in-door patients has been very nearly the same year after year, varying from 15·41 in 1871 to 17·38 in 1877. In 1876 the rate of mortality was 16·81. The average rate for the seven years as given in the table is 16·51 per cent. I do not think it probable that this is correct, as I have known various expedients adopted in order to keep down the death-rate, such as discharging a patient a few hours before he dies—by making him over to his friends, or simply having his cot carried outside the dispensary and allowing him to die there.

STATEMENT No. 6.

| Years. | In-patients treated. | Out-patients treated. | Total. | Mortality among in-patients per cent. |
|---|---|---|---|---|
| 1871 ... ... ... ... ... ... ... | 17,892 | 405,528 | 423,420 | 15·41 |
| 1872 ... ... ... ... ... ... ... | 18,118 | 439,177 | 457,295 | 16·07 |
| 1873 ... ... ... ... ... ... ... | 20,240 | 598,470 | 618,710 | 16·22 |
| 1874 ... ... ... ... ... ... ... | 23,842 | 636,289 | 660,131 | 16·84 |
| 1875 ... ... ... ... ... ... ... | 22,009 | 698,730 | 720,739 | 16·89 |
| 1876 ... ... ... ... ... ... ... | 23,012 | 809,275 | 832,287 | 16·81 |
| 1877 ... ... ... ... ... ... ... | 23,109 | 810,145 | 833,254 | 17·38 |

The average death-rate of the last seven years is 16·51.

13. The total amount of medical aid afforded to the people not only in the town of Calcutta, but in all other parts of the province during the past year, as compared with 1876, is roughly shown in the following table:—

STATEMENT No. 7.

| | 1877. | | 1876. | |
|---|---|---|---|---|
| | Number. | Patients treated. | Number. | Patients treated. |
| Calcutta hospitals and dispensaries ... | 10 | 325,562 | 10 | 310,016 |
| Provincial hospitals and dispensaries ... | 225 | 833,254 | 224 | 832,287 |
| Endemic Dispensaries— | | | | |
| Burdwan ... | ...... | ...... | 15 | 39,555 |
| Midnapore ... | 11 | 22,630 | 17 | 70,183 |
| Beerbhoom ... | 9 | 2,505 | 2 | 752 |
| Serampore ... | 1 | 891 | 1 | 1,029 |
| Total ... | 256 | 1,184,842 | 269 | 1,253,622 |

14. The number of dispensaries in each division and district, the population of the district, its area in square miles, and the number of patients treated per cent. of population, are given in the next table, a comparison being made between the years 1876 and 1877.

In the whole of the province of Bengal dispensaries treated 1·88 per cent. of the population in 1876 and 1·91 per cent. in 1877.

STATEMENT No. 8.

| Division. | Name of District. | Area in square miles. | Population. | Number of dispensaries. 1876. | Number of dispensaries. 1877. | Number of patients treated per cent. of population. 1876. | Number of patients treated per cent. of population. 1877. |

* No return received. † Return from one only received.

15. Of the whole number of patients treated in the dispensaries in 1877, 60·9 per cent. were males, 20·4 females, 18·7 per cent. children under 12 years of age. In the previous year the proportions were males, 61·3; females, 20·8; and children, 17·8—so that the relative proportions in the periods compared are very nearly the same.

STATEMENT No. 9.

*Sex of patients treated.*

| | 1877. | 1876. |
|---|---|---|
| Males ... | 60·86 | 61·33 |
| Females ... | 20·38 | 20·83 |
| Children ... | 18·76 | 17·83 |

16. Statement No. 10, which gives the religion or caste of all patients treated in the two last years, exhibiting the percentage of each class treated,

does not seem to call for any remark, except that the proportions in the matter of sex are very nearly the same in both years:—

STATEMENT No. 10.

*Religion or Caste of Patients treated both in and out-door.*

| 1876 ... ... ... ... ... ... ... ... ... .. | ·13 | ·32 | 33·53 | 64·71 | 1·26 |

17. The next table gives the number per cent. of patients cured and relieved, otherwise accounted for, or died, with the average daily attendance of out-door and in-door patients. Here, too, the numbers recorded do not materially differ from those of the previous year.

The result of treatment in the case of out-door patients cannot be accurately ascertained, and, in fact, although it used to be given, it was invariably incorrect. According to the new form of dispensary annual return it is not required. Among house-patients the proportions of recoveries and deaths amounted to 67·28 and 17·38 respectively, against 68·36 and 16·81 in 1876.

STATEMENT No. 11.

| | PER CENT. OF TREATED. | | | AVERAGE DAILY ATTENDANCE | |
|---|---|---|---|---|---|
| | Cured and relieved | Otherwise accounted for. | Died. | Of in-door patients. | Of out-door patients. |

| Total ... | 67·28 | 15·33 | 17·38 | 7·92 | 35·75 |

18. The table which follows shows the dispensaries among whose patients the highest rate of mortality has occurred. It varied from 54·78 at Goalundo to 14·81 at Bhola. The average death-rate in the Presidency Circle was 30·55, in the Dacca circle 25·09, and in the Dinapore circle 26·62.

This table, however, is of little practical use, there being so many circumstances which detract from its accuracy.

STATEMENT No. 12.

19. The diseases which chiefly caused admissions are exhibited in statement No. 13.

As might be expected, the most prevalent diseases were fevers, which equal nearly 23 per cent. of the admissions. Cholera accounts for only 0·88; and small-pox 0·02.

Goitre furnished 6·66 per cent. of all the cases admitted; ulcers, 4·06; rheumatism, 4·98; enlarged spleen, 6·52; skin-disease, 6·51; and injuries, 2·81.

*N.B.*—The cases remaining on the 1st January 1877 are included in this statement.

20. It is curious to remark how little variation there is in the numbers of different years in many statistical particulars. I have already alluded to this in reference to some previous statements, and do so again regarding mortality of house patients, as shown in statement No. 14. Of the cases of cholera treated in 1877, 58·69 per cent. died; in 1876, 59·27. In 1877 there was a mortality of 44·75 per cent. of those treated for dysentery; in 1876, 43·09; next, of diarrhœa 38·75 in 1877, against 35·37 in 1876.

STATEMENT No. 14.

21. The prevalence of goitre in some districts is very great. Thus, in the dispensaries of Rungpore there was a total of 59,143 cases treated, of which 12,642 were goitre. In the dispensary of Purneah, out of 5,234 cases treated 2,184 were cases of goitre. In all the dispensaries of Bengal in the year 1877 there was a total of 833,254 cases of sickness treated, out of which 55,480 were cases of goitre, or 6·66 per cent. In the year 1876 the numbers were 832,287, total treated 65,703 cases of goitre, 7·89 per cent. In those parts of the country which lie close to the Terai, or foot of the Himalayas, it is much more prevalent than in the plains. It is fortunate that in this disease a cure in many cases, and in others a very decided improvement, is effected by one or more applications of an ointment of biniodide of mercury. The people know the value of the remedy in districts in which the disease prevails, and come long distances to dispensaries. I was told at Motiharee that on the weekly market day very large numbers of people affected with goitre flock to the dispensary asking for ointment.

22. The cases of leprosy were not numerous, and the expectation of cure from any remedy, including gurjun-oil, is much less hopeful—or perhaps very doubtful—or almost hopeless—might be the proper term to use. On this account such cases are hardly fit for a charitable dispensary, unless ulceration of any part is going on, and they ought rather to be sent to a leper asylum or alms-house when such exist The cases that can be received by dispensaries, especially branch dispensaries, being limited, only acute cases of disease, or such as are likely to benefit by treatment, should be admitted. In many instances, however, they are used as alms or poor-houses. I recollect seeing several cases of old age without disease which had been in dispensaries for months and years.

23. During the year there were 2,301 major and 37,908 minor surgical operations performed in the Charitable Dispensaries in the province, against 2,400 major and 37,929 minor during the previous year. There was consequently a decrease in the numbers by 99 major and 21 minor or less important operations. The more important operations were mostly performed at the dispensaries which were under the superintendence of the Civil Surgeon, by himself or the Assistant Surgeon. The hospitals and dispensaries in which the largest number of major operations was performed were Monghyr (224), Dacca (184), Dinapore (94), Mozufferpore (70), Moorshedabad (64), and Patna (61). Last year Monghyr also headed the list, showing 230 major or more important operations. Of the 2,301 major operations, 76 per cent. were cured, 7·4 relieved, and four per cent. died, against three in 1876. Two hundred and nineteen operations were performed on the eye and its appendages, and of these 155 were for extraction of lens, and showed a rate of 60 per cent. of recoveries; 154 operations for removal of calculi from the bladder were performed, with the result of 80·5 per cent. of cures, 9·7 deaths, 1·9 relieved, and 7·7 per cent. remaining under treatment.

24. The present classification of operations is not at all satisfactory, inasmuch as many are included as major which in my opinion ought not to be. In order to show this I have had the following table constructed, which gives an abstract of operations in the seven dispensaries in which most took place. From this it appears that although there are said to have been 224 major operations in Monghyr 155 of them are entered as large abscesses, seven as removal of tumours, and five as reductions of dislocations. So also in Moorshedabad there were 48 cases of opening of abscesses out of a total of 64 so-called major operations. More than one dispensary in other provinces might be named in which there were more operations for cataract in one year than in all the dispensaries in Bengal during the same period. According to the classification no doubt the only tumours that should find a place among major operations are those in the neighbourhood of the eye, when large, or deeply or dangerously situated; and the only abscesses are those in important regions or dangerous neighbourhoods. But that this distinction is attended to there is no means of knowing from a return, except that the mortality would be much greater if abscesses and tumours according to the correct classification were alone entered, whereas out of the 155 cases of abscess opened at Monghyr there was not a single death.

25. The amount of surgery indicated by these returns does not at all represent the figures which I conceive ought to be shown were every Civil and Assistant Surgeon to lay himself out for such cases, and according to my ideas the number of surgical operations is a better gauge of the estimation in which any particular dispensary is held by the inhabitants around it than any other test. The people of this country do not, as a general rule, to which there are exceptions, believe in our system of medicine, thinking their own better; but they have confidence in European surgery, and readily come to undergo operation from long distances to any dispensary which has a good name; and this good name is got through the assiduity of the medical officer in charge in attending personally to such cases. Some Civil Surgeons at present never touch a knife. I find that Superintendents of Dispensaries during the year operated in 472 cases, of which number 330 are returned as cured, 24 as relieved, 49 discharged otherwise, 43 died, and 26 remained under treatment in the last day of the year. There were 1,829 operations performed by medical subordinates during the year, of which 1,419 were cured, 148 relieved, 147 discharged otherwise, 50 died, and 65 remained under treatment on the 31st December.

26. The financial state of all the dispensaries is given in the tables at the end of this report, and in the statement which follows will be found detailed their aggregate income and expenditure. From the latter it will be seen that the average income of each dispensary was Rs. 1,882-7-4, and its expenditure Rs. 1,710-11-4, and in three previous years the corresponding figures were as under:—

| | Income. | | | Expenditure. | | |
|---|---|---|---|---|---|---|
| | Rs. | A. | P. | Rs. | A. | P. |
| 1876 ... | 1,967 | 1 | 8 | 1,886 | 5 | 8 |
| 1875 ... | 2,216 | 15 | 6 | 2,110 | 12 | 7 |
| 1874 ... | 2,051 | 0 | 0 | 1,985 | 0 | 0 |

STATEMENT 17.

*Showing Income and Expenditure of Provincial Hospitals and Dispensaries for the year 1877.*

INCOME.

| | | Rs. | A. | P. |
|---|---|---|---|---|
| Balance on 1st January ... | Invested ... | 6,75,784 | 6 | 9 |
| | Floating ... | 98,274 | 7 | 3 |
| | Total .. | 7,74,058 | 14 | 0 |
| From Government ... | As salaries ... | 96,934 | 0 | 4 |
| | As registers and forms ... | 1,753 | 10 | 6* |
| | As Europe medicines ... | 18,825 | 15 | 6* |
| | For diet of police cases ... | 1,360 | 8 | 8 |

27. The total income of all charitable dispensaries in the province for 1877, exclusive of the floating balance and the cost of medicines and forms which were supplied by Government, is shown in comparison with the five preceding years:—

STATEMENT No. 18.

| Years. | Total income. | Percentage of income to the total income received from— | | | | |
|---|---|---|---|---|---|---|
| | | Government. | Local funds. | Interest on invested capital. | European subscriptions. | Native subscriptions. |
| | Rs. | Rs. | Rs. | Rs. | Rs. | Rs. |
| 1872 ... ... ... ... ... | 2,91,601 | 38·61 | (1) 17·4 | 7·09 | 7·47 | 29·43 |
| 1873 ... ... ... ... ... | 3,10,886 | 34·31 | (2) 19·69 | 6·23 | 7·93 | 31·84 |
| 1874 ... ... ... ... ... | 3,36,197 | 35·83 | (3) 19·93 | 4·92 | 7·09 | 32·22 |
| 1875 ... ... ... ... ... | 3,74,902 | 32·60 | (4) 27·82 | 4·64 | 6·74 | 28·19 |
| 1876 ... ... ... ... ... | 3,77,017 | 32·50 | (5) 22·91 | 5·86 | 6·66 | 32·06 |
| 1877 ... ... ... ... ... | 4,00,160 | 30·73 | (6) 25·47 | 6·00 | 5·54 | 32·25 |

(1) 3·97 from municipalities and town committees and 13·43 from all other local sources.
(2) 5·17 ditto ditto 14·52 ditto.
(3) 6·77 ditto ditto 13·16 ditto.
(4) 7·22 ditto ditto 20·58 ditto.
(5) 8·97 ditto ditto 13·93 ditto.
(6) 7·27 ditto ditto 18·20 ditto.

There has been an increase in the total income for 1877 of Rs. 23,143. The proportion contributed by Government is less than in any of the five preceding years, while the increase in the local funds has been very considerably in excess of the rate of any year since 1872, if we exclude the year 1875, when the proportion stood at 27·82. There has been a very slight increase in the proportion which the interest on invested capital bore to the income. The total interest received has also been greater than in 1876. The percentage of subscriptions received from Europeans, it is to be remarked, was less than in any of the five preceding years. The decrease in the total amount of their subscriptions and donations was Rs. 2,954 in round numbers. The proportion of subscriptions and donations received from natives was almost the same as in 1876, but the total amount subscribed exceeded that contributed in 1876 by Rs. 8,173.

28. Looking at the dispensaries according to their annual income, we obtain the following classification. We shall compare the last two years. In

**1876 the largest number of dispensaries had an income of from Rs. 1,000 to Rs. 2,500, and so it was last year.**

### Statement No. 19.

*Classification of Dispensaries according to Income.*

| Number. | Income annually. | Number in 1877. | Number in 1876. |
|---|---|---|---|
| 1 | Under Rs. 250 ... ... ... ... ... ... ... ... ... | 3 | 1 |
| 2 | From " 250 to Rs. 500 ... ... ... ... ... ... ... | 13 | 12 |
| 3 | " " 500 " " 750 ... ... ... ... ... ... ... | 38 | 38 |
| 4 | " " 750 " " 1,000 ... ... ... ... ... ... ... | 42 | 42 |
| 5 | " " 1,000 " " 2,500 ... ... ... ... ... ... ... | 80 | 78 |

| 7 | " " 5,000 " " 7,500 ... ... ... ... ... ... ... | 8 | 8 |
| 8 | " " 7,500 " " 10,000 ... ... ... ... ... ... ... | 2 | 3 |
| 9 | " " 10,000 " " 25,000 ... ... ... ... .. ... .. | 2 | 3 |
| | Total ... | 224† | 223* |

* Daoodkandi included with Comillah.
† Ticari not included.

29. The next statement shows the proportion of income contributed by Government to different dispensaries. Last year the total income derived from Government was Rs. 1,44,495, and from private sources Rs. 2,77,175, against the corresponding items Rs. 1,86,139 and Rs. 2,54,489 in 1876. Of dispensaries receiving support from Government 19·6 per cent. have drawn more than half of their income from that source. In 1876 the proportion was 28·7 per cent.; in 1875, 37·4. Of dispensaries which drew less than half their income from Government, three were 80·4 per cent., against 71·3 in 1876 and 62·6 in 1875.

### Statement No. 20.

| | Number. | Total income. | | Average of each. | |
|---|---|---|---|---|---|
| | | Government. | Other sources. | Government. | Other sources. |
| | | Rs. | Rs. | | |
| Class 1, Dispensaries entirely supported by Government ... ... | *4 | 2,713 | ...... | 678·2 | ...... |
| " 2, Ditto deriving more than three-fourths of their income from Government. | 5 | 10,195 | 1,377 | 2039 | 275·4 |
| " 3, Ditto deriving more than one-half of their income from Government. | 35 | 47,315 | 31,702 | 1351·8 | 905·8 |
| " 4, Ditto deriving equal parts ... ... ... ... ... | 3 | 1,440 | 1,440 | 480 | 480 |
| " 5, Ditto deriving more than one-fourth of their income from Government. | 111 | 71,687 | 124,470 | 645·8 | 1121·3 |
| " 6, Ditto deriving less than one-fourth of their income from Government. | 46 | 11,145 | 80,184 | 242·3 | 1743·1 |
| " 7, Ditto deriving no income from Government ... ... | 20 | ...... | 38,002 | ...... | 1900·1 |
| Total ... | 224† | 144,495 | 277,175 | 645 | 1237·3 |

* Ungool, Bispar, Kurrulgachi, and Ekderoo.
† Ticari not included.

30. The cost of medicines, books, &c., supplied by Government ought to have been detailed in this place; but though the information has been applied for more than once, it has not been obtained up to the date of going to press.

31. The following abstract shows the amounts contributed by various municipalities to dispensaries; and so far as it is possible to do so, the contributions of last year are compared with those of the previous one. It will be observed that with few exceptions the contributions of 1877 exceeded, and in many instances greatly exceeded, those of 1876. More especially is this the case when it is considered that the contributions for 1877 consist of money

received from municipalities only, while the sums in the column for 1876 include contributions from local fund as well as municipalities:—

STATEMENT No. 21.

| No. | Names of dispensaries. | Amount in 1876. | Amount in 1877. | No. | Names of dispensaries. | Amount in 1876. | Amount in 1877. |

| 27 | Baraset ... ... .. ... | 253 | 385 | 60 | Meherpore ... .. ... ... | 100 | 100 |
| 28 | Sewan ... ... ... ... | 333 | 367 | 61 | Mymensingh ... ... ... ... | 75 | 60 |
| 29 | Burdwan ... ... ... ... | 240 | 360 | 62 | Jugdishpore ... ... .. . | 60 | 60 |
| 30 | Furreedpore ... ... ... ... | 120 | 360 | 63 | Bhoobooah ... ... ... ... | ...... | 50 |
| 31 | Mozufferpore ... ... ... ... | 350 | 340 | 64 | Azimgunge ... ... ... ... | 37 | 40 |
| 32 | Naihati • ... .. ... ... | 370 | 325 | 65 | Dehree ... ... ... ... | ... .. | 14 |
| 33 | Ranaghat ... ... ... ... | ... | 320 | 66 | Kishnaghur Town ... ... ... | 473 | 6 |

32. The amount deposited in Government securities and in Government savings banks in the year 1877 amounted to Rs. 17,096, against Rs. 16,342 in 1876, Rs. 6,100 in 1875, Rs. 9,337 in 1874, and Rs. 18,846 in 1873. The following dispensaries made investments of this description during the year:—Burawan, Berhampore, Dinagepore, Cuttack, Mymensingh, Noakholly, Revelgunge, Purneah, and Boda.

33. Regarding the monthly guaranteed subscriptions of each dispensary, and the total annual income from local sources, it will be found that 93, or 55·35 per cent., show an excess of realized over guaranteed income; 44, or 26·19 per cent., a deficiency; and in 31, or 18·45 per cent., the amounts were equal. The sum total of excess amounted to Rs. 44,950, and of deficiencies to Rs. 7,221. In 1876 and 1875 the figures were as follow:—

| | 1876. | 1875. |
|---|---|---|
| Show an excess of realized capital over guaranteed income ... ... | 79, or 51·3 per cent. | 56 |
| „ a deficiency ... .. ... | 53, or 34·4 „ „ | 30 |
| „ an equality ... ... ... | 22, or 14·3 „ „ | 19 |

34. On the 1st January the balance, including floating and invested capital, amounted to Rs. 7,95,594. The expenditure was in excess of income in three dispensaries, viz. Canning Town, in 24-Pergunnahs district, by Rs. 5; Rampore Haut, in Moorshedabad district, by Rs. 152; and Julpigoree by Rs. 2. The accounts of 36 dispensaries show no balance at the end of the year. The balances at the end of the year, including investments, vary from 14 annas and 6 pies in Dalal Bazar Dispensary to Rs. 1,76,077-14-8 in Dacca Dispensary. The mean balance to credit of each dispensary was Rs. 3,551-12-1.

35. The statement following shows expenditure under certain headings during the past six years. The total expenditure will thus be observed to have

steadily increased year by year, and so have the dispensaries increased in numbers annually:—

STATEMENT No. 22.

*Showing the Expenditure of 1877 and the five preceding years.*

| HEADS OF EXPENDITURE. | 1872. | 1873. | 1874. | 1875. | 1876. | 1877. |

| Surplus income invested ... .. .. .. | 3·92 | 5·92 | 2·81 | 1·69 | 4·35 | 4·26 |

* Includes cost of medicines and forms supplied from Government store free of charge.
† Includes both purchased and supplied free of cost from Government store.

Looking at statement No. 22 the proportions do not very materially vary except in the item of English medicines purchased. The cause of the difference in the figures between 1876 and 1877 is that in the former year the cost of medicines, forms, &c., supplied by Government free of charge was not included under this head. For medical officers, subordinates, and servants the rate was 58·31 in 1877, against 64·83 in 1876. The average cost of each diet during the past six years has been wonderfully uniform. The rates varied from 3 pies in the Goberdanga Dispensary to 3 annas and 10 pies in the Darjeeling Dispensary. All this will be seen in detail by referring to Table V.

36. Statement No. 23 shews the number of inspections of dispensaries made by Deputy Surgeons-General and Civil Surgeons during the year 1876. In 1876 there were 19 dispensaries which had not been visited during the year. In 1877 there were 16.

STATEMENT No. 23.

| CIRCLES. | Number of sudder dispensaries. | Number inspected by Deputy Surgeons-General. | Number of outlying dispensaries. | Number inspected by Deputy Surgeons-General. | Inspected by Civil Surgeons. Once. | Twice. | Thrice. | Four times. | Oftener. | Not inspected. |
|---|---|---|---|---|---|---|---|---|---|---|
| Presidency ... ... ... ... ... ... .. | 18 | 15 | 103 | 20 | 33 | 40 | 11 | 1 | 10 | 8 |
| Dacca .. ... .. ... .. .. . | 7 | 1 | 30 | 1 | 12 | 7 | 5 | 1 | 3 | 2 |
| Dinapore ... ... ... ... ... .. ... | 17 | 10 | 50 | 21 | 12 | 19 | 6 | 1 | 6 | 6 |
| Total ... ... | 42 | 26 | 183 | 42 | 57 | 66 | 22 | 3 | 19 | 16 |

37. In reference to the meetings of dispensary committees, I regret to have to record that in a large number of districts the members seem not to care for the institutions; and so far as my experience goes, the number of committees is very small indeed in which the members show an intelligent interest in the dispensaries which they are supposed to be set over. Where a committee meets regularly and goes into all details, especially at outlying stations away from the sudder, the benefit is great. It is therefore a pity that committees do not meet more regularly. The figures given below afford information relative to the meetings held during the year.

Committees assembled monthly in 9·78 per cent. of dispensaries: 11 times in ·89 per cent., 10 times in ·44 per cent., seven times in 2·22 per cent., six times in 1·78 per cent., five times in 3·55 per cent., four times in 5·78 per cent., three times in 11·11 per cent., twice in 13·78 per cent., and once in 15·55 per cent. Committees met occasionally in 1·33 per cent., and there were

either no meetings of the Committees or no record of them in 20 per cent., while there were no committees in 13·78 per cent. of dispensaries.

38. Statement No. 24 shows the number of cases of labour which were admitted during the year. There were 145 cases, against 188 in 1876. A midwifery ward was opened in the dispensary at Moorshedabad in 1870, and since then 117 women have been admitted, or on an average nearly 17 cases annually—not a large number, though large for this part of the country, in which women greatly object to come to a dispensary to be confined. This is not to be wondered at, seeing that they entertain the most extraordinary ideas of the English mode of delivery. A woman once told me that she had heard that the English practice was to perform the cæsarian section in all cases of delivery, and she consequently objected to go into a dispensary I wanted her to enter. Nor could I induce above a very few of the very poorest to come to the dispensary, even on a promise to pay them Rs. 5 if they did. Of the 117 cases of labour admitted into Moorshedabad Dispensary during the past eight years, only 10 proved fatal. At Hooghly there is a class of practical midwifery maintained from the Emambarah Fund, and instructed by the Assistant Surgeon; but as during the past year only three cases of labour were admitted, the instruction cannot be very practical one would imagine.

Looking at the statement for 1877 Arrah heads the list with 20 cases, then come Moorshedabad and Dacca with 16 each, and next Chittagong.

39. The value of Government medicines sold to the public in the year 1876 amounted to Rs. 6,539-7-2. In the following year the sum realized on the same account was Rs. 11,989-3-1. Eighty-nine pounds of sulphate of quinine were sold in 1876, against 160lb in 1877; but the quantity of mixed cinchona alkaloids sold in 1876 was only 3lb 5oz., of the value of Rs. 57-9, whereas in 1877 the sales amounted to 78½lb, of the value of Rs. 1,381-11-2. This I consider to be very satisfactory, and have no doubt that during the present year much more will be bought, seeing that the sale to the public of quinine has been forbidden, and the reputation of the Darjeeling mixed alkaloids is now more firmly established as a valuable remedy for the cure of malarious fevers. During the year under review the mixed alkaloids have been very extensively employed in all the dispensaries of Bengal, and while not tending to impair the efficiency of those institutions, its substitution to a considerable extent for the more expensive sulphate of quinine has greatly diminished the cost of medicines.

40. There was no doubt at one time a strong prejudice on the part of some medical officers against the use of the mixed alkaloids, which were said to give rise to nausea and vomiting, and to produce other effects that were probably owing to the doses in which the medicine was given being too large. That it does nauseate in some cases cannot be denied, and experiments are at present being tried in order to determine which of the constituents of the mixed alkaloids gives rise to these unpleasant effects. My own experience of the medicine confirms that of others who have made more extensive trials with it, viz. that it is a valuable, safe, and cheap remedy, sufficient to check most cases of ordinary malarious fever.

41. I see much to complain of in the way medicines and instruments are cared for in many dispensaries, which I shall not mention on the present occasion. In indenting for medicines it seems to be the custom of some native doctors in charge to enter in the column remaining in store that there is none, whereas the quantity last received may be untouched. I have very often found this, and Dr. Harvey, when Officiating Sanitary Officer of Bengal, has noted the same in his inspections of several dispensaries during the present year. In a case which came under notice only a short time ago, there were three years' supply of one or two articles, which stood on the shelves in the same phials in which they left the medical stores, and which had never been opened; yet in the indent which had just gone on "None in store" was returned against these same articles. If Civil Surgeons at their inspections were more careful, such irregularities could not go on from year to year undetected; and from the fact that the medicines are allowed to remain in the dispensary, it is evident that it is mere carelessness, and not fraud, which leads to the false indent being submitted.

The following copy of a letter which was recently received by me affords evidence, were such wanting, of the careless manner in which indents for medicines are often prepared :—

"In forwarding the accompanying indent I beg to inform you that I found a larger quantity of certain medicines, when taking stock, in store than was entered as 'remaining' last year: hence the discrepancy noticeable in the second last column."

42. That much of the medicine issued to dispensaries is abused and wasted or used for private practice I have not the slightest doubt, though I do not quite see how it is to be stopped. One thing, however, strikes me, viz. that if dispensaries had to pay for their own medicines Civil Surgeons and Committees would be forced to look more carefully after their expenditure, and I consider that it would be very fair that all dispensaries should pay for them in Bengal as they do in the Punjab. Another mode of arranging matters would be to fix for each dispensary a certain amount for which

they should receive credit in the books of the medical depôt. The indenting officer would indent for whatever he chose, but if the cost of the articles in his requisition should exceed the fixed sum, the dispensary committee should have to pay the difference. In the same way I consider that dispensaries should be made to pay for their instruments. If this was the order I feel convinced that there would be less shameful waste and destruction of such articles than there now is. At present the excessive quantities of some medicines asked for is astonishing. A few days ago I received an indent for medicines for the dispensaries of a certain district, in which 24lb of narcotine were asked for. Now, as the cost of the drug is Rs. 64 a pound, this single article would have cost Rs. 1,536. However, I struck out the whole quantity, and have no doubt that the dispensaries will get on very well without it. If the dispensaries of the district alluded to had been obliged to pay for their medicines, it is probable that narcotine would not have been included. In Lower Bengal indigenous medicines seem to be very little used, though many are of undoubted value in the cure of disease. I have tried to impress on all concerned that they must be more employed for the future, seeing that I have materially reduced the quantities of European drugs which have been hitherto allowed, and in doing so I have informed Superintendents of Dispensaries that if further supplies are required they may be had from the Government stores on chargeable indent, and must be paid for out of dispensary funds.

43. Before concluding I shall call attention to remarks which I deem worthy of notice, and which are contained in the forwarding letters of the district officers in reference to dispensaries. In a previous part of this report I alluded to the unsatisfactory state in which many of the dispensaries in the Hindustani-speaking parts of Bengal are at present in consequence of most of the hospital assistant class having been taken away and their places supplied by Bengali native doctors. To the same purpose Colonel Boddam, Deputy Commissioner of Hazareebagh, writes to the Commissioner of Chota Nagpore in his letter No. 171, of the 22nd February last:—"The removal of Mowla Bux, hospital assistant, although a gain to the native doctor, has been a great loss to the community. A glance over the reports of the hospitals will show that in three cases out of four the hospitals have been placed under the charge of Bengalis who do not know the language of the country, and whose English is also of the shadiest description. Let the district officer and residents exert themselves as they will, it is impossible to expect people to come and place themselves under the care of men who cannot understand what is said to them, and cannot make themselves understood. The Chattra charitable hospital is now built and placed on a firm footing, thanks to Moonshi Harihar Churn Lal, now Moonsif of Chattra; but until the native doctor in charge has learnt the language as spoken by the lower classes, it is hopeless to expect that there will be any large number of either in or out-patients. Echak is even worse off, for there is no one in the town who takes any active interest in the hospital, and the native doctor seldom or ever has an in-patient and but very few out-patients."

44. Everyone who has had any experience of dispensaries knows how hard it is to get money for their support, and how often persons who put down their names for certain sums never think of paying them. Mr. Park, Magistrate of Chupra, in alluding to these facts, says that monthly subscription is opposed to native ideas, and miserably small as is the sum some of the people are called on to pay, they will not part with it. He therefore proposes to adopt another mode of collection, viz. to endeavour to obtain one donation for the whole year. On the same subject Mr. Testro, Magistrate of Gya, writes, and as his remarks may give hints which will be useful in other districts, I shall here translate them from his letter to the Commissioner of Patna, No. 167½, of 4th February 1878:—"The necessity of realizing subscriptions promised to the hospital was by no means neglected during the year. One plan adopted may be described here. On the occasion of marriages and other festivals in the ranks of the well-to-do classes applications for licenses to carry arms are very commonly made, the number of guns and swords varying with the petitioner's idea of his own rank and dignity. In deciding on such

applications I have always taken into account the regularity or otherwise with which the petitioner has paid any subscriptions promised by him for public objects. When a petitioner presses upon me his pretensions to be considered a personage, I think it not unfair to inquire whether he has fulfilled the duties of the position he would be held to occupy. Perseverance in carrying out this plan will probably in time have a considerable effect on the income of the hospital."

The Magistrate of Dacca thought of suing subscribers to a dispensary in arrears who refused to pay up, but was advised by the Government Pleader that he could not.

45. I regret that there has been so much delay in submitting this report, although, as I said before, its non-submission is owing to circumstances over which I have no control.

I have the honor to be,

SIR,

Your most obedient servant,

JAMES IRVING, M.D.,

*Officiating Surgeon-General, Bengal.*

*P.S.*—Since the tables in this report were prepared, a memorandum of the cost of medical stores, instruments, and books has been received, which will be found printed as an appendix at the end of the tables.

W. H. D'C.—Reg. No. 8629—400—17-12-78.

# RESOLUTION.

MEDICAL.

*Dated Calcutta, the 4th February* 1879.

**READ—**

The Report by the Surgeon-General on the working of the Charitable Hospitals and Dispensaries in Bengal (excluding those in Calcutta and its Suburbs) for the year 1877.

**Read again—**

The Report for 1876, and the orders passed by Government thereon.

THE report under review, like its three immediate predecessors, has been submitted nearly twelve months after the close of the period of which it treats. Still it is rendered incomplete by the omission of the statistics of seventeen dispensaries. Much of the delay in the submission of these reports is said to arise from the practice under which the returns of each dispensary are transmitted to the Surgeon-General, not direct by the Civil Surgeon, but through the District Magistrate and the Commissioner of the Division. Though this might account, however, for some want of punctuality, it in no way explains the intolerable delays which have occurred. There are nine dispensaries in the Jessore district, yet no returns from them for the year 1877, had reached the Surgeon-General on the 18th December 1878. Returns are still wanting from three dispensaries in Durbhunga, including the sudder, out of four. The Lieutenant-Governor desires that a special report may be submitted at once in each of these cases. The Surgeon-General has recently proposed that the figured returns should be sent to him direct by the Civil Surgeons, the reports reaching him through the present channels, and this suggestion has the Lieutenant-Governor's approval. Under orders separately issued, the 30th of April has been fixed as the date on which the Surgeon-General's report should be submitted, and the Lieutenant-Governor desires that Government may be informed on 1st April of all cases in which the returns and reports have not then reached the Surgeon-General. The Lieutenant-Governor will then take such notice of cases of delay and neglect as shall prevent for the future such gross negligence as has occurred at Jessore and Durbhunga.

2. The statistical tables, Nos. II to V, appended to the present report, have been prepared in the forms prescribed by the Resolution of the Government of India, in the Home Department, No. 129, dated the 21st February 1877. Table No. I, showing the number of dispensaries of each class, has been given at paragraph 3 of the report, instead of in the appendix; but the principle on which dispensaries are classified has not been explained, as required by the orders quoted. There were 230 permanent hospitals and dispensaries in the interior of Bengal at the close of the year 1876. Three of these were closed, and 12 new dispensaries were established, during the year under report, at the close of which the number of dispensaries at work was 239. The increase in the number of these institutions during 1877 was thus 9, against 23 in the previous year. Of the total number of dispensaries in existence on 31st December 1877, 160 were under the rules of 1872, and the rest under the old rules. Twenty-two temporary dispensaries appear to have been opened during the year in the districts of Beerbhoom and Midnapore,—20 for the treatment of endemic fever and two for the treatment of cholera,—but most of them were closed before the end of the year.

3. Of the 225 dispensaries from which returns were received by the Surgeon-General, 140, or 62·2 per cent., admitted in-door patients, and the remaining 85, or 37·8 per cent., treated out-door patients only. In 1876, the number of hospitals which received in-patients was 146, or 65·17 per cent. of the 224 institutions from which returns were received; but, as it is known that some of the dispensaries from which no returns were received for 1877, habitually admit in-patients, the comparison is valueless. Two hundred and twenty-seven medical officers are shown to have been in charge of the dispensaries during 1877, of whom 54 were assistant surgeons; 8 hospital assistants of the military

class; and 163 native doctors. In 1876 there were 55 assistant surgeons, 24 hospital assistants, and 149 native doctors. It is represented that the small number of hospital assistants remaining in Bengal is insufficient for the requirements of the Hindustani-speaking districts, in which officers of this class are specially required. Hospital assistants of the Hindustani class are at present trained at the Patna Medical school. The great majority of these are required for service in the military department; but the Surgeon-General, Indian Medical Department, has recently intimated that no more medical pupils will be sent for education to that institution by his department. The question has, therefore, arisen whether the school should be kept up for training only civil hospital assistants of the Hindustani class, and, if it should be closed, whence a sufficient supply of this class of officers for Bengal could be obtained. The point is now under the consideration of the Committee on Medical Expenditure. It is said that of the 171 hospital assistants and native doctors in charge of dispensaries, 84 received extra pay for English qualification, and that nearly all the rest, though they had not passed the test examination, could keep their records in English. This is satisfactory, but it is to be regretted that many native doctors, after having earned extra pay by passing the requisite examination in English, do not evince any desire to keep up their knowledge of that language, and to improve their professional qualifications by the study of English medical works.

4. The number of in-door and out-door patients treated in the dispensaries, and the rate of mortality among the former class during 1877 and six preceding years, are shown below :—

| Year. | | In-patients treated. | Out-patients treated. | Total. | Percentage of mortality among in-patients. |
|---|---|---|---|---|---|
| 1871 | ... | 17,892 | 405,528 | 423,420 | 15·41 |
| 1872 | ... | 18,118 | 439,177 | 457,295 | 16·07 |
| 1873 | ... | 20,240 | 598,470 | 618,710 | 16·22 |
| 1874 | ... | 23,842 | 636,289 | 660,131 | 16·84 |
| 1875 | ... | 22,009 | 698,730 | 720,739 | 16·89 |
| 1876 | ... | 23,012 | 809,275 | 832,287 | 16·81 |
| 1877 | ... | 23,109 | 810,145 | 833,254 | 17·38 |

The figures show a steady increase every year in the number of out-patients and in the total number of patients treated. The number of in-patients also has steadily increased, if the year 1874 is excluded. The number of in-patients and of out-patients in 1877 exceeded the corresponding numbers of the previous year by only 97 and 870 respectively. The increase, however, would have been greater had not the statistics of so many as 17 dispensaries been excluded from the figures of 1877. The rate of mortality, which varied but slightly during the seven years was highest in 1877. The average death-rate of this septennial period was 16·51. The figures, however, are not considered by the Surgeon-General to be trustworthy.

5. The total reported number of persons who applied for medical relief at the permanent hospitals and dispensaries both in Calcutta and in the interior of Bengal was 1,158,816, or 16,513 in excess of the number treated in the previous year. But there was a decrease of 85,493 in the number treated in the endemic fever dispensaries in the Burdwan Division. This is satisfactory, as affording evidence of a great diminution in the prevalence of malarious fever in that division. The ratio of the total number treated in the permanent hospitals and dispensaries in Bengal to the population was 1·91 per cent. in 1877, against 1·88 in the previous year. The percentages of male and female adults and of children treated in the mofussil dispensaries during 1877 were nearly the same as in the preceding year, being 60 9, 20·4, and 18·7 in the former, against 61·3, 20·8, and 17·8 respectively in the latter period. There was also but little variation in the relative proportion of patients of different castes and persuasions in the two years.

6. The principal diseases among the patients treated in the mofussil dispensaries during 1877 were fevers, goitre, enlarged spleen, skin diseases, rheumatism and ulcers. Compared with the previous year, there was a slight increase in the proportion of patients suffering from fever, spleen diseases and small-pox, and a decrease in the proportion of cases of cholera, rheumatism and goitre. The statistics of goitre are very remarkable. It is clear that the disease is much more common in the tracts which lie immediately at the

foot of the Himalayas than elsewhere; but the extraordinary variations shown by the returns of adjoining districts in these tracts require explanation. Thus in Rungpore 12,642 persons were treated against 26 in Dinagepore and 101 in Julpigoree. In Chumparun the returns show 11,700 and in Mozufferpore 10,221, while further east Durbhunga, Bhagulpore, and Purneah, all districts which include parts of the Terai, had only 1,138, 1,460, and 2,184 cases under treatment respectively. It is true that the returns of three out of four of the Durbhunga dispensaries are wanting, but that of which the figures are available, is situated in the tract adjacent to the Terai, and it is very improbable that the number treated in the others were on even so high a scale as this. Mymensingh had 2,751 cases against three in Tipperah, and Dacca 1,458 against 13 in Furreedpore. If these figures really represent differences in the distribution of this affection, the subject requires attention at the hands of the Sanitary Commissioner. If, however, they represent different degrees of popularity in the dispensaries, the Surgeon-General should ascertain the causes.

7. Of the in-door patients treated during 1877, 67·28 per cent. were cured or relieved, 17·38 per cent. died, and 15·33 per cent. are returned as otherwise accounted for. The corresponding figures of the previous year were 68·36, 16·81, and 14·82 respectively. The percentage of recoveries was highest in the Dinapore Circle, while that of deaths was greatest in the Presidency Circle, in both years as well as in 1875. The death-rate of individual dispensaries varied considerably in different districts. As in 1876, the Goalundo Dispensary stands conspicuous for the highest death-rate. The mortality here was 54·78 per cent.; at Barrackpore it was 54·76 per cent.; and at Meherpore 50 per cent. In ten other dispensaries the death-rate was more than 30 per cent. As in previous years, the diseases which caused the largest number of deaths among in-patients were dysentery, diarrhœa, cholera, and fever. The percentages of deaths from these diseases were 26·77, 11·58, 13·87, and 8·29 respectively, against 22·25, 10 73, 20·65, and 7·60 in 1876. The mortality from dysentery, diarrhœa, and fever was therefore greater, while that from cholera was considerably less than in the previous year.

8. Two thousand three hundred and one major, and 37,908 minor operations are reported to have been performed during 1877, against 2,400 major and 37,929 minor operations during the previous year. The greatest number of major operations were performed in the dispensaries at Monghyr, Dacca, Dinapore, Mozufferpore, Moorshedabad, and Patna. It should be remarked, however, that 155 cases out of 212 in Monghyr, 43 out of 104 in Dacca, and 48 out of 64 in Moorshedabad were simply operations on abscesses, which under the existing classification are shown as major operations. Of the patients on whom the major operations were performed, 83 4 per cent. were cured or relieved, while 4 per cent. died against 3 in 1876. Of these, 472 or 20·5 per cent. operations were performed by the Superintendents of Dispensaries, against 14·2 per cent. in the previous year. In Monghyr, the Superintendent only performed 12 out of 212, and in the Mozufferpore, Moorshedabad, Patna, and Bankipore dispensaries he performed none. It appears that these are not isolated instances. This is much to be regretted. The Surgeon-General justly remarks that the natives of this country have much greater confidence in European surgery than in the European system of medicine. Some medical officers, no doubt take more interest in the duties of a physician than in those of a surgeon, but it is to be regretted that by a neglect of surgery, they should lose one great means of obtaining the confidence of the people.

9. The total income of the dispensaries, exclusive of the floating balance and the cost of medicines, forms and registers supplied by Government, is shown to have been Rs. 4,00,160, which is greater than the corresponding figure of any of the preceding five years. Of this amount, 30·73 per cent. was paid by Government; 32·25 per cent. was contributed by native subscribers, and 5·54 per cent. by Europeans; 6 per cent. was realized from interest on invested funds; 7·27 per cent. was contributed by municipalities; and 18·20 per cent. was derived from other local sources. The proportion of native subscriptions was greater, while that of European subscriptions, and the share of the Government contribution were less than in any of the preceding five years. Compared with 1876, there was some increase in the proportion of the income derived

from interest on investments, and of the total receipts from local funds, but there was a decrease in that of municipal contributions. The cost of medicines, instruments, books and forms supplied by Government during 1877-78 appears to have been Rs. 72,056, against Rs. 63,615 in 1876. The amount invested in Government securities and deposited in Government savings banks in the year 1877 was Rs. 17,096, against Rs. 16,342 in the previous year.

10. The guaranteed amount of subscriptions was not fully realized in 44 dispensaries, against 53 in 1876 and 30 in 1875. It is said that shortly after a dispensary is opened, its founders take little interest in its maintenance, and do not pay their subscriptions with any regularity. The Surgeon-General suggests that in future, before the establishment of a dispensary is sanctioned, the projectors may be required to guarantee its maintenance for a certain number of years, and deposit a certain sum which will secure an adequate income monthly. The Lieutenant-Governor observes that, at present, the person or persons desiring the establishment of a dispensary have to execute a bond, guaranteeing that, in case the local subscriptions do not come up to a certain fixed sum, they will make good the deficiency. If the guarantors do not fulfil their obligation, the penal provision of the bond should of course be enforced. The Commissioners will be requested to warn all defaulters accordingly.

11. The total expenditure during the year, including that of medicines, forms, &c., supplied by Government, free of cost, amounted to Rs. 4,00,295. In the three dispensaries at Canning, Rampore Haut and Julpigoree, the expenditure is shown to have exceeded the income, 36 dispensaries show no balance at the end of the year, and the rest a surplus balance. The Mitford hospital at Dacca shows the largest balance, which amounts to more than 1,75,000 rupees, including investments. The average cost of each diet, which amounted to one anna and five pies, was nearly the same as in previous years.

12. Out of 121 dispensaries in the Presidency circle, 35 were inspected by the Deputy Surgeon-General, as in the previous year. The Deputy Surgeon-General of the Dinapore circle inspected 31 dispensaries, against 44 in 1876, while the Deputy Surgeon-General of the Dacca circle, in which there were 37 dispensaries, inspected only two, against six in the previous year. The Civil Surgeons inspected 22 dispensaries four times or oftener, as many three times, 66 twice, and 57 once during the year. The result is more unsatisfactory than that of the previous year; and the Lieutenant-Governor regrets that it is so notwithstanding that attention was drawn to the subject in the Resolution on the report for that year. The Surgeon-General should impress on the Civil Surgeons the great importance of their inspecting duty, and insist on their visiting each dispensary under their superintendence at least twice a year, as required by the existing rules.

13. As in previous years, the Committees of most dispensaries appear to have taken little or no interest in the welfare of those institutions. It is reported that in only 9·78 per cent. of the dispensaries, the Committees met once a month, as required by the rules; in ·89 per cent they assembled eleven times; in ·44 per cent ten times; in 2·22 per cent. seven times; in 1·78 per cent. six times; in 3·55 per cent. five times; in 5·78 per cent four times; in 11·11 per cent. three times; in 18·78 per cent. twice; and in 15·55 per cent. once during the year. If the Magistrates and Civil Surgeons were to interest themselves more in this matter, an improvement could doubtless be effected.

14. The Surgeon-General's remarks in regard to the waste of medicines in dispensaries, and to the careless manner in which indents for them are at present prepared, will be communicated to the Committee on Medical Expenditure, who have now under their consideration, the whole question of the management of the dispensaries in the interior of Bengal, and the nature of aid which they should in future receive from Government.

ORDER—Ordered that a copy of this resolution be forwarded to the Surgeon-General, for information and guidance, and to all Commissioners of Divisions, for information and communication to district officers.

Ordered, also, that a copy of the resolution, together with a copy of the report, be forwarded to the Inspector-General of Jails, and the Sanitary Commissioner, for information.

Ordered, also, that a copy of the resolution, together with a copy of the report, be forwarded to each Member of the Committee on Medical Expenditure, for information.

Ordered, also, that a copy of the resolution, together with a copy of the report, be submitted to the Government of India, in the Home Department, for information.

By order of the Lieutenant-Governor of Bengal,

COLMAN MACAULAY,

*Offg. Secretary to the Govt. of Bengal.*

# REPORT

ON THE

# CHARITABLE DISPENSARIES

UNDER THE

# GOVERNMENT OF BENGAL

FOR THE YEAR

# 1878.

BY

JAMES IRVING, Esq., M.D.,
Officiating Surgeon-General of Bengal.

Calcutta:
PRINTED AT THE BENGAL SECRETARIAT PRESS.
1879.

No. 687BG.

FROM JAMES IRVING, ESQ., M.D.,

*Surgeon-General, Bengal,*

TO THE SECRETARY TO THE GOVERNMENT OF BENGAL,

JUDICIAL, POLITICAL, AND APPOINTMENT DEPARTMENTS.

*Dated Darjeeling, the 9th June* 1879.

SIR,

I HAVE the honor to forward the Annual Report on the Dispensaries of Bengal for the year 1878. I have been prevented sending it sooner, waiting for an account of the medicines and instruments used. I applied to the Examiner of Medical Accounts; the Comptroller, Military Pay Department; and the Accountant-General of Bengal. On the 28th ultimo the latter sent me a memorandum of the accounts for the first half of 1878-79 and the latter half of 1877-78, which, however, does not seem to be complete, and is not therefore reproduced. I have, however, deemed it advisable to wait no longer in submitting the report, although Mr. Westland offered to give me any further information he could.

I have the honor to be,

SIR,

Your most obedient servant,

JAMES IRVING, M.D.,

*Surgeon-General, Bengal.*

# Report on the Charitable Dispensaries

UNDER THE

## GOVERNMENT OF BENGAL,

### FOR THE YEAR 1878.

No. 688BG.

FROM THE SURGEON-GENERAL FOR BENGAL,

TO THE SECRETARY TO THE GOVERNMENT OF BENGAL,
JUDICIAL DEPARTMENT.

*Dated Calcutta, the 9th June* 1879.

SIR,

I HAVE the honor to submit the report on the Charitable Dispensaries of Bengal for the year 1878. Comparing the year with the previous one, there has been an addition of seven dispensaries during 1878, as appears from the following abstract:—

TABLE No. 1.

| | |
|---|---|
| Remained open, 31st December 1877 ... ... ... | 239 |
| Established during the year 1878 ... ... ... | 10 |
| Total ... | 249 |
| Abolished or closed ... ... ... ... | 5* |
| Remaining, 31st December 1878 ... ... ... | 244 |

* Includes Chowghoria dispensary, which was not shown in 1877 as closed, and Hiranpore dispensary, which is temporarily closed.

NOTE.—Returns and reports have not been received from Ramchunderpore, Naraya, and Muktagatcha dispensaries which were not in full working order during the year.

The dispensaries closed were—

(1). Tajpore dispensary, class III, grade 3, which had been opened on the 1st of April and was closed on the 15th of August 1878.

(2). Synthia dispensary, class III, grade 3, was opened on the 23rd June 1877 and closed on the 1st of June 1878.

(3). Doolye dispensary, class II, was opened in the month of July 1867 and closed on the 18th of May 1878.

2. The table which follows contains particulars of the dispensaries opened during the year :—

TABLE No. 2.

| Locality. | District. | Class. | Number and date of Government orders sanctioning their establishment. | Guaranteed monthly income. | REMARKS. |
|---|---|---|---|---|---|
| | | | | Rs. | |
| Latudaha ... ... | Nuddea ... | Class III, grade I | No. 1254 of 23rd March 1878 | 120 | |
| Ramchunderpore ... | Tipperah ... | Class I ... | " 2521 " 13th July " | 100 | |
| Naraya ... ... | Durbhunga ... | Class II ... | " 2166 " 8th June " | 160 | |
| Bongong ... ... | Nuddea ... | Rule VII ... | " 634 " 14th February " | 15 | |
| Boinchee ... ... | Hooghly ... | Class I ... | " 681 " 15th " " | 228 | |
| Pawsey (Muktagacha)... | Mymensingh ... | Class III,gradeIII | " 365T " 6th Oct. " | 45 | Interest of Rs. 12,000 invested for the support of the dispensary. |
| Datoon ... ... | Midnapore ... | Ditto ... | " 179 " 9th Jan. " | 40 | |
| Tajpore ... ... | Burdwan ... | Ditto ... | " 130 " 8th " " | ...... | Not stated. |
| Kookoormari ... ... | Bogra ... | Class II ... | " 1464 " 12th April 1877 | 60 | |
| Narail ... ... | Jessore ... | Class III,grade III | " 4044 " 28th Dec. " | 40 | |

NOTE.—The last two dispensaries not being included in the list of new dispensaries in last year's report, are taken as new dispensaries in this year. The information as to new dispensaries opened in 1877, was received from the Surgeon-General's office, Indian Medical Department, and these were not in the list thus obtained.

3. On the 31st December 1878 there were open 33 main, 34 branch, and 11 sub-divisional dispensaries, or 78 dispensaries which had not been classified and graded under the Bengal Dispensary Rules of 1872. Of classified institutions there were 16 belonging to class I, or which are supported entirely by private individuals, English medicines being supplied at cost price. Class II includes dispensaries in wealthy neighbourhoods, and such as have large endowments, to which Government grants medicines and instruments free of cost. The dispensary pays the salary of the medical officer. Of this class there were 14. Class III, grade I, includes 23 dispensaries whose guaranteed local income is not less than Rs. 120. They are in charge of an assistant surgeon to whom Government pays half his minimum salary. Medicines and instruments are given free of cost to all dispensaries of class III. There are 26 dispensaries under class III, grade II. Of these, the guaranteed local income is not less than Rs. 60 and not above Rs. 120. To these Government allows a civil hospital assistant on not less than the minimum of Rs. 50, of which Government pays a half. Under class III, grade III, there were 72 dispensaries on the 31st December 1878. Such dispensaries have a guaranteed local income of not less than Rs. 40 and not above Rs. 60. Government contributes half of the minimum of the civil hospital assistant's pay, or Rs. 15. There is yet another set of dispensaries, or those which are said to be instituted under Rule VII of the Dispensary Rules. Of these there were 15 on the last day of the year. These institutions exist at sub-divisional head-quarters where there is no regular dispensary, but where a sum of not less than Rs. 15 a month can be raised by local subscriptions for providing the necessary establishment, bazar medicines, &c. Government grants Rs. 10 as an extra allowance to the sub divisional hospital assistant for doing the dispensary work.

4. The only temporary or epidemic dispensaries which were established during the year were as follow :—one at Elambazar in the Beerbhoom district, at which 138 cases of fever were treated, and which was opened on the 28th December 1878. In the Midnapore district there were six temporary dispenaries in existence during the year, as shown in the following return received from the Civil Surgeon Dr. Gilligan.

| ENDEMIC FEVER DISPENSARIES. | Number of persons treated. | REMARKS. |
|---|---|---|
| 1. Srimuntopore ... ... ... ... ... | 718 | Closed 7th February 1878. |
| 2. Putterghata ... ... ... ... ... | 251 | " 12th January " |

There were no fever dispensaries in Burdwan district, although until 1876 they had abounded, and none in Nuddea district.

5. Of the 243 dispensaries from which returns have been received, 154 admitted both house and out-door patients, or 63·37 per cent. At 89 dispensaries only out-door patients were treated. Looking at the following statement, we see that the annual number of house patients ranged from under 25 in twenty-eight dispensaries to upwards of 1,000 in three. Of out-door patients, three dispensaries had from 250 to 500, and 12 upwards of 10,000.

NOTE.—Includes Tajpore, which is now closed, and Doolye, separate return from which was received in 1878 for the first time, formerly it being included with Comillah.

6. The dispensaries have been in charge of assistant surgeons and civil hospital assistants, into which latter rank have been merged the previously existing grades of military class hospital assistants, apothecary, and vernacular licentiate class native doctors, and locally entertained native doctors who before were in charge of the civil duties of the province. This change has been effected under Bengal Government orders conveyed in a letter No. 229, dated 13th January 1879.

7. I cannot report more favourably of many of the civil hospital class than I did last year. I should have no difficulty in mentioning many who are now in charge of dispensaries, and who are in every way unfit for such a position. It was unfavourable that the military hospital assistants had to be withdrawn from civil duties so abruptly in consequence of the Madras and Mysore famine, as it was in consequence of this that men without training or experience had to be thrust into independent charges. Had they had the opportunity of doing duty under a European medical officer in a jail or police hospital in order to be taught their work, they might have turned out very differently. It still remains true, as I reported last year, that the best of the men leaving the Campbell Medical School will not accept employment under Government. Referring to the hospital assistants of dispensaries in the 24-Pergunnahs, Dr. Harvey writes—

"The qualifications of the majority of the native doctors are decidedly mediocre, and few, if any, of them are really fit to hold independent charges, although I have no reason to believe that they are less well qualified than

those in other districts in Bengal. They are certainly less well qualified than the men educated at the up-country schools. None of those I have seen could be trusted to perform any major operation, or to diagnose accurately any uncommon cases. Few of them, I fear, are able to perform efficiently such commonplace operations as cupping and tooth-drawing."

Mr. Warden, Officiating Civil Surgeon of Bhagulpore, in one of his inspection reports, writes regarding one of the civil hospital assistants under him in the following terms:—

"The native doctor does not know how to use a stomach-pump or thread a tourniquet. He informs me that the normal human temperature is 75°, and that in disease he has often seen it rise to 112° and 120°."

The ignorance of many medical subordinates in charge of sub-divisions is lamentable, when it is recollected that their opinions have often to be taken in medico-legal cases. In a recent trial regarding a woman who was killed by having an iron instrument forcibly thrust into her womb through the vagina giving rise to fatal internal wounds, a civil hospital assistant declared that the injuries found might be the consequence of copulation, those which he detected in the womb being frequently thus caused.

The following quotation affords another instance of carelessness or ignorance which happened in the same district.

"It appears that a police case was sent to the hospital assistant of Banka. The hospital assistant after examination was of opinion that the patient was not dangerously injured, and he was accordingly allowed to go home. A few days afterwards the man died, and the body was sent to the sudder station for *post-mortem* examination. Fracture of several ribs was detected, together with acute pleurisy. I attributed the death accordingly to pleurisy from irritation of fractured ribs. The question arises—how is it that the fracture of the ribs was not detected by the native doctor when he examined the patient?"

Surgeon Warden, who writes the above, says that the hospital assistant referred to bears a good character and has hitherto conducted his duties to his satisfaction. As a specimen of the extraordinary medico-legal reports which are occasionally submitted by Bengali civil hospital ssistants, I copy the following *verbatim et literatim*.

"At or about 9 A.M. of the 21st October 1877 I held a *post-mortem* examination on the carcass of Mussamut Sooknea, a female aged about 30 years, and found her body damnably swelled and entirely decomposed. Superficial skin of some part of the body was also rotten, utras enlarged, and a sign of ulcer like that of placenter separation was found in it (utras). Moreover mouth of the utras was seen open, and so is the vagina canal, and also extended. Stomach empty, with one or two little ulcers in it.

"*Opinion.*—Regarding my opinion as to the cause of death in this case, I can say nothing particularly about it, as the body was brought in here four or five days after the death, which caused the body entirely decomposed or rather unfit for *post-mortem* examination; but so far I can say from the symptoms that are ascertain, as mentioned above, that the death might have probably been caused from abortion."

The assistant surgeons who were employed under the Government of Bengal during the past year in charge of dispensaries have, as a general rule, proved all that could be desired. Among their number are some who would do credit to any service as able physicians or skilful surgeons and operators.

8. I rather think that the order which allows only Rs. 10 a month to a civil hospital assistant in Bengal, so long as he is supernumerary, prevents many from applying to enter the service. Supernumeraries drawing Rs. 10 a month have to do duty in districts away from their homes; and, if sent out into the interior on epidemic cholera or fever duty, they draw a very small amount of travelling allowance and Rs. 20 a month as pay but I am told; that frequently the travelling allowance which they draw for their journeys when on duty does not anything like cover their expenses.

9. In 1877, 84 of the present civil hospital assistant class connected with dispensaries drew increased pay on account of possessing a knowledge of

English, and many others, though not up to the standard, knew the language so as to be able to keep their returns and write their registers by means of it. In 1878 there were 78 who had English qualification, for which they drew Rs. 5 extra. In order to secure that, there is uniformity in the questions set for the English examination of civil hospital assistants, I have directed that these examinations are to take place only twice a year—on the 15th April and 15th October. On the names of the candidates reaching me, sealed papers are sent to the medical officer under whom they are serving, and he opens them before the civil hospital assistants whom he proceeds to examine. The working of the sums in arithmetic, the writing to dictation, and the civil surgeon's estimate of the result of the examination is sent to me, when I decide whether the candidate has passed or not. On the 15th April 1879, 28 civil hospital assistants were examined, of whom only eight passed.

The rate of pay drawn by civil hospital assistants in charge of dispensaries during 1878 has been as follows:—

One drew Rs. 75, two Rs. 70, 15 Rs. 60, one Rs. 55, 27 Rs. 50, 51 Rs. 40, and 86 Rs. 35 and under.

10. The total admissions of house-patients during the year under review have been 27,720, which, according to the table below, is an increase of 4,611 on 1877. There were 893,532 out-door patients in 1878, and by the table 810,145 in 1877, or an increase of 83,387. It may be mentioned that the annual report for 1877 did not contain returns from certain dispensaries which are named in paragraph 4 of the report. They were, however, subsequently received, and in order to make an exact comparison between the two years, I give the correct figures below:—

| | | | |
|---|---|---|---|
| House-patients treated in 1877 ... ... ... | 23,853 | Increase in 1878 | ... 3,867; |
| Ditto ditto „ 1878 ... ... ... | 27,720 | | |
| Out-door ditto „ 1877 ... ... ... | 850,411 | Ditto „ 1878 | ... 43,121; |
| Ditto. ditto „ 1878 ... ... ... | 893,532 | | |

so that the numbers in 1878 were greater by 3,867 house-patients and 43,121 out-door patients than in 1877.

The statement which follows gives the admissions and death-rate for the past eight years, and it will be observed how steadily year after year the numbers have increased:—

TABLE No. 5.

| | In-patients treated. | Out-patients treated. | Total. | Mortality among in-patients, per cent. |
|---|---|---|---|---|
| 1871 ... ... ... ... ... ... ... ... | 17,893 | 404,528 | 423,420 | 15·41 |
| 1872 ... ... ... ... ... ... ... ... | 18,118 | 439,177 | 457,295 | 16·07 |
| 1873 ... ... ... ... ... ... ... ... | 20,240 | 598,470 | 618,710 | 16·22 |
| 1874 ... ... ... ... ... ... ... ... | 32,842 | 636,289 | 660,131 | 16·84 |
| 1875 ... ... ... ... ... ... ... ... | 22,009 | 698,730 | 720,739 | 16·89 |
| 1876 ... ... ... ... ... ... ... ... | 23,012 | 809,275 | 832,287 | 16·81 |
| 1877 ... ... ... ... ... ... ... ... | 23,109 | 810,145 | 833,254 | 17·38 |
| 1878 ... ... ... ... ... ... ... ... | 27,720 | 893,532 | 921,252 | 20·22 |

The average death-rate of the last eight years is 16·98.

11. The total amount of medical aid afforded to the people of Bengal by means of Government aid, not only in Calcutta, but also in the hospitals and dispensaries of Calcutta and its suburbs, is exhibited below:—

TABLE No 6.

| | 1877. | | 1878. | |
|---|---|---|---|---|
| | Number. | Patients treated. | Number. | Patients treated. |
| Calcutta hospitals and dispensaries ... ... ... | 10 | 325,562 | 10 | 321,486 |

* No return received.

13. My next statement shows the sex of the patients treated in the dispensaries, and it is curious to note, on comparing the results of the last three years, how little the proportions have altered.

TABLE No. 8.

*Sex of Patients treated.*

| | 1876. | 1877. | 1878. |
|---|---|---|---|
| Males | 61·33 | 60·86 | 60·46 |
| Females | 20·83 | 20·38 | 19·57 |
| Children | 17·83 | 18·76 | 19·96 |

14. The following table, exhibiting the nationality or caste of those treated, shows that, as in the case of sex, the proportions remain very nearly the same year after year :—

TABLE No. 9.

*Nationality of Patients treated both in and out.*

| Year. | Europeans. | Eurasians. | Mahomedans. | Hindus. | Others. |
|---|---|---|---|---|---|
| 1878 | ·11 | ·39 | 31·44 | 66·29 | 1·76 |
| 1877 | ·13 | ·36 | 32·96 | 65·10 | 1·45 |
| 1876 | ·13 | ·32 | 33·53 | 64·74 | 1·26 |

15. Among in-door patients treated in all the dispensaries of Bengal in 1878, 65·37 per cent. were cured and relieved, 14·4 per cent. absconded, were removed, or were to be otherwise accounted for, and 20·22 per cent. died.

The average daily attendance of out-door patients was 33·72, and the average daily number of house-patients 7·75.

16. The dispensaries in which the mortality has been greatest are exhibited in the following statement. The rates of mortality have varied from 83·33 per cent. of those treated in Magoora dispensary to 14·02 in Furreedpore. In several instances the numbers are so small that the proportion cannot be accurate.

TABLE No. 10.

*Showing the highest death-rates in the Dispensaries in each Circle.*

*N.B.*—The cases remaining on the 1st January 1878 are included in this table.

18. The subsequent statement shows the number of cases of leprosy and goitre treated, and the percentage of the whole number of cases. There were 2,669 cases of leprosy, or ·29 per cent. The year before there were 2,791 cases, or ·37 per cent. Of goitre there were 65,401 cases, or 7·10 per cent. of the total number of all of the diseases treated during the year:—

19. In the Resolution on the annual report on the dispensaries for 1877 some remarks were made on the comparative prevalence of goitre in adjoining districts. The disease, it was said, prevails in districts close to the foot of the hills, but the "extraordinary variations (it was added) in these tracts require explanation. Thus in Rungpore 12,642 persons were treated, against 26 in Dinagepore and 101 in Julpigoree." As bearing on this subject, I make an interesting quotation from the annual report of Surgeon-Major Mathews, Civil Surgeon of Mozufferpore:—

"A large number of goitre cases were treated. The people of certain quarters of the district have great faith in the efficacy of biniodide of mercury ointment.

"In these cases, where there is simple hypertrophy of the gland structure, and in the early stages of the disease, the benefit of the treatment is beyond doubt. Cystic goitre, *i.e.*, when the enlargement of the gland is complicated with the formation of cysts, the gland grows to an enormous size, becoming hard and nodulated, is not benefited by the ointment to any perceptable extent.

"Unfortunately a large number of cases that come for treatment are of this description, and I am not aware of any local application by which they can be cured.

"The variety known as exophthalmic goitre is not often observed. I have seen many hundreds of cases during the past year, but I have not yet seen the disease.

"The popular impression is that drinking water is the principal cause of goitre; but nothing like definite information in support of this supposition is forthcoming.

"You hear constantly of people living in a village, or a group of villages, who obtain drinking water from certain wells, are all afflicted with the disease, and that the residents of other villages in the immediate vicinity, but who use different wells, are not so afflicted. Again, villagers living on the river bank, from whence they procure drinking water, are reported to be exempt from the complaint; and, on the other hand, you will be assured that the use of river water will inevitably produce the disease, and last of all that the water of certain wells will cure it.

"The whole subject requires investigation, and I have little doubt that an officer with time at his disposal would be able to throw some light on the etiology of goitre."

20. The passage I have quoted from Dr. Mathews' report thus shows that people may live close to each other, while some will be affected with the disease and others not so. But the fact is that little or nothing is known as to the cause of the disease, which is variously ascribed to drinking snow water or water impregnated with calcareous or earthy particles, or to living in damp places imperfectly drained. The subject therefore is well worthy of study. That the Sanitary Commissioner, however, with all his other duties to attend to, would have leisure to enter into the investigation, as suggested in the resolution above quoted, with any probability of being able to clear up the very obscure history of the disease, I very much doubt; though I consider that it would be most desirable to depute a specially qualified medical officer to prosecute the enquiry which would probably last for many months. It will be observed that the districts in which most cases of goitre were treated are Mozufferpore (14,537), Sarun (13,245), Chumparun (10,044), Rungpore (10,520), Durbhunga (6,222), Purneah (2,735), Mymensingh (2,113), Bhagulpore (1,556), and Dacca (1,490). Dr. Meadows mentions that the remedy which has proved so effectual in the cure of goitre, viz. an ointment of biniodide of mercury, is now sold in the bazar at Motihari and is extensively bought by the people when they come to market.

21. Looking to Statements Nos. IIIA and IIIB* at the end of the report, we find that, during the past year, 2,791 major operations took place with a mortality of 115. During the previous year there were 2,301, so that there has been an increase of 490 cases in 1878. There were 46,179 minor operations in 1878 against 37,908 in 1877. In the table, Monghyr again heads the list

* According to the form given in Government of India, Home Department's Resolution No. 129 of 21st February 1877, there is only one statement of operations. I have given two, in order to show those performed by civil surgeons and those by medical subordinates.

with 416 major operations; but of these 322 were cases of abscess, 33 cases of stone, 12 of extraction of lens for cataract, 8 removals of tumours, and 41 of tapping of the abdomen. Most of these operations are trifling. Dacca shows 176 operations of a very different sort, as will appear from the following examples:—Extraction of lens 5, excision of eyeball 2, removal of necrosed bones 9, vesico-vaginal fistula 2, amputations of various members 23, lithotomy 13, elephantiasis scroti 5. In Mozufferpore dispensary there were 105 important operations, including removal of necrosed bones 10, amputations 3, removal of tumours 20, of cancer 1. At Dinapore dispensary 95 cases were operated on, such as iridectomy 3, extraction of the lens for cataract 15, excision of eyeball 2, ligature of arteries 2, excision of necrosed bone 1, removal of tumours 6, lithotomy 4. In Bankipore dispensary 25 cases of cataract were operated on; there were besides 7 cases of lithotomy, 2 of urethrotomy, and of herniotomy 3. In Patna City dispensary there were 59 operations, including 14 cases of lithotomy and no deaths, 8 operations for cataract, besides other important operations.

22. It seems to me that the table of operations should be revised, as the terms major and minor, as at present applied, and as ordered to be applied by the Government of India, Home Department's Resolution No. 129 of the 21st February 1877, are very misleading. In the table of operations from Monghyr dispensary last year, there were included, as I have said, among major operations 322 cases of abscess with no deaths. It is clear, therefore, that in these cases there can have been no "danger to life," which apparently constitutes the difference between major and minor. Then I should not think the amputation of a finger a major operation, nor the reduction of a dislocation, nor the treatment of a simple fracture.

23. In my report for the year 1877, I alluded to the small amount of surgery shown in the Bengal dispensary returns. I cannot myself account for it, nor has any one been able to explain to me why there is so little practical surgery in Bengal. For example, I find from the annual report of the dispensaries in the North-Western Provinces for the year 1877 that there were 76,596 operations, while in Bengal for the same year there were only 41,687. Unless the civil surgeon himself is a zealous surgeon, the operations at a given dispensary will never be numerous, and it will be seen from a return which I submit that some civil medical officers have never operated once all last year. This, no doubt, is one reason why there are few operations. In fact, during 1878 there were fewer operations performed by civil surgeons than the previous year, as there were 452 in 1877 and only 426 in 1878. So long as this is the case, matters are not likely to improve.

24. The financial condition of every dispensary is detailed in Table V at the end of this report, and beneath will be found an abstract of the whole. The statement of income is again incomplete for want of estimated cost of medcines, registers, and forms which I have made many vain attempts in various quarters to obtain. The most obvious way to prevent a recurrence of this would be to arrange that all invoices of medicines, &c., sent out from the Medical Stores to dispensaries should be priced as they would be if issued from a druggist's shop. The average income of each dispensary, taking the imperfect statement below, has been Rs. 1,729 during 1878, and the average expenditure Rs. 1,720-6-8. These figures for the past five years are as follow:—

| Year | Income Rs. | A. | P. | Expenditure Rs. | A. | P. |
|---|---|---|---|---|---|---|
| 1874 | 2,051 | 0 | 0 | 1,985 | 0 | 0 |
| 1875 | 2,216 | 15 | 6 | 2,110 | 12 | 7 |
| 1876 | 1,967 | 1 | 8 | 1,886 | 5 | 8 |
| 1877 | 1,882 | 7 | 4 | 1,710 | 11 | 4 |
| 1878 | 1,729 | 0 | 0 | 1,720 | 6 | 8 |

The increase in the number of small dispensaries must tend to reduce the average cost of the whole.

* This is a fund called Prossono Nath Roy's Fund, from the interest of which the dispensaries at Beauleah and Nattore and the school at Digaputty are supported.

26. The total income of all charitable dispensaries in the province for the past year, excluding the balance, cost of medicines and forms, which were supplied by Government, and sale of medicines is abstracted below. The same particulars for five years previously are also shown:—

TABLE No. 15.

| YEARS. | Total income. | PERCENTAGE OF INCOME TO THE TOTAL INCOME RECEIVED FROM | | | | |
|---|---|---|---|---|---|---|
| | | Government. | Local Funds. | Interest on invested capital. | European subscription. | Native subscription. |
| | Rs. | | | | | |
| 1873 ... ... ... ... ... | 3,10,886 | 34·31 | (1) 19·69 | 6·23 | 7·93 | 31·84 |
| 1874 ... ... ... ... ... | 3,36,197 | 35·83 | (2) 19·93 | 4·92 | 7·09 | 32·22 |
| 1875 ... ... ... ... ... | 3,74,902 | 32·60 | (3) 27·82 | 4·64 | 6·74 | 28·19 |
| 1876 ... ... ... ... ... | 3,77,017 | 32·50 | (4) 22·91 | 5·86 | 6·66 | 32·06 |
| 1877 ... ... ... ... ... | 4,00,160 | 30·73 | (5) 25·47 | 6·00 | 5·54 | 32·25 |
| 1878 ... ... ... ... ... | 3,96,885 | 29·97 | (6) 23·86 | 7·87 | 5·64 | 32·65 |

(1) 5·17 from Municipalities and Town Committees and 14·52 from all other local sources.
(2) 6·77 " " 13·16 "
(3) 7·22 " " 20·58 "
(4) 8·97 " " 13·93 "
(5) 7·27 " " 18·20 "
(6) 7·79 " " 16·07 "

The increase of total income for 1877 amounted to Rs. 23,143. In 1878 it was less than that of the previous year by Rs. 3,275. The proportion of money contributed by Government was, however, rather less than in any previous year, being 29·97 per cent. In 1877 it was 30·73. From local funds 25·47 per cent. of income was derived in 1877 against 23·86 in 1878. The interest in invested capital amounted to 6·00 per cent. in 1877 and 7·87 in 1878. The percentage of European and Indian subscriptions was very much the same for the two last years.

27. The reports of Commissioners, Magistrates, as well as Civil Surgeons, dwell on the difficulty of getting subscriptions, which have been promised, paid up with anything like punctuality.* There is in fact hardly a district

* The dispensaries which had subscriptions in arrears on the 31st December 1878 and the amounts due will be found at Appendix No. I.

from which such complaints have not been received, but some are worse than others, as for example Beerbhoom. The dispensary at Synthea was closed in June, and Dr. Roy writes of the others as follows:—" I regret to say that the stability of the other dispensaries is not more certain, and judging from their financial condition and the interest paid by the local members of the Committees, I may say they are dragging on a precarious existence." Dr. Roy thinks that the establishment of a number of endemic fever hospitals in the district at the total expense of Government has had a bad effect on the people and makes them now unwilling to pay; for, according to him, they are by no means unwilling to accept advice and medicine. He writes as follows:—

" For instance, whilst out lately on a special tour of inspection through the fever-stricken localities, everywhere the cry was the want of a dispensary, but no one would come forward with any offer of a subscription. They wanted a *free endemic dispensary* as of former years, and even for a temporary institution during the height of the fever season, that would have been met by the offer of a couple of hundred rupees, the zemindars shrank from payment, whilst all their energies were strained to collect money for the celebration of the procession of an effigy match with their neighbours, for which Rs. 400 were voluntarily subscribed. Mr. Farquarhson of Ellambazar, however, came to the rescue of the people in his part of the country by offering to pay for a temporary dispensary in that village, which was opened on the 28th December last."

While on this subject, it is proper to add that many Rajahs and native gentlemen are most liberal in their support of these institutions, and that in many cases their coming forward from time to time is all that prevents some of the dispensaries from becoming bankrupt. This would be the case with the dispensaries of Chumparun, according to Mr. Meadows, so far as native subscribers are concerned, were it not for the liberality of the Maharajah of Bettiah.

28. From a statement given below, it will be seen that the incomes of dispensaries have increased, comparing 1878 with the two previous years. The largest number of the dispensaries have an income of from Rs. 1,000 to Rs. 2,500, and of these in 1876 there were 78, next year 80, and last year 93. There has, however, been a falling off in the number of dispensaries with incomes varying from Rs. 2,500 to Rs. 5,000, as there were 38 in 1876 and only 32 in 1878.

TABLE No. 16.

*Classification of Dispensaries according to Income.*

| No. | Income annually. | Number in 1878 | Number in 1877. | Number in 1876. |
|---|---|---|---|---|
| | Rs Rs | | | |
| 1 | Under 250 | 3 | 3 | 1 |
| 2 | From 250 to 500 | 8 | 13 | 12 |
| 3 | " 500 " 750 | 48 | 38 | 38 |
| 4 | " 750 " 1,000 | 46 | 42 | 42 |
| 5 | " 1,000 " 2,500 | 93 | 80 | 78 |

* Tajpore not included, cash statement not having been received.
† Teeri ditto ditto ditto.
‡ Daoodkandi included with Commilla.

29. The proportion of income contributed by Government to different dispensaries is shown underneath. Last year Government paid Rs. 1,40,478 for 242 dispensaries against Rs. 1,44,495 for 224 dispensaries the previous year. The income from private sources amounted to Rs. 2,77,939, while in 1877 the sum thus derived was Rs. 2,77,175, or an increase of Rs. 764 in 1878. Of dispensaries receiving the support of Government, 17·7 per cent. have drawn more than half their income from Government. The year before last the ratio was 19·6, in 1876 it was 28·7 per cent., and in 1875 37·4. There were 82·3 per cent. of dispensaries which drew less than half their income from Government, against 80·4 in 1877, 71·3 in 1876, and 62·6 in 1875. The dispensaries entirely supported by Government were at Ungool and Bispara. It is hoped that, during the current year, many more of the dispensaries in Bengal will be made to conform to the original rule in accordance with which Government

pays only half the salary of the medical subordinate and nothing more except providing European drugs:—

TABLE No. 17.

| | Number. | Total income. | | Average of each. | |
|---|---|---|---|---|---|
| | | Government. | Other sources. | Government. | Other sources. |
| | | Rs. | Rs. | | |
| Class 1. Dispensaries entirely supported by Government ... ... ... | 2 | 1,600 | ...... | 800 | ...... |
| " 2. Ditto deriving more than three-fourths of their income from Government. | 3 | 6,027 | 676 | 2009 | 225·3 |
| " 3. Ditto deriving more than one-half of their income from Government. | 38 | 51,990 | 33,116 | 1368·2 | 871·5 |
| " 4. Ditto deriving equal parts ... ... ... ... ... | 5 | 2,520 | 2,520 | 504 | 504 |
| " 5. Ditto deriving more than one-fourth of their income from Government. | 116 | 63,143 | 1,16,340 | 544·3 | 1003 |
| " 6. Ditto deriving less than one-fourth of their income from Government. | 57 | 15,199 | 81,856 | 266·6 | 1436·1 |
| " 7. Ditto deriving no income from Government ... ... | 21 | ...... | 43,431 | ...... | 2068·1 |
| Total ... | 242 | 1,40,478 | 2,77,939 | 580·4 | 1148·5 |

30. In this place the subject of the cost of medicines, instruments, forms, and books ought to have been gone into, but cannot, as the information received is not sufficient to enable me to do so. It would, as before remarked, be a very simple matter with each invoice to send out a memorandum of cost of articles supplied on indent, so that civil surgeons and members might be able to furnish the information wanted. During the year a price list was issued, chiefly with the intention of inducing medical officers to study economy in the use of medicines in dispensary practice.

31. The amounts contributed to dispensaries by various municipalities are exhibited in the following abstract, which compares the contributions of 1877 with those of 1878. It may be stated in general terms that municipal contributions have been increased in nearly every dispensary during 1878, and that those which show the largest decrease in the amount of such contributions are Kishnaghur, Gya, Bankoora, Kutwa, Kandi, Noakholly, Bogra, and Chyebassa.

TABLE No. 18.

| No. | Names of dispensaries. | Amount in 1877. | Amount in 1878. | No. | Names of dispensaries. | Amount in 1877. | Amount in 1878. |

32. The amount deposited in Government Savings Banks in 1878 amounted to Rs. 24,501, against Rs. 17,096 in 1877, Rs. 16,342 in 1876, Rs. 6,100 in 1875, Rs. 9,337 in 1874, and Rs. 18,846 in 1873. The following dispensaries had money thus invested during the past year, viz. Augurparah, Diamond Harbour, Kishnaghur, Ula, Ranaghat, Jessore Jungypore, Dinagepore, Bogra, Cuttack, Noakholly, Commilla, Patna, Bankipore, Barh, Gya, Chupra, Revelgunge, Begooserai, Mudehpoorah, and Deoghur.

33. Taking into account the guaranteed subscriptions of each dispensary and the total annual income from local sources, it will be found that 95, or 53·67 per cent., show an excess of realized capital over guaranteed income; 47, or 26·55 per cent., a deficiency; and 35, or 19·77 per cent., an equality. The amount in excess was Rs. 31,864, and the deficiency was Rs. 8,350. Comparing the past four years we obtain the following results:—

| | 1875. | 1876. | 1877. | 1878. |
|---|---|---|---|---|
| Dispensaries which show an excess of realized capital over guaranteed income. | 56 | 79, or 51·3 per cent. | 93, or 55·3 per cent. | 95, or 53·6 per cent. |
| Ditto ditto a deficiency ... | 30 | 53 „ 31·4 „ | 44 „ 26·1 „ | 47 „ 26·5 „ |
| Ditto ditto an equality .. | 19 | 22 „ 14·3 „ | 31 „ 18·4 „ | 35 „ 19·7 „ |

34. On the 1st January 1879 the balance, including floating and invested capital, amounted to Rs. 7,03,211. The expenditure exceeded the income in two dispensaries, viz. Ramporehat by Rs. 330, and Doolye by Rs. 17. The accounts of 32 dispensaries show no balance at the end of the year. The balance at the end of the year, including investment, varies from 13 annas in Bussirhat dispensary to Rs. 1,71,649 in Dacca. The mean balance to credit of each dispensary was Rs. 2,906. The average cost of each diet varies from 3 annas and 5 pie in the Darjeeling dispensary to 4 pie only in Lalpore dispensary in Rungpore district.

35. Given below is a table showing the number of times the various dispensaries have been visited by Civil Surgeons in 1877 and 1878 :—

TABLE No. 22.

| Number of outlying dispensaries. | Inspections. | Once | Twice. | Thrice. | Four times. | Oftener. | Not once inspected. | Total. |
|---|---|---|---|---|---|---|---|---|
| 198 | Inspected by Civil Surgeons in 1878 | 64 | 63 | 31 | 7 | 14 | 19 | 198 |
| 183 | Ditto ditto in 1877 | 57 | 66 | 22 | 3 | 19 | 16 | 183 |

Thus 179 outlying dispensaries were inspected out of 198 in 1878, or 90·4 per cent., and 167 out of 183 in 1877, or 91·25 per cent.

The following dispensaries were inspected by Dr. Lethbridge, Inspector-General of Jails:—Motihari, Mozufferpore, Kishnaghur, Beerbhoom, Dacca, Chittagong, Comillah, Buxar, Beauleah, Bogra, Burrisal, and Rungpore. Dr. Harvey, Officiating Sanitary Commissioner, visited and reported very fully on the following dispensaries:—Burdwan, Dinagepore, Nattore, Durbhunga, Chittagong, Mahigunge, Rungpore, Cuttack, and at branch, Naihati, Agurpara, Nawabgunge, and Bogra.

Having been a long time a Civil Surgeon, I know from personal experience that dispensaries are occasionally inspected in a careless and hurried manner, and I therefore proposed to the Government of Bengal a form of inspection report, of which a copy will be found at the end as appendix No. II, and which His Honor the Lieutenant-Governor has ordered to be adopted. This form, if properly filled up, ensures that all particulars on which information is desirable are duly given, and by means of it the Surgeon-General will know exactly the state of each dispensary reported on, and will be able to put right anything appearing to require attention. Now that outlying dispensaries will not be visited by Deputy Surgeons-General, and rarely by the Sanitary Commissioner or Inspector-General of Jails, some such minute report seemed to be necessary. The reports which I have received from Dr. Coates, Sanitary

Commissioner, during the present year, are very exhaustive, giving information on every topic connected with the dispensary which he had visited. Nearly all his reports have brought to light matters which would not have been discerned otherwise, and upon which I was able to take action.

36. Dispensary committees have not met at all regularly, although the meetings have been rather more frequent than in 1877. Mr. Mangles, Commissioner of the Presidency Division, calls attention to the want of interest of committees in the management of dispensaries in his division, and so does Mr. Halliday, Commissioner of Patna. The subject has also been alluded to in the forwarding letters of most of the Magistrates, in reference to the dispensaries of their districts, and such has been the case for years past. The following memorandum shows the rate per cent. at which meetings of dispensary committees were held in 1878. Committees assembled monthly in 9·87 per cent. of dispensaries; ten times in 2·05 per cent.; nine times in 2·05 per cent.; eight times in 2·47 per cent.; seven times in 3·7 per cent.; six times in 5·35 per cent.; five times in 2·88 per cent.; four times in 5·76 per cent.; three times in 9·46 per cent.; twice in 10·28 per cent.; and once in 11·11 per cent. There were no meetings of the committees or no record of them in 22·64 per cent., and there were no committees in 12·34 per cent. of dispensaries.

37. In the year 1877 there were 145 cases of labour treated in Bengal dispensaries. Last year there were 160. Moorshedabad had 20, which was the highest number. Next came Dacca with 18 in 1877. Moorshedabad had 16 cases, and Dacca the same number Such cases will never be numerous in the dispensaries of this country.

TABLE No. 23.

*Statement showing the labour cases treated.*

| Dispensaries. | Total. | Dispensaries. | Total. |
|---|---|---|---|
| Moorshedabad | 20 | Mahata | 1 |
| Dacca | 18 | Bankoora | 1 |

| Chyebassa | 2 | | |
| Purulia | 2 | Total | 160 |
| Jehanabad | 1 | | |

38. The amount realized by the sale to the public of Government medicines during the twelve months commencing 1st April 1878 and ending 31st March 1879 was Rs. 3,509-2-9. This is a great falling off, the sales for 1876-77 having amounted to Rs. 6,539-7-2, and for 1877-78 to Rs. 11,989-3-1. But, then, during the last named period sulphate of quinine to the value of over Rs. 10,452 was disposed of, against Rs. 2,156-11 in 1878-79. The sale of sulphate of quinine has now been entirely stopped, and in its place the public is offered the cinchona febrifuge manufactured at the Government plantation at Rungbee, and consisting of a mixture of all the alkaloids which are contained in cinchona bark. During the last financial year the sales of the mixed alkaloids have rather fallen off, so far as the table under observation goes, for in 1878-79 they amounted to lbs. 67-1-8, and in 1877-78 they were lbs. 78-8-12. On this subject I collected from Civil Surgeons all the information

they had to give in explanation of the falling off in the sales, and embodied it in a separate communication to Government (No. 174BG of 6th February 1879). I think it very doubtful whether it is worth while to offer for sale to the public chiretta, which is to be had in nearly every bazar, or jalap powder, when only one pound was bought in all Bengal during the whole year, or castor-oil, which is so easily procurable everywhere, or cholera pills, when only 96 in number, costing 2 annas, were sold from 1st April 1878 to 31st March 1879. All these medicines are kept in stock by Civil Surgeons, and by this time most of them must be useless, as they rapidly deteriorate. Experience would seem to show that the public does not want them. I would recommend that the cinchona alkaloids should alone be sold. That this remedy will eventually come into favour I have no doubt, and if the nauseating principle which it contains, and which affects some persons who take it, could be got rid of, this result would follow more speedily.

TABLE No. 23.

39. I abstract from the reports of Superintendents of dispensaries the passages relating to the cinchona alkaloids. Surgeon A. Tomes of Goalundo writes as follows:—"The cinchona alkaloids have been used with success during the year as a febrifuge." Mr. Peachy of Purneah reports:—"The cinchona febrifuge has now been largely used in the practice of the dispensary. It is a perfect substitute for quinine in nine out of ten adult cases. It nauseates women, and sickens young children very much." Mr. Lyons of Noakhally reports that private persons in that part of the country will not buy the mixed alkaloids. Only one man out of several applicants for quinine could be induced to take the alkaloids. From the annual report of Surgeon Gopal Chunder Roy, M.D., Civil Surgeon of Beerbhoom, I extract the following passage:—"I must speak in unreserved commendation of the value of Darjeeling quinine, the efficacy of which in checking fever is established beyond doubt or cavil. We give it from ten to fifteen grains to adults, but the latter quantity is sure to cut short an ordinary paroxism. Its bad effects were noticed in producing giddiness and nausea, but not to such an extent as to cause any serious objection to its use. I may mention that from September to December 3,945 fever cases were treated in Soory dispensary with Darjeeling quinine alone, supplemented only by 2½ ounces of sulphate of quinine, which is reserved for low or obstinate cases." Surgeon Gilligan of Midnapore says:—"The more general use of the cinchona febrifuge has been attended with the best results, the mass of the people taking to it kindly. If given in moderate doses and at suitable times, I have not noticed the gastric irritation attributed to it." I quote the following passage from the report of Dr. Harvey, Civil Surgeon of the 24-Pergunnahs, relative to the mixed cinchona alkaloids:—

"Some complaints have been made, chiefly by visitors, of the substitution of the cinchona alkaloids for quinine. I believe these complaints will cease

as the merits of the new preparation become better known. I have been prescribing it very extensively of late and taking it largely myself, and I believe it to be little, if at all, inferior to quinine. In large doses (ten grains and upwards) given in mixture it causes much gastric irritation, but small doses, frequently repeated, have little disturbing effect on the stomach, and comparatively large doses can be borne when it is given in pills. I have taken in pills 10 grains at a time with perfect comfort. I could not take the same quantity of quinine in powder or solution. I am doing my best to persuade native doctors of its merits, and have directed them to give it in pills. The native doctor of Harinavi speaks highly of it, and says that 30 grains suffice to cure an average case of fever."

40. Dr. Mookerjee of Dinagepore states that he has used the cinchona febrifuge in nearly three thousand cases, and found it to be inferior to quinine, but superior to atees, "and, unlike both, it produces, so far as fever of this district is concerned, most disagreeable feelings in the system if not properly guarded." He next makes the astounding statement that "it is useless in the constitution of a higher class native, while a very useful remedy for people of a lower stratum in society." How this unusual physiological fact is established is not mentioned. He finds it useful in cases of simple intermittent fever uncomplicated with organic disease. He commonly finds 3 or 4 to 10 grain doses to suffice. But in the cases of fever which are very common in Dinagepore, and which resemble remittent rather than intermittent in its prominent symptoms, he finds the febrifuge to be "utterly useless, nay, very harmful, aggravating these symptoms, and thereby letting the fever approach nearer and nearer towards the remittent type." He gives the febrifuge during the intermission, combined with nitro-muriatic acid. He asserts that if dissolved by means of sulphuric acid, the remedy, so "far as the Dinagepore fever is concerned, is worse than useless," and tends to increase the irritability of the stomach and tendency to nausea. Before giving the remedy he frequently applies a mustard poultice over the pit of the stomach to prevent nausea. Occasionally he gives it with carbonate of soda, spirit of chloroform, or tincture of cardamoms with the same object. It seems to me, however, that before these observations and opinions could be accepted as accurate, they would require to be confirmed by other observers.

41. While writing on the subject of new medicines which have been experimentally tried during the year in Bengal dispensaries, I may mention nim-oil (the oil of the seed of *Azaduructa Indica*), which has been recommended by Surgeon Russick Lall Dutt, M.D., of Bankoora, as a substitute for gurjun oil in the treatment of leprosy. He says that he has used it with great benefit in such cases, and suggests a more extensive trial of it in order to test its efficacy. Dr. U. C. Mookerjee of Dinagepore has written on the virtues of an indigenous plant called *kantakari* as a remedy for dropsy. He states that the plant is named scientifically *Solanum Jacquinii, Var.* Xantho-carpum, and belongs to the natural order of the *Solanaceæ*. He considers it "an invaluable remedy for dropsy, as a sequela of the advanced stage of fever, when all other modes of treatment fail." It is said to be a powerful diuretic, and he believes it to be useful in the following cases: "chronic, violent, or low fever, dropsy, or general anasarca, low vitality of the general system, enlargement of liver and spleen; in short, it suits exactly the cases for which Dr. Ghose of Rungpore advocates rum and milk. I have had it tried in the sudder dispensary and in the jail hospital with success in all dropsical cases, except in some where I tried rum-and-milk treatment, and at the time when the medicine was not available in the bazar. I have had it afterwards planted in the dispensary compound. Mr. Nolan, the late Joint-Magistrate, who once visited the dispensary when I first commenced this sort of treatment, saw the rapid cure of two cases in two days. I add a decoction of koorchie and tincture of muriate of iron in cases complicated with dysentery. I have found it, however, not so efficacious when there is the complication of cirrhosis of the liver. Nearly all the deaths that took place amongst the dropsical cases are due to the latter complication."

42. In my last annual report I alluded to the unsatisfactory manner in which medicines and instruments issued to the dispensaries are in many cases

looked after. Similar carelessness has frequently been brought to notice during the past year, which I cannot do better than illustrate by means of an extract from one of the reports of Dr. Harvey, Sanitary Commissioner, who has brought several similar instances to notice. The present example is selected at random, and refers to Dinagepore dispensary:—"Medicines are kept in a room adjoining the female ward, country drugs are freely used, and Dr. Mookerjee is trying to utilise them still more. European medicines are supplied, as usual, on two separate indents for the civil station and dispensary, but the two supplies are mixed up and the medicines used indiscriminately as required. The cupboards were fairly clean and the medicines well arranged, poisons being kept in a separate locked compartment. On examination, however, I found many bottles, some of which *had never been opened, remaining over from previous supplies, while a fresh stock had been regularly indented for.* There were, for instance, eleven phials of tartar emetic, six of elaterium, five of strychnia, enough to poison a battalion, many of mercury and chalk, red oxide of mercury, calomel, &c. The native doctor's explanation was that it is of importance to have *fresh* medicines, and that old supplies should not be used. This is quite true as regards such medicines as ergot, mercury, and chalk, extracts and other unstable compounds liable to spoil, but there can be no reason why fresh supplies of such medicines as do not deteriorate by keeping should be indented for as a matter of course, as seems to have been the custom." The following quotation refers to Bogra dispensary, which was inspected by Dr. Harvey on the 2nd April 1878:—"On comparing the stock of medicines with the amount declared to be remaining in store in the annual indent, I found the following serious discrepancies:—

| | Declared in November 1877. | Really in stock in April 1878. |
|---|---|---|
| Gum arabic ... ... ... ... | 8 ounces. | 20 ounces. |
| Pitch plaster ... ... ... ... | 4 " | 16 " |
| Ipecacuanha powder ... ... ... | 6 " | 17 |
| Carbonate of magnesia ... ... ... | None. | 1 ounce. |

The quantities indented for had been based on the quantities said to be remaining, and with 17 ounces of ipecacuanha in stock, a further quantity of 1½ lb. had been indented for. The indent, which should have been prepared by the Civil Surgeon, was made out by the native doctor, who says he put down as remaining in store whatever the compounder, an irresponsible servant on Rs. 9 a month, told him." I do not suppose that such false entries as these are made for fraudulent purposes from the fact of the medicines having been left in the dispensary. They are rather, I believe, mere indications of great carelessness which should attract the attention of Civil Surgeons. I trust that Government may be persuaded to order that all dispensaries in Bengal shall pay for their own medicines. I have already urged this as a most desirable measure, and one which, if carried out, would secure that the present waste would be greatly curtailed. A further advantage would be that, as a general rule, medical officers would obtain any articles they could afford to pay for, and there would be no grumbling as to short supplies. A ledger showing the expenditure of medicines has been directed to be kept up in every dispensary, and all instruments which were not required for small dispensaries have been returned into store. When a hospital assistant shows himself competent to operate, he will be allowed to have what instruments he wants. Some hospital assistants can operate, and operate well, as for example Akbar Khan of Dinapore, who is competent to perform any operation in surgery, and is in every sense a good surgeon. His success in ophthalmic operations is great. But there are not many like him, and in the hands of most hospital assistants surgical knives would be rather dangerous weapons if they attempted to use them.

43. It seems impossible for me to establish any check on the returns which I present. That such returns are extensively falsified I have not the slightest doubt, from the fact of having on two occasions detected men in the very act. In each case the assistant surgeon had left the dispensary while a compounder was entering the names of patients and diseases which had no existence. Superintendents find it very difficult to maintain any efficient check on the registers kept up in dispensaries, especially

in outlying ones which they seldom visit. The man in charge may be away for days, and yet the register shows that he had prescribed for so many patients each day. Medical subordinates very often take to falsifying their returns, as they find that numbers, as a rule, are alone considered by visitors. The Magistrate of the district, for instance, writes that he is sorry to see the dispensary falling off in public favour from the numbers being much smaller than at his last visit. The hospital assistant, if he cannot get patients, puts them down at all events in his register, and at his next visit the Magistrate will record that he is glad to find the hospital assistant is becoming more popular and attracting more patients. I recommend Civil Surgeons to sit for an hour or so in the dispensary they are inspecting at the time the patients come for advice, when he will soon percieve whether the register is a true or false record. While admitting the difficulty which Civil Surgeons may have in checking registers and returns, I know from their inspection reports that, as a rule, they do what they can in this direction by examining the books and comparing the entries on the patients' tickets with those in the register. Dr. Dutt of Bankoora keeps up at his office a monthly summary, by means of which he checks the annual return. It is very desirable that for each dispensary monthly returns should be regularly prepared, in order to facilitate the preparation of the annual return and to act as a check on the registers.

44. Many of the dispensaries of Bengal are used as poorhouses or almshouses. I recollect seeing a man in the dispensary at Monghyr who had been there for three years, though he had no bodily ailment of any sort. He used to take his food in the dispensary, for which the dispensary paid, and then go to the bazar begging during the day. The Magistrate who was then in office was frequently spoken to, but said there was no help for it, as there was no other place to which the man could be sent; and he further stated that, in consideration of the municipal contributions to the dispensary, he expected all similar cases to be admitted. Mr. Halliday, Commissioner of Patna, draws attention to the same thing as occurring at Mozufferpore, and states that the Magistrate intends to open a pauper hospital for the reception of the indigent poor who are not sick. In the same way Surgeon Swaine of Ranchi states that the dispensary of that station is used to a very large extent as a poorhouse. When there is no poorhouse it is, no doubt, difficult to provide for feeble paupers who are unable to work; still they are very much out of place in a dispensary to which only sick persons should be sent. In the same way the dispensaries are not unfrequently used as leper hospitals. The district officers in fact have in many instances no other way of disposing of these unfortunate creatures. It is, however, a most objectionable practice, more especially as it is a common idea among Indians that the disease is contagious, and they therefore object to be in the same room or even house with a leper, to whom I have known water refused, as the man asked to give it would not approach the leper. Into Bankoora dispensary fifty lepers were admitted during the year. When the disease has proceeded to ulceration it may be necessary to admit lepers into hospital, but even then they should be placed in an out-house away from the other patients. While mentioning these out-houses I would say that they are very useful for other purposes. In the dispensaries of the North-Western Provinces small detached huts with little enclosures are used for the reception of females, or of patients of the better sort who desire to be attended by their wives or children, and who are thus perfectly private. Detached open sheds are also of singular advantage for the treatment of contagious diseases, bad sores emitting a foul odour. As an instance of the advantage of these open sheds, I may mention that pyæmia showed itself among patients in the dispensary at Burrisal who were under treatment for wounds, but no other cases occurred after the wounded patients were sent into an open shed. To keep out wind, sun, or cold there should be moveable jhamps or purdahs. These sheds have been adopted on my recommendation in several dispensaries of Bengal.

45. Hitherto police cases, by which term is meant cases which are sent for treatment to the dispensary by the police officer or Magistrate, have been maintained at the expense of the charity, which seems to me to be hardly fair. According to returns which I had, there were 27,720 house-patients during

the year 1878, and out of these 10,869 were police cases, for the maintenance of most of whom it would seem the dispensary funds paid. In the Dacca district both paupers and police cases are paid for by the Magistrate. So it is in other districts, and so I think it should be in every district. I have already addressed you on this subject in a separate communication, (No. 450BG, dated the 14th April 1879.)

46. Very many of the dispensaries are very badly situated, being at a long distance from the bulk of the inhabitants. Sub-divisional dispensaries are generally put down not far from the sub-divisional officer's house, though that may be a mile or a couple of miles from the bazar. As a rule, the people are not so very much impressed with our system of medicine as to be likely to walk even quarter of a mile to get advice and medicine, though offered to them gratis. A dispensary therefore should, if possible, be located in the most central part of a town or bazar. Dr. Coates, in some of his recent inspection reports, has called attention to the faulty situation of dispensaries, such as those at Comillah, Bankoora, Furreedpore, and Kishnaghur, and I could of my own knowledge mention others. The worst of it is that once a dispensary has been put in a bad situation, it is almost hopeless to expect to get it moved to a better for want of funds. In reference to Furreedpore dispensary, which is about a mile from the town, the Commissioner says that he considers the situation a good one, and that the people must be singularly indifferent if they will not go so far when they are sick, or their ailment must be slight, or they must be indifferent whether they are sick or well if they will not go that distance. All this is no doubt true, yet the fact may be verified in most parts of India that even the poorest people will not take the trouble to go any distance for advice or medicine though for neither they have to pay. I have seen this proved over and over again.

47. I have from time to time during the past year called attention to the fact of certain dispensaries being almost entirely supported by Government, and of others of which more than half the pay of the medical subordinate is contributed by Government, and orders have issued on each case. It seems very desirable that every dispensary should be classified and graded according to the amount for which a guarantee bond is executed. When the conditions laid down in the Dispensary Rules are not entered into, I would have the dispensary closed, unless in exceptional cases, and the exceptions need be very few.

48. One of the Superintendents proposed that books should be bought for the use of medical subordinates in charge of dispensaries at the public expense. I cannot follow him in this, nor second his proposal, as I think civil hospital assistants ought to find their own books; but I may here bring forward a proposal which I have previously made, viz. that a small half-yearly or annual periodical should be published in Bengali for the use of civil hospital assistants, somewhat after the model of Braithwaite's "Retrospect of Medicine," but very much smaller, and giving a succinct account of all improvements in the treatment of diseases which would be likely to be of service to them in their practice. My proposal would further be that each civil hospital assistant should be compelled to subscribe for a copy. As matters now stand, very few of them ever learn anything more than was taught them, and some have not even got by them any book of reference. I have, however, insisted on each civil hospital assistant attached to a sub-division, or who is liable to give evidence in a court of law, providing himself with a book on medical jurisprudence in a language which he understands.

I have the honor to be,

SIR,

Your most obedient servant,

JAS. IRVING, M.D.,

*Surgeon-General for Bengal.*

F

# STATISTICAL TABLES.

## STATEMENT No. I.

*Showing the number of Dispensaries in Bengal during the year* 1878.

| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
|---|---|---|---|---|---|---|
| POPULATION of THE PROVINCE. | Dispensaries. | Number open on 31st December. | Number opened during the year. | Number closed during the year. | Number open on the last day of the year. | REMARKS. |
| 60,484,831 ... | I Class ... ... ... ... | 15 | 2 | 1 | 16 | Dispensaries at Pootea and Lalpore, in the Rajshahye and Kakina in the Rungpore districts, have been raised from 2nd to 1st class; dispensary at Mudhubunnee, in the Durbhunga district, raised from 3rd class, grade 2, to 3rd class, grade 1; dispensary at Muddehpoora, in the Bhagulpore district, raised from 3rd class, grade 3, to 3rd class, grade 2; and dispensary at Gurbetta, in the Midnapore district, brought under 3rd class, grade 3, during the year. |
| | II „ ... ... ... ... | 12 | 2 | ...... | 14 | |
| | III „ grade 1 ... ... | 22 | 1 | ...... | 23 | |
| | „ „ „ 2 ... ... | 26 | ...... | ...... | 26 | |
| | „ „ „ 3 ... ... | 71 | 4 | 3 | 72 | |

| | Branch ... ... ... ... | 34 | ...... | ...... | 34 | |
| | Sub-divisional ... ... ... | 12 | ...... | 1 | 11 | |
| | Total ... | 230 | 10 | 5 | 244 | |

The principle upon which the classification of dispensaries in Bengal is based will be understood from the following extracts from the Manual of Dispensary Rules (of 1872) of which an abstract is given in the foregoing report.

" The following are the rules under which in future Government aid will be given to dispensaries and small charitable hospitals :—

*Rule I.*—Dispensaries and small charitable hospitals will be divided into three classes. Class I will include such as are virtually private and independent of Government aid. Government will, however, if the subscribers desire it, provide medical inspection and supervision for such institutions, and give European medicines at cost price, on the following conditions : (1) that the medical officer appointed by the subscribers be a duly qualified practitioner, *i. e.* licensed or certified to be qualified by a recognized medical college or school and not a dismissed servant of Government ; (2) that the returns required by the Medical Department be regularly submitted—Government supplying all forms, registers, &c., free of cost. Any institution accepting these conditions is at liberty to have the services of a Government servant to be medical officer; and if the appointment be approved by the Surgeon-General of Bengal, such officer will retain his rights to leave and pension.

*Rule II.*—Class II will include dispensaries in wealthy neighbourhoods, and such as have large endowments. Government will aid this class by granting medicines and instruments free of cost, as well as the requisite registers and forms. The medical officer of the dispensary may be nominated by the subscribers, subject to the approval of the Surgeon-General of Bengal, and his salary will be paid by the dispensary. If a Government servant, his service will count towards pension, and he will be entitled to leave under the rules of his service.

*Rule III.*—In class III will be included all such dispensaries or charitable hospitals as need more liberal assistance. To these, in addition to the aid above specified, a portion—ordinarily half—of the salary of the medical officer will be allowed. In order to regulate this salary, dispensaries, *&c.*, aided under class III will be divided into three grades, according to the standard of medical skill and experience which the supporters desire to obtain and are willing to subscribe for.

(1) Class III, grade 1, will include all dispensaries whose guaranteed local income shall amount to not less than Rs. 120. To these an Assistant Surgeon will be appointed by the Surgeon-General of Bengal who will draw not less than Rs. 120 per mensem, half of which minimum salary, or Rs. 60 monthly, must be contributed from the dispensary funds.

(2) Class III, grade 2, will include all dispensaries whose guaranteed local income shall not be less than Rs. 60, and not above Rs. 120 a month. To these a Civil Hospital Assistant will be appointed by the Surgeon-General of Bengal, who will draw not less than

Rs. 50 per mensem, half of which minimum, or Rs. 25 monthly, must be contributed by the dispensary funds.

(3) Class III, grade 3, will include all dispensaries whose guaranteed local income shall not be less than Rs. 40, and not above Rs. 60 per mensem. To such dispensaries a Civil Hospital Assistant will be appointed by the Surgeon-General of Bengal, who will draw not less than Rs. 30 per mensem, and half of this minimum, or Rs. 15 monthly, must be contributed by the dispensary funds.

Before sanctioning the establishment of a dispensary of any grade under Class III of these rules, the Government will require either a legal guarantee, in the Form A annexed, of the minimum subscription of the class of institution proposed, or an undertaking by the local municipality to make good that amount. When a guarantee is given, it should be executed by one or more substantial residents, or by the members of the proposed committee of management. Formal guarantees will not be required from municipalities.

*Rule VII.*—At all sub-divisions where there is no regular dispensary, but where a sum of not less than Rs. 15 can be raised by local subscriptions for providing the necessary establishment and purchasing bazar medicine and other articles, the Civil Hospital Assistant of the sub-division will be required to afford medical aid to all poor people who may apply for relief. Rs. 10 per mensem will be allowed by Government to the Civil Hospital Assistant as remuneration for the extra duties imposed on him."

# STATEMENT No. II.

*Shewing the number of In-door and Out-door Patients treated in the Dispensaries of Bengal during the year* 1878.

## APPENDIX II.

*Inspection Report of* *Dispensary by the Civil Surgeon of*

(Station and date)

Date of inspection

Time of inspection. From o'clock M. to o'clock M.
General appearance of dispensary and surroundings.
Number of house patients previous day.
Ditto out-door ditto ditto.
Daily average previous year { House patients. / Out ditto.
How many out-door patients did you see in attendance during the time of the inspection?
Number of operations last month, and their nature.
Were there any cases of operations in the dispensary on day of inspection?
Have you compared the stock of medicines with last indent?
If so, are there any discrepancies?
Are the medicines well kept and sufficient in quantity?
Are the poisons kept separately under lock and key?
Are bazar medicines extensively used?
Which are used as antiperiodics?
Are the instruments well kept; clean, sharp, and free from rust?
Are the tables clean, especially the compounding table?
Are the mortars, slabs, spalulas, &c., clean and serviceable?
Are the scales and weights clean and in proper order?
Are the scales properly balanced?
Are any grain weights deficient? if so, who lost them?
How many blankets are there for house patients?
How many cots are there?
How often does the committee meet?
How many meetings were there last year?
On what date was the last meeting of the committee held?
What is the guaranteed income of the dispensary?
What sum was collected last year?
What sum was collected last month?
What is the amount of subscriptions in arrears?
Are the records kept up by the medical subordinate in charge of the dispensary in his own hand?
Especially, are all parts of the register of out-patients in his own writing?
Does he appear to be interested in his work?
Do the people of the place appear to like him?
Does he keep up his knowledge of medicine and surgery (which can be tested by asking him questions)?
Does the compounder know the composition and doses of the drugs most used?
What did each patient cost for diet last month?
What was the average cost of extras?
What wines or spirits (if any) are used?
Judging from the copies of police *post mortem* reports, does he appear to be well up in Medical Jurisprudence?
Muster the establishment and state whether all were present.

C. E. G. and others—Reg. No. 3664—400—26-7-79.

# RESOLUTION.

MEDICAL.

*Darjeeling, the 23rd October* 1879.

READ—

The Report by the Surgeon-General on the working of the Charitable Hospitals and Dispensaries in Bengal (excluding those in Calcutta and its Suburbs) for the year 1878.

Read again—

The Report for 1877, and the orders passed by Government thereon.

THE number of permanent dispensaries and hospitals at work in the interior of Bengal at the close of the year 1877 was 239. Eight new dispensaries were established during the year under review, and three, including a new dispensary, were closed. Thus 244 dispensaries remained open at the close of the year, and of these 166 were under the rules of 1872. Six temporary dispensaries, established in consequence of the outbreak of epidemics, were in existence in the Midnapore district for very short periods during the year, and one was opened in the Beerbhoom district on the 28th December. The present report does not show the statistics of the Synthia dispensary which was closed on the 1st June 1878, or of three newly established dispensaries which were not in full working order during the year. Of the 243 dispensaries from which returns were received by the Surgeon-General, 154, or 63·37 per cent., admitted both in and out-door patients, as compared with 62·2 per cent. in 1877; and the remaining 89, or 36·63 per cent., treated out-patients only.

2. Of the medical subordinates who had charge of dispensaries during 1878, 58 were Assistant Surgeons and 183 Civil Hospital Assistants. The Assistant Surgeons are reported to have generally done their work well, but many of the Hospital Assistants are, the Surgeon-General states, quite unfit for the posts they hold, being men without training and experience, who had to be thrust into independent charges in consequence of the sudden withdrawal of the Military-class Hospital Assistants for special famine duty in Madras and Mysore. Of the Civil Hospital Assistants attached to dispensaries, 78 drew extra pay in consequence of their knowledge of English, against 84 in 1877. Many others besides those who have passed the qualifying examination are reported to be able to write their returns and registers in English.

3. The total number of patients treated during 1877 in the mofussil dispensaries, including those omitted from the report for that year, was 874,264, of whom 23,853 were in-door and 850,411 out-door patients. The number of patients treated in the 243 dispensaries during the past year was 921,252, a higher number than in any previous year and 46,988 more than in 1877. Of those treated 27,720 were in-patients and 893,532 out-patients. Although the total number of in-door patients was thus greater by 3,867, and the number of out-door patients greater by 43,121 than in 1877, the average daily attendance of both in-patients and out-patients at each dispensary was lower in 1878 than in the previous year, being 7·75 and 33·72 as compared with 7·92 and 35·75 in 1877. The dispensaries which treated the largest number of patients were Dacca (19,305), Mozufferpore (16,491), Burdwan (15,738), Patna (14,730), and Midnapore (14,006). The total number of patients treated in the hospitals and dispensaries, permanent as well as temporary, both in Calcutta and in the interior of Bengal, was 1,245,776 against 1,225,852 in 1877. The proportion of the population treated in all the dispensaries and hospitals in the province was 2·05 per cent. against 2·02 per cent. in 1877. In the tabular statements in the report under review, the Surgeon-General should have entered the complete figures for 1877 instead of repeating the incomplete returns given in the previous reports.

4. Of the patients treated 60·46 per cent. were male adults, 19·57 per cent. female adults, and 19·96 per cent. children; ·11 per cent. were Europeans, ·39 per cent. Eurasians, 31·44 per cent. Mahomedans, 66·29 per cent. Hindus, and 1·76 per cent. persons of other races and religions. These proportions were nearly the same as in previous years.

5. Of the total number of in-door patients treated, 54·30 per cent. were cured, 11·07 per cent. were relieved, 20·22 per cent. died, and 14·4 per cent. are returned as otherwise accounted for. These results compare unfavourably with those of the previous year, when 55·03 per cent. were cured, 12·25 per cent. relieved, and 17·38 per cent. died. During 1878, the mortality was more than 30 per cent. in 22 dispensaries, and between 25 and 30 per cent. in 10 more. It was 50 per cent. at Bussirhat, 58·81 per cent. at Goalundo, 60·60 per cent. at Barrackpore, and 83·33 per cent. at Magoora. At Bussirhat and Magoorah the average daily attendance of in-door patients was too small to render the high mortality of any significance.

6. As in 1877, the chief diseases treated in mofussil dispensaries were fever, goitre, diseases of the skin, diseases of the spleen, rheumatic affections, and ulcers. The patients suffering from these complaints were 22·88, 7·10, 6·70, 5·48, 4·83, and 4·73 per cent. respectively of the total number treated, as compared with 22·74, 6·66, 6·51, 6·59, 4·98, and 4·06 per cent. in the previous year. These figures show a decrease in the proportion of patients treated for diseases of the spleen and rheumatism, and a slight increase in the proportion of those suffering from the other diseases mentioned. There was a falling off in the number of fever cases treated in the dispensaries in the Burdwan Division from 84,509 in 1877 to 80,345 in 1878. The total number of cases of goitre treated in the past year was 65,401 against 55,480 in 1877. These cases were most numerous in the dispensaries in the districts of Mozufferpore (14,537), Sarun (13,245), Chumparun (10,044), Rungpore (10,520), Durbhunga (6,222), Purneah (2,735), Mymensing (2,113), Bhagulpore, (1,556), and Dacca (1,490), while in many of the adjoining districts there were scarcely any cases of the disease treated. With reference to the remarks made in the Resolution on the Report for 1877, on the subject of the prevalence of goitre in certain parts of Bengal and Behar, the Surgeon-General quotes a passage from the annual report of Dr. Mathew, Civil Surgeon of Mozufferpore, from which it appears that, while the disease may be very prevalent in one village, it may be almost unknown in others in the immediate vicinity. The Surgeon-General remarks that little or nothing is known as to the cause of the disease, though it is "variously ascribed to drinking snow water or water impregnated with calcareous or earthy particles, or to living in damp places imperfectly drained." Dr. Irving's suggestion for the deputation of a special officer to investigate the origin of the disease cannot at present be adopted, but the Sanitary Commissioner will be desired to make enquiries on the subject during his visits to districts in which the disease prevails.

7. Altogether 48,970 surgical operations are reported to have been performed in the mofussil dispensaries during the past year, and of these 2,791 are classified as major and 46,179 as minor operations. The number of major operations reported to have been performed during 1877 was 2,301, and of minor operations 37,908. As in 1877, the greatest number of major operations were performed in the dispensaries of Monghyr (416), Dacca (176), Mozufferpore (105), and Dinapore (95). Though the total number of major operations performed in 1878 was greater than in 1877, the number performed by Civil Surgeons themselves was less than in the preceding year. The Superintendents of the Hooghly, Rajshahye, Julpigoree, Patna, Bankipore, and Mozufferpore dispensaries performed no operations at all, and those of the Berhampore and Arrah dispensaries only one operation each. In the Resolution on the report for 1877, the Lieutenant-Governor drew attention to the neglect of practical surgery by several of the Civil Surgeons; and the Surgeon-General, in contrasting this year the number of operations performed in the dispensaries of the North-Western Provinces with those in Bengal, points out forcibly that, unless the Civil Surgeon takes an interest in the operations at the dispensaries in his charge, there is not likely to be any increase in the number of patients to be operated upon. Of the patients who underwent major operations 86·7 per cent. are shown to have been cured or relieved, against 83·4 per cent. in the previous year; while the mortality was 4·1 per cent. in 1878, against 4 per cent. in 1877, and 3 per cent. in 1876. These figures cannot, however, be accepted without qualification, as in a recent memorandum by the Committee on Medical Expenditure in Bengal it is shown that most of the so-called major operations performed in dispensaries are such as would be classified as minor operations, or not counted as operations at all at the Medical College Hospital. The

present classification is in accordance with the form prescribed in the orders of the Government of India, No. 129 of the 21st February 1877; but it is clear that in many of the dispensaries the principle stated in the note to those orders is neglected, and operations which involve no danger to life or to an organ or limb are classed as major instead of minor operations. This principle also appears not to have been followed with regard to all the operations classified in the prescribed form, and if the Surgeon-General will prepare and submit a revised list of major operations, the Lieutenant-Governor will forward it to the Government of India, with a request that it may be adopted in substitution for the present form.

8. The total income of all the mofussil dispensaries for the past year, excluding the balance on the 1st January 1878, the cost of medicines, forms, and registers supplied by Government, and the sale proceeds of medicines, was Rs. 3,96,885. This is less than the receipts of 1877 by Rs. 3,275, but is greater than those of any previous year. The contributions from Government amounted to Rs. 1,18,945, or 29·97 per cent. of the whole income; Rs. 1,29,599 or 32·65 per cent. was contributed by native subscribers, and Rs. 22,412 or 5·64 per cent. by Europeans; the interest from invested capital amounted to Rs. 31,240 or 7·87 per cent. of the total income; municipalities and town committees contributed Rs. 30,918 or 7·79 per cent.; and Rs. 63,771 or 16·07 per cent. was derived from other local sources. Compared with the previous year, there was a slight increase in the proportion of income derived from private and municipal contributions, and from interest on invested capital, and a slight decrease in the proportion of receipts from Government and from local funds other than those of municipalities.

9. The total cost of European medicines supplied by Government free of charge to dispensaries in the interior appears from the returns furnished by Civil Surgeons to have been Rs. 18,842. It is, however, doubtful if this amount is correct, for the Surgeon-General has been unable yet to obtain accurate information from the Examiner of Medical Accounts. It was expected that the required information which was not available at the time the report was submitted would be forwarded to Government soon afterwards, but it has not yet been received. The Examiner of Medical Accounts will, it is understood, in future furnish the Accountant-General with quarterly statements of the cost of medical stores supplied to each institution in Bengal and the value of articles returned to store. If these statements are regularly and punctually forwarded, as the Lieutenant-Governor trusts they will be, there ought in future to be no difficulty in giving full and accurate information in the Annual Reports. In order to avoid the waste of expensive drugs, and the constant irregularities in the issue and custody of medicines under the present system by which European medical stores are supplied gratuitously by Government to dispensaries, it has been decided to adopt in Bengal the system in force in Madras and Bombay under which dispensaries pay for all medicines and instruments they receive from the Government stores. This measure was suggested by the Government of India in January last, and the Committee on Medical Expenditure, who were consulted on the subject, have recommended its adoption. The Lieutenant-Governor is satisfied that it is the only system under which waste can be prevented, and dispensaries that cannot afford to pay for their own medical stores will be closed unless there are some very special circumstances to render their maintenance necessary. Enquiries have recently been made through the Commissioners to ascertain the exact financial condition of each dispensary, and the future status of each institution will now be definitely determined.

10. In 47 dispensaries, the actual receipts from local sources fell short of the guaranteed income, and the subscriptions promised to many of the dispensaries were not regularly paid. Appendix No. I to the report shows that 147 dispensaries had subscriptions in arrears on the 31st December 1878, and in several cases large sums were outstanding. The fact that Government have hitherto contributed so largely to these institutions appears in some instances to have produced the impression among the people that they are under no obligation to maintain the dispensaries themselves, and that any failure on their part to pay their promised subscriptions will be met by additional assistance from Government. From the remarks of the Civil Surgeon of Beerbhoom it would appear that the zemindars of that district have been demoralized by

the establishment of numerous temporary dispensaries at the sole cost of Government. On the other hand, the Lieutenant-Governor is glad to acknowledge the liberality of many of the Rajahs and zemindars of Bengal, but for whose contributions it would have been necessary to close several institutions that are now in a flourishing condition. The liberality of the Maharajah of Bettiah is specially noticed by the Surgeon-General.

11. The total expenditure during the year, excluding surplus funds invested, was Rs. 4,16,342 against Rs. 3,83,198 in 1877. In two dispensaries, viz. those at Rampore Hât and Doolye, the expenditure exceeded the income. The former showed a deficit also in the previous year, and the latter dispensary has now been closed. The accounts of 32 dispensaries showed no balance at the end of the year, while 21 dispensaries invested a portion of their income after the payment of all expenses. The total amount invested was Rs. 24,501 against Rs. 17,097 in 1877, and Rs. 16,342 in 1876. The surplus balance at the end of the year, including money invested, varied from thirteen annas at the Bussirhat dispensary to Rs. 1,71,649 to the credit of the Mitford Hospital at Dacca. The mean balance at the credit of each dispensary in the province was Rs. 2,906.

12. Out of 198 dispensaries outside the limits of civil stations, 179, or 90·4 per cent., were visited by Civil Surgeons, 64 being inspected once, 63 twice, 31 thrice, 7 four times, and 14 more than four times, while 19 dispensaries were not inspected at all. Notwithstanding the repeated orders of Government on the subject, the duty of inspecting mofussil dispensaries appears to be less and less attended to. The figures just given show that 42 per cent. of the dispensaries were during the past year not visited as often as the existing rules require. The number of inspections prescribed is only two annually, and the Lieutenant-Governor must insist on these inspections being made. The names of those Civil Surgeons who neglect this important portion of their duty should be submitted in future for the Lieutenant-Governor's information. In order to secure that the inspections when made are properly and thoroughly performed, the Surgeon-General prepared a form of inspection report at the close of the past year, and the form is now adopted by all Civil Surgeons. The inspections by Dr. Coates, the Sanitary Commissioner, and Dr. Harvey, the Officiating Sanitary Commissioner, are reported to have been especially thorough and useful.

13. The Dispensary Committees appear to have taken but little more interest in their work during the past year than in 1877, and the returns of meetings held are very unsatisfactory. The Committees of only 9·87 per cent. of the dispensaries met regularly once a month. In 2·05 per cent. of the dispensaries, the Committees assembled ten times; in 2·05 per cent. nine times; in 2·47 per cent. eight times; in 3·7 per cent. seven times; in 5·35 per cent. six times; in 2·88 per cent. five times; in 5·76 per cent. four times; in 9·46 per cent. three times; in 10·28 per cent. twice, and in 11·11 per cent. only once during the year. The Committees of 22·64 per cent. of the dispensaries either held no meeting at all during the year, or kept no record of their meeting. The continuance of the dispensaries will in future depend more than hitherto on the exertions of the Committees, and the Lieutenant-Governor trusts that the increased responsibility devolving upon them will lead to their devoting more time and attention to the institutions in their charge.

14. The amount realized by the sale of medicines at dispensaries in the financial year 1878-79 was Rs. 3,509, against Rs. 11,989 in 1877-78 and Rs. 6,539 in 1876-77, the falling off being accounted for by the sale of sulphate of quinine being stopped and the substitution of the cheaper cinchona febrifuge manufactured at the Government plantation at Rungbee, of which 67 lbs. were sold to the public during the year. Having regard to the very small demand for other drugs, the Surgeon-General recommends that their sale by Government should be discontinued. There is no doubt considerable loss by the deterioration of the drugs kept in stock by Civil Surgeons, but some benefit must be caused by even the small sales that now take place, and the Lieutenant-Governor will await the results of another year before deciding whether the cinchona febrifuge shall alone be sold by Government. The extracts given from reports by medical officers as to the value of the mixed cinchona alkaloids are interesting, and the experiences of Dr. Harvey and Dr. Gopal Chunder Roy form a valuable addition to the

overwhelming testimony as to the efficacy of the febrifuge. Dr. Harvey, who has not only prescribed the drug extensively but used it largely himself, considers it to be very little, if at all, inferior to quinine; and in the sudder dispensary at Beerbhoom 3,945 cases of fever were treated in three months, the febrifuge being supplemented by only 2½ oz. of sulphate of quinine. The observations of the Civil Medical Officer of Dinagepore certainly require to be tested by other observers before any importance can be attached to them. Sir Steuart Bayley finds it difficult to accept, without further explanation, Dr. Mookerjee's assertion that the febrifuge, "is useless in the constitution of a higher class native, while it is a very useful remedy for people of a lower stratum in society."

15. Orders have issued separately regarding the payment to be made by Magistrates in certain cases for the maintenance of persons sent to dispensaries by the police in consequence of injuries sustained under circumstances which form the subject of a criminal enquiry. The proposal made by the Surgeon-General that each Civil Hospital Assistant should be compelled to subscribe for a small half-yearly or annual medical periodical to be published in Bengali is now under consideration, and orders will be issued hereafter.

ORDER—Ordered that a copy of this Resolution be forwarded to the Surgeon-General for information and guidance, and to all Commissioners of Divisions for information and for communication to District Officers.

Ordered also that a copy of the Resolution, together with a copy of the Report, be forwarded to the Inspector-General of Jails for information, and to the Sanitary Commissioner for information and guidance.

Ordered also that a copy of the Resolution, together with a copy of the Report, be forwarded to each member of the Committee on Medical Expenditure for information.

Ordered also that a copy of the Resolution, together with a copy of the Report, be submitted to the Government of India in the Home, Revenue and Agricultural Department for information.

By order of the Lieutenant-Governor of Bengal,

HORACE A. COCKERELL,

*Secretary to the Government of Bengal.*

No. 3754.

COPY forwarded to the Surgeon-General, Bengal, for information and guidance.

No. 3755.

COPY forwarded to all Commissioners of Divisions for information and guidance, and for communication to District Officers.

Nos. 3756-57.

COPY of the Resolution, together with a copy of the Report, forwarded to the Inspector-General of Jails for information, and to the Sanitary Commissioner for information and guidance.

No. 3758.

COPY of the Resolution, together with a copy of the Report, forwarded to each member of the Committee on Medical Expenditure for information.

By order of the Lieutenant-Governor of Bengal,

H. M. KISCH,

*Offg. Under-Secy. to the Government of Bengal.*

DARJEELING,
*The 27th October* 1879.

W. H.—Reg. No. 6555—29-10-79.

# REPORT

ON THE

# CHARITABLE DISPENSARIES

UNDER THE

# GOVERNMENT OF BENGAL

FOR THE YEAR

1879.

BY

A. J. PAYNE, Esq., M.D.,

*Surgeon-General for Bengal.*

Calcutta:

PRINTED AT THE BENGAL SECRETARIAT PRESS.

1880.

# Report on the Charitable Dispensaries

UNDER THE

# GOVERNMENT OF BENGAL,

## FOR THE YEAR 1879.

FROM THE SURGEON-GENERAL FOR BENGAL,

TO THE SECRETARY TO THE GOVERNMENT OF BENGAL,
JUDICIAL DEPARTMENT.

*Dated Calcutta, the* 11*th May* 1880.

SIR,

I HAVE the honor of reporting as follows on the Charitable Dispensaries of Bengal for the year 1879.

2. In showing the number of dispensaries in existence, the first table includes the four institutions of the suburbs of Calcutta which have been omitted from the report on the medical institutions of the town.

TABLE No. 1.

| | |
|---|---|
| Remained open on 31st December 1878, including the four Calcutta suburban dispensaries ... ... ... | 248 |
| Established during the year 1879 ... ... ... | 9 |
| Total ... | 257 |
| Abolished or closed ... ... ... | 2* |
| Remaining on 31st December 1879 ... ... ... | 255 |

* Kishnaghur Branch Dispensary, closed on 1st April 1879.
Bamunkhund Dispensary, closed on 22nd April 1879.

3. Particulars of the newly opened dispensaries are given in the second table.

TABLE No. 2.

| LOCALITY. | District. | Class. | Number and date of Government orders sanctioning their establishment. |
|---|---|---|---|
| Ambaria | Mymensingh | Class III, grade 2 | No. 797 of 13th February 1879. |
| Baloorghat | Dinagepore | Class III, grade 3 | " 3973 of 25th November " |
| Benagaria | Sonthal Pergunnahs | Ditto | " 4132 of 9th December " |
| Chandpore | Tipperah | Rule VII | " 800 of 13th February " |
| Govindpore | Maubhoom | Ditto | " 4175 of 12th December " |
| Jaffergunge | Tipperah | Class I | " 447 of 25th January " |
| Kalimpoong | Darjeeling | Rule VII | " 855T of 27th June " |
| Morellgunge | Jessore | Class III, grade 3 | " 3601 of 29th September " |
| Patiraj | Dinagepore | Ditto | " 1480T of 28th July " |

4. The only endemic dispensaries in existence in 1879 are entered below. They have all been closed as the statement shows.

TEMPORARY DISPENSARIES.

| Locality. | | Number treated. | Remarks. |
|---|---|---|---|
| Balasore district ... | Remnah ... ... ... | 166 | Closed on 6th August 1879. |
| | Busta ... ... ... | 161 | " on 8th " " |
| | Dhamnuggur ... ... | 455 | " on 11th November " |
| Narainghur in Midnapore district ... ... ... | | 2,979 | " on 29th April " |
| Total ... | | 3,761 | |

5. It will be gathered from the above tables that the year 1879 has added seven to the number of the Bengal dispensaries, which had already largely exceeded the number existing in any other province of India. In his resolution on the report for 1876, the Lieutenant-Governor expressed doubt whether increase in the number of dispensaries, taken alone, should be regarded as matter of congratulation. The doubts were based on the untrustworthiness of returns from remote places, on laxity of supervision, and on the apparent want of confidence with which the people generally regarded these institutions. The Lieutenant-Governor hoped for improvement under closer attention from superintending officers, and intimated an opinion that it would be better if each district possessed a few dispensaries situated at well selected points, than that the country should be covered with institutions not commanding the confidence of the people, and operating to the injury of private practitioners of medicine.

6. There is no doubt that the improved supervision contemplated in the above resolution has been realised during the past two years. The visits of civil surgeons have been more numerous and, under a form introduced by Dr. Irving, their reports have furnished complete information on all points of management ascertainable by inspection. The attention which these reports received from my predecessor soon had its effect on the irregularities previously noticed, and particularly, as it seems, on the neglect of records, the losses of Government property, and the false returns of medical stores. In all these matters very great improvement has taken place. It is much less common than it was for a civil surgeon to find fault with dispensary books; they are written up to date by some one, if not always by the proper person. Medicines and instruments are fairly well kept, and quantities in store have generally corresponded of late with returns and indents. Order and cleanliness seem to be much more usual than they were. Committee meetings have been more frequent under pressure. The following statement shows the number of committee meetings in 1879:—

| | | |
|---|---|---|
| Monthly or oftener in ... ... ... | 26 | dispensaries. |
| Eleven times ... ... ... ... | 9 | " |
| Ten " ... ... ... ... | 9 | " |
| Nine " ... ... ... ... | 10 | " |

| No committees ... ... ... ... | 29 | " |
| Under municipalities ... ... ... | 9 | " |

7. But while systematic inspection has improved the official aspect of the institutions, closer insight has revealed much, in their essential working, which will not incline the Government to judge more favourably than before concerning the benefits conferred by outlying dispensaries on the classes of the people for whom they are intended. There are many examples, not only of

money liberality, but of warm and active interest, shown by native gentlemen and ladies of rank and property, in the affairs of the charities. They are for the most part instances of dispensaries supported entirely by munificent founders, and are among those on the list which are the most valuable to the poor. But regarding the institutions which the Government has been induced to support by local representations, as I suppose, of popular necessity, there is evidence that they have originated too often in the desire of richer men to obtain, for their families and dependants, medical treatment at a nominal cost, or for themselves formal recognition as public benefactors. That the medicines supplied by Government for the poor are shared by the rich, is a fact that has been often indicated in official reports in oblique or general terms; but those who have witnessed these things say plainly that, in many a village dispensary, the sick peasant is treated with cheap drugs from the bazar, while the English medicines go to the houses of the richer classes.

8. Bengal has examples enough to show that when a native proprietor is sincere in his desire to benefit his poorer neighbours, the above is not the way in which he acts. He does not ask the Government to help him to pay the cost of his charity, but only to give him security for good work in a trained officer and genuine drugs, at his own expense. Sometimes he does not even ask for this, but under local advice establishes a dispensary of his own authority and means. There are several such institutions in the province which do not figure in official reports, and the working of these and of the other independent dispensaries is, for the most part, very different from that of the pseudo-charities to which the public revenue has contributed largely. I shall give an example hereafter of the manner in which a small municipality is led to act when single-hearted benevolence is the motive.

9. The minute enquiries of the Sanitary Commissioner on his tours have confirmed the evidence of civil surgeons in the foregoing matters. In some cases, no sooner has a dispensary been established than the interest of the committee has ceased, and the management has been left to the native doctor. Promises of support and guarantee bonds have been forgotten, with the necessities of the poor which were prominent in words before. Subscribers have refused to pay, frankly declaring that they had expected to receive gratuitous medicine. Members of committee, and even subordinate officers of Government in good position, have been conspicuous among defaulters. When a dispute has arisen, or a judicial enquiry has gone below the surface of things, there has been evidence of the same abuse of charity and misappropriation of Government provision. How far the poor have really benefited by the dispensaries I am not prepared to say, for the returns are not true; but the table which I shall presently submit will show that, even accepting the figures as they stand, if all the district dispensaries in Bengal were closed at once, not one per cent. of the rightful recipients of charity would feel that they had gone.

10. Such would be the inevitable conclusion from the entire dispensary statistics. To give it effect in practice would be to inflict a great injury on a number of poor communities who realise and appreciate the benefits of well directed charity. But the great public usefulness of the better dispensaries disappears in the general calculation, showing how low a value must be set on the majority, and bearing with force and true direction on the opinion that it were better to have a few well ordered dispensaries in selected places, than to scatter broadcast over the province a pretence of medical charity. To the question whether the growing number of these institutions is a matter for congratulation, it seems to me that a conclusive answer is afforded in the foregoing facts. I venture to think that the question which presses for consideration now is whether it is not advisable so to enforce existing bonds and pledges as to expedite the closure of a large number of these abortive charities, and to use all available means and efforts to make the remainder more useful. If one-third of the existing total in Bengal be taken, we shall probably have a maximum estimate of the number of dispensaries which fulfil the intention of Government towards the people, and that proportion will include the best private foundations. In the following table the dispensaries are classified according to the total numbers of patients treated during the year:—

TABLE No. 3.

| | In-door | | | | | | | | | | Out-door. | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Under 25. | 25 to 50. | 50 to 75. | 75 to 100. | 100 to 250. | 250 to 500. | 500 to 750. | 750 to 1,000. | Upwards of 1,000. | Total. | Under 250. | 250 to 500. | 500 to 750. | 750 to 1,000. | 1,000 to 2,500. | 2,500 to 5,000. | 5,000 to 7,500. | 7,500 to 10,000. | Upwards of 10,000. | Total. |
| 1879 ... | 25 | 20 | 18 | 13 | 46 | 26 | 5 | 1 | 1 | 155 | ... | 4 | 8 | 16 | 89 | 89 | 19 | 16 | 9 | 250 |
| Percentage ... | 16·13 | 12·9 | 11·61 | 8·38 | 29·68 | 16·77 | 3·22 | ·65 | ·65 | ... | ... | 1·6 | 3·2 | 6·4 | 35·6 | 35·6 | 7·6 | 6·4 | 3·6 | ... |
| 1878 ... | 28 | 13 | 14 | 15 | 52 | 24 | 3 | 2 | 3 | 154 | ... | 3 | 6 | 14 | 85 | 87 | 22 | 14 | 12 | 243 |
| Percentage ... | 18·18 | 8·44 | 9·09 | 9·74 | 33·76 | 15·58 | 1·95 | 1·80 | 1·05 | ... | ... | 1·23 | 2·47 | 5·76 | 34·98 | 35·8 | 9·05 | 5·76 | 4·94 | ... |

11. Again, if the inferior dispensaries were all, in their inception, unimpeachable, a high degree of failure in working them would be certain from the want of professional men fit to preside over the greater number, and fit to represent English medicine to the people. The following table shows the classes of medical officers who hold these charges :—

TABLE No. 4.

| | 1878. | | 1879. | |
|---|---|---|---|---|
| House Surgeon, Dacca ... ... ... | | 1 | ... | 1 |
| Assistant Surgeons, 1st grade ... ... | 5 | | 6 | |
| Ditto ditto, 2nd ,, ... ... | 13 | | 13 | |

| | — | 58 | — | 65 |
| Medical graduate of the East Indian Railway service | | ... | ... | 1 |
| Civil hospital assistants ... ... ... | | 183 | ... | 184* |
| Total ... | | 242 | | 251† |

* One of these not in the Government list.
† To four dispensaries officers had not been appointed when the year closed.

The class of officer to be appointed to a dispensary is not optional with the Government or this department; it is determined by the means available on the spot. It belongs to this part of my subject to show that the growth of dispensaries has greatly outstripped the means of Government to provide efficient medical service of the class required, and has been the main reason why men have been placed in positions for which, by knowledge and character, they have been totally unfit.

12. In the year 1863 there were 57 dispensaries of all classes in Bengal. The distinction of classes is not noted in the reports. Classification would seem to have originated in the following year. In 1864 a scheme was organised and rules laid down for Government assistance. From this time a great impulse was given to the spread of these institutions. In 1865 the first annual report was submitted. The number of dispensaries in existence was 86, and the Government outlay on them is stated to have been about Rs. 1,00,000, or 51 per cent. of the total expenditure. This probably does not take into account the cost of medical stores. As early as the year 1866 the state of the lower medical service, in relation to dispensary charges, attracted attention. The Inspector-General of Hospitals wrote as follows :—" A native doctor left alone in a distant part of Bengal, if sickly or negligent or peculative, or if he proves to be ignorant, not only becomes an impediment in the way of relieving suffering humanity, but is an occasion of disgrace to the science of European medicine, and brings ill-repute on the Government who employ him." The necessity for inspection of minor dispensaries was pointed out. In 1867 the practice was introduced, and travelling allowance sanctioned. In 1866 reports had been received from 103 dispensaries, and it is mentioned that there had been an addition of 39 during the year. In 1867 the total number reached 135, and improved management was reported. In 1868 there were 142 dispensaries, whereof 36 were in the hands of assistant surgeons and 106 under native doctors. The largest increase had been in the minor dispensaries. The total outlay which in 1865 had been Rs. 1,99,177, was now Rs. 2,67,467, and the Government grant Rs. 1,15,000, subject to correction as before. The

proportional cost to Government had fallen from 51 to 43 per cent. of the total. Inspection had been satisfactory on the whole, but prominent notice was again taken of the evidence of neglect of duty by the officers in charge of dispensaries. The foregoing figures do not include the medical charities of Calcutta.

13. Between 1864 and 1868 the number of dispensaries in Bengal rose from 86 to 142, in the North-Western Provinces from 89 to 116, in the Central Provinces from 35 to 66, and in Oudh from 16 to 21. In the Punjab there were 92 dispensaries in 1868.

By the year 1873 the number of dispensaries in Bengal had risen to 198, in the North-West Provinces to 148, in the Central Provinces to 80, in Oudh to 41, and in the Punjab to 120. Notwithstanding the larger number of institutions, the total number of persons who resorted to them was much less in Bengal than in either the North-Western Provinces or the Punjab. The proportional cost to Government was now only 34·3 per cent. of a total of Rs. 3,10,886, subject to correction for medical stores.

In 1878 there were 248 dispensaries in Bengal, and there has been a further addition in the year under review. In 1878 the number in the North-Western Provinces and Oudh was 199, in the Central Provinces 78, in the Bombay Presidency 174, and in Madras 165. Still the number of people who accepted relief, even as recorded in total, was much smaller in Bengal than in either of the other administrations. In 1879 the number of dispensaries was 255, and the number of sick who attended was still smaller than in 1878.

14. That this rapid extension of dispensaries has far exceeded the Government means of doing real good is open to no doubt, as it must also, I fear, be admitted to have exceeded the desire of the people for such help as has been offered them. That unqualified men should be sent to dispensaries, in the earlier years, was inevitable if the dispensaries were to be established. Men were not to be had with even the pretence of knowledge which the schools have afforded in intermediate years. Compounders and others who, in local establishments, had picked up the names of a few diseases and drugs were sent to independent charges as native doctors, to exemplify before the people the superiority of Western science. They were supplied with expensive medicines and instruments that would have sufficed for a London practice; yet it may well be questioned whether in many cases the people did not lose rather than gain under the replacement of their own *kobirajes* by such men as these. Nor is there much to be said of the results which have hitherto attended the passing of the hospital assistant class through the schools and the restriction of recruitment to passed pupils. Inherent faults of training have produced a class of men whose incapacities the Government has heard loudly condemned of late whenever the subject has come forward, and which are noticed as unfavourably as ever in the reports of 1879. Some of the old untaught men remain in the newly-organised service of hospital assistants, which has lost its best members in the removal of the military class; and though it may be true that work has come to be more criticised and judged by a higher standard, and that there has been no real deterioration during the last few years, there is no reason whatever for supposing that the members of the lower service are as yet better than they were. Quite lately, as I shall presently show, there has been striking proof of improvement in the teaching of the largest school where it was chiefly needed, but it may be long before this can tell on the quality of the service. The old members are only removable by death or gross misconduct and, if vacancies occur, it seems doubtful whether the better trained class will be candidates for the small pay now offered them. I am compelled to regard the situation as at the least very unfavourable to further extension of a system under which we present English drugs to certain classes of the people in abundance, but English treatment to very few.

15. I have written without reserve of the defects of the dispensary system, as they have been shewn in the reports and office work of my predecessor, whose knowledge of the subject was wide, and in the records of the sanitary commissioner and civil surgeons in the past year, with the object of indicating the directions in which effort towards improvement should move, where it may be found necessary to prolong the existence of the institutions. It is a more agreeable duty to show how directly recent changes of policy have attacked the worst vices of the system, even though they do

not promise to eradicate them. I have already made mention of improvement in the frequency and quality of inspection by civil surgeons. The first of these points is presented in the following table:—

TABLE No. 5.

| | Daily or frequently. | More than four times. | Four times. | Three times. | Twice. | Once. | Not once inspected. | No information received. | Total. |
|---|---|---|---|---|---|---|---|---|---|
| Inspected by Civil Surgeons, 1879 ... | 50 | 14 | 18 | 46 | 57 | 58 | 11 | 1 | 250 |
| Ditto ditto, 1878 ... | 45 | 14 | 7 | 31 | 63 | 64 | 19 | ...... | 243 |

By the form of inspection report which Dr. Irving introduced, better knowledge has been obtained of the character and fitness of subordinates, and recorded facts have taken the place of vague statements of opinion on points of practice. The revelations have often been unsatisfactory enough, but knowledge even of faults is better than ignorance in such a case; and practical results have followed in removals of hopelessly bad men, and in improvements in order and official work. But inspection works within limits. It cannot test the daily practice of a native doctor, or discover how far the poorer people benefit from it, or penetrate into those relations with other classes which sap the foundations of the system. A visit paid in morning hours may, and too often does, prove falsification of records; it cannot prevent the repetition of it. A note in an inspection report, to the effect that a native doctor is well liked by the people, conveys information which can scarcely come from the people intended; and it means rather, I fear, that he conforms to the wishes and expectations of patrons, than that he fulfils his mission. Inspections are bearing good fruit, but more must not be expected from them than they can accomplish.

16. It is very unlikely that any administrative effort will prevent misappropriation of stores, but it can prevent the State from being robbed thereby, and this will be the effect of recent orders compelling dispensary committees to pay for all medical stores they receive, and extending the classification of dispensaries. By the same orders an effective check is put on careless and extravagant indents which, not long ago, attracted very unfavourable notice.

A system of valuation and account has been adopted under which each indenting officer will be informed of the amount charged for every article supplied, as soon as his indent is passed, and will thus be enabled to keep close watch on the expenditure of his subordinates.

17. The new scheme of a civil hospital assistant class includes the examination of *employés* for promotion, and rank and pay will be determined in some degree by merit. The orders do not disturb present incumbents of dispensaries, but those who do not pass examination will be relegated to the lowest grade and a gradual subsidence of inferior men to inferior positions may be expected. This will probably lead to resignations of some who can well be spared.

18. I have alluded to recent improvement in the education of hospital assistants. The pupils of the Campbell School had shown marked deficiencies in former years. After the examination held a short time ago, unbiassed examiners expressed their surprise at the knowledge and practical aptitude evinced by the pupils of the year, particularly in branches of study in which the deficiency of the class had been most marked before, but which are of great importance to the public service. It should also be mentioned in this place that at the first examination of the hospital assistants held under the new rules in December 1879, 46 candidates passed.

19. The recruitment of the service which has lately taken place has been from the pupils of the Patna, Dacca, and Cuttack schools. The reputation of these schools had been high, for their pupils, though few in number, perhaps because they were few in number, had shown themselves to have been well taught, in the opinion of officers under whom they served. They have the great disadvantage of knowing much less of the English language than is acquired at the Presidency, but men of local birth are wanted in Behar and Orissa, where Bengalis do not succeed. This ground of preferment will still be theirs within the geographical limit; but they must improve in English, for their

professional merits will no longer give them general ascendancy. With 184 civil hospital assistants in charge of dispensaries in 1879 there were 93 who have passed an examination in the English language.

20. During the last few months a considerable number of useless men have been discharged from the hospital assistant class, and others have resigned. The vacancies have been filled, as above, by pupils selected by the heads of schools. This has, to a small extent, improved the service. The real impediments are the large number of ignorant, idle men, who have sagacity enough to maintain a servile allegiance with those who can help them by concealing their worthlessness from superior officers.

21. Heretofore it has been usual when assistant surgeons and hospital assistants have first entered the service, or returned as supernumeraries to the Presidency, to direct them to "do duty" at the Medical College or Campbell Hospital. The duty has been nominal, for their numbers have prevented their being provided with definite employment, and their tendency has been to forget what they had been taught, rather than to gain practical experience. Lately they have been distributed through the institutions of Calcutta and the suburbs, in such number to each as to admit of their taking an active part in its work. By this means men who had formerly been sent to mofussil institutions without any knowledge of their management, will now practice the daily work of hospitals and dispensaries, of lunatic asylums, lock-hospitals, and jails, before they are sent to take charge of them. The Presidency institutions are utilised for the benefit of the service, and assisted at the same time in their internal work.

22. If, therefore, it is necessary to admit that the dispensary system and service have radical defects of origin and working which cannot be removed by any process of reformation, it must also, I think, be acknowledged that recent policy has done much to reduce their mischievous effect to a minimum; while a broad foundation has been laid for such improvement in the quality of the lower medical service as will save it in the future from the reproaches which it has justly incurred in the past, by ensuring that the personal changes which time must bring shall henceforward be changes for the better. I proceed to consider the recorded events of the year in the dispensaries themselves.

TABLE No. 6.

| | In-patients treated. | Out-patients treated. | Total. | Mortality among in-patients per cent. |
|---|---|---|---|---|
| 1872 ... ... ... ... ... | 19,210 | 460,384 | 479,594 | 16·35 |
| 1873 ... ... ... ... ... | 21,143 | 622,724 | 643,867 | 16·31 |
| 1874 ... ... ... ... ... | 24,683 | 660,847 | 685,530 | 16·92 |
| 1875 ... ... ... ... ... | 22,753 | 724,144 | 746,897 | 17·1 |
| 1876 ... ... ... ... ... | 23,757 | 829,804 | 853,561 | 16·96 |
| 1877 ... ... ... ... ... | 23,954 | 875,631 | 899,585 | 17·34 |
| 1878 ... ... ... ... ... | 28,473 | 927,783 | 956,256 | 20·01 |
| 1879 ... ... ... ... ... | 24,847 | 865,995 | 890,842 | 17·78 |

23. The figures in this table have been corrected throughout for the suburban dispensaries. They must, as a whole, be pronounced quite worthless. Although they include the practice of many institutions whose records are probably as accurate as those of a Calcutta hospital, the contribution of the large number of outlying dispensaries affords no indication of real work done. The figures have not in former years been trusted, but lately the sanitary commissioner and civil surgeons have proved their unworthiness. In each inspection report a note is made of the number of patients actually seen by the inspecting officer. It rarely happens, even when the visit covers the hours of attendance, that the number seen approaches the number recorded on the preceding days in a minor dispensary. In one instance, of a large central institution, judicial enquiry has shown the record even of in-patients to be almost, if not entirely, fictitious. If attendance falls off the hospital assistant at once adapts the public health to his figures, and explains them thereby. The sickly year 1878 was represented as being a healthy year for this purpose, and 1879 has been similarly utilised. It is evident that, even if the records were true, such insignificant numbers as they commonly present could stand in no relation to the public health of the neighbourhood, and

I have little doubt that the civil surgeon's note of the persons he sees has already had its effect in reducing recorded numbers. Here, again, I wish to draw a broad distinction between the quality of the aggregate records and the genuine returns of well ordered dispensaries. The work done in some of the latter is most beneficially proportioned to the public need, and the known state of the general health is traceable year after year in their returns. The table shows a reduced number of persons treated, which may be regarded, in its small extent, as an advance towards the truth. The public health of the province has probably been much better in 1879 than it was in 1878. In Calcutta and the suburbs it certainly has been so, as well as in some provincial towns, and the fact appears in the dispensary returns. But no such relation can be admitted in the large number of minor institutions.

24. If the numbers in the final column of table 8 could be taken as an approximation to the truth, they would afford very useful data and indications for further enquiry. As it is the table does not repay analysis; it shows only by a general view of the province how nominal the benefit is from dispensaries to the mass of the people, even when represented in figures which are largely exaggerated. The good dispensaries present contrasts in this respect as will appear hereafter in notes on district institutions.

25. The sex and nationality of patients treated in the dispensaries are shown in the following two tables, in proportions per cent. of the whole.

* TABLE No. 9.

| Sex. | 1877. | 1878. | 1879. |
|---|---|---|---|
| Males ... ... ... ... ... ... ... ... ... ... . ... | 60·92 | 60·51 | 61·71 |

27. This table represents a great deal of office labour, but is almost without value. Even if the figures were true it would serve no useful purpose to reckon their proportions, so long as the totals bear no quantitative relation to public sickness. If they were both true and statistically good, the figures would still have little value, from the inability of most of the hospital assistants to name a disease correctly when they see it. Dr. Harvey draws attention very pointedly to this, and believes that whatever variations of disease may present themselves in his dispensaries, the returns will be the same. Dr. Crombie, noticing that one of his subordinates returned seven cases of fracture as treated by *refracture*, enquired into the practice, and received for answer that the setting of the broken bones was meant.

28. The following statement shows the quantity of cinchona alkaloid sold during the past financial year in the districts. The sale of other drugs had become quite insignificant, and for this and other reasons was stopped in 1879 by order of Government.

TABLE No. 13.

| YEARS. | CINCHONA ALKALOID. | | | | | |
|---|---|---|---|---|---|---|
| | Quantities sold. | | | Value. | | |
| | lbs. | oz. | dr. | Rs. | A. | P. |
| Half-year ending 30th September 1879 ... | 26 | 8 | 11 | 484 | 0 | 8 |
| Half-year ending 31st March 1880 ... | 77 | 1 | 1 | 1,401 | 14 | 4 |
| Total ... | *103 | 9 | 12 | 1,885 | 15 | 0 |
| For financial year 1878-79 ... | 67 | 1 | 8 | 1,252 | 5 | 0 |

* Excluding Jessore district, no return having been received.

The increase over the quantity sold in the previous year is considerable. The appreciation of the drug in the several districts varies largely and appears, like their reception of English medicine generally, to depend much on the degree of confidence with which the people regard the advice of those who put it before them. It is not necessary to produce, this year, the opinions of particular civil surgeons on the cinchona alkaloid, for all who have mentioned it are unanimous in their testimony to the value and efficacy of the drug, and little or nothing is said of objections to its use.

29. The tabular statement of surgical operations will be found in the appendix.

In reporting on the medical institutions of Calcutta, I gave some considerations which led me to refrain from commenting on the detailed statements of surgical operations performed. I contended that operation was but one point in treatment, and that there was no reason why a particular class of cases and their management should be singled out for presentation in an administrative report. There are stronger and more practical reasons against the prominent, indeed the exclusive, notice which has heretofore been accorded to treatment by operation in mofussil dispensaries. I propose to state these reasons fully, because I believe that an important error underlies the doctrine hitherto laid down of the comparative usefulness of British surgery and medicine to the people of India, and of their own estimate of the former; and also that the working of the better dispensaries has been prejudicially affected by the mistake.

30. It has been usual to say that the people have more faith in English surgery than in English medicine and that, therefore, effort should be chiefly directed to the extension of surgical practice. I have never found this to be the case where the two have been equally well represented. On the contrary I have known many natives refuse English treatment because it could not be carried out by medicine. In the reports for 1879, the dispensaries in which operative surgery is most prominently noticed are seen to be the reverse of popular. It is not the fame of the knife that draws sick men in daily crowds to the Indigo-planter's door. When we search among facts and conduct for evidence of the greater influence of British surgery on the people, we search in vain. It may be true that in past years the attention of natives has

been more attracted by English surgeons than by English physicians, because the former have been much more numerous and more in evidence than the latter; and the pupils of our schools have been led to rely on success in operating as the surest road to official preferment. But when the comparative faith of the people in medicine and surgery shall come to be viewed through some other medium than that of the surgeon's predilection, it will probably be seen to govern, and to express itself in, their actions; which, as now regarded, it certainly does not. A surgical operation is sometimes impressive by its visible results, and attracts attention from persons who know nothing of inward ailments cured. But such cases are exceptional, they are not representative, and the tendency of giving official distinction to operative surgery is to create a service on the model of the man who is "very ready with his knife,"—a reputation injurious to the public usefulness of any dispensary. A further tendency is to lessen the interest of subordinate officers in the greater portion of their duty.

31. Where there is attraction in a mofussil medical institution it lies in the reputation of the *person* who conducts it and is a result of the skill that he has manifested, whatever be the branch of his art in which he has excelled. That man is, without any doubt, the most useful to the people who devotes himself to the cure of the disorders from which they most largely suffer and, equally without doubt, those disorders are not to be found, in a rural population, among surgical affections. In such populations, for every case which calls for a surgeon there are scores which need a physician's aid, and the proportion is perhaps larger in India than elsewhere, from the habits and occupations of the people and from climatic influence. There are places, and their number increases yearly, in this country, under the extension of railways and factories, where a surgeon is as much needed as a physician, or even more; but none I think where surgery should be so prominently inculcated as to make medicine seem insignificant. It cannot be right to show our subordinates that, if they would gain approval, they must "lay themselves out for surgical cases," or cases of any other special kind. The service of the people is the object in view, and the attainment of it is greatly impeded when we introduce a passed pupil to a village or a sub-division, and tell him in effect that he is to regard it as a stage for select performances. He should be enjoined to lay himself out for the study of the diseases most prevalent in his neighbourhood and if, when he is treating these, experience of surgical or other special practice shall predominate, he will in time become distinguished as a special practitioner, by the natural process which has produced the class in other countries. Examples of surgical practice are sometimes presented here which are entitled to special notice, as evidence of special capacity, and the record of them is useful as showing where such qualification is to be found if it be required. But these examples occur for the most part where surgical cases naturally abound. They are a result of circumstances, not a product of search: and they, as indeed the whole recorded number of important operations, form numerically so small a fraction of dispensary practice as to prove, at once, the fallacy of the idea that the usefulness of public institutions is to be estimated from them, or materially increased by stimulating special practice in the country at large. The hospitals exist for the people, not the people for the hospitals; but the latter state would suggest itself to any intelligent man who should find particular cases favoured in a dispensary to the disadvantage of the masses.

32. If I am right in believing that the interests of the people are not served by directing attention too forcibly to surgical practice, it becomes the more undesirable to do this when regard is had to the quality of the medical men to whom it is, and long will be, necessary to entrust the charge of rural dispensaries. Many of our assistant surgeons and a few of the hospital assistants are good operators, but a vast majority of the dispensary doctors—the bulk of the lower service in fact—are altogether unfit to be trusted with a knife. The consequence of noting and reporting the performances of these men, under the title of surgical operations, is a series of official records which would try the gravity of the most austere of critics. An infant's gum lanced, or a boil on a labourer's cheek; a loose tooth detached from its last hold on an old woman's gum; a particle of grit wiped out of a cooly's eye; a pea dislodged from a school boy's ear,—these are the things which now, day after day, figure in

inspection reports as minor surgical operations. They are things which should not be entered in a dispensary register at all, still less should they be treated as deserving of special record, to create in the mind of the native doctor a belief that such miserable trifles are an important part of his duty and the material of which official reputations are made.

33. Finally, good surgery has a reason of its own to advance against the exceptional notice of operations. Such notice tends to obscure the fact that in very many cases modern science regards operation as a last resource, as an evidence of the failure of less destructive means. The higher skill and the higher success belong to the man who saves a limb which another would amputate. No operation, however skilfully performed, can compensate for the loss of a leg or an arm that might have been preserved. To applaud the operator and ignore the conservative surgeon is to subvert the order of merit and to discourage the superior work. It is obvious that an administrative report is no place for such technical discussion of particular practice as alone can lead to a just estimation of its merits, and it is therefore, I venture to think, no place for recording particular practice at all, unless there arise cases which bear on questions of public interest.

My object in writing at such length on this topic is not to discourage operative surgery, but to relieve the practice of medicine from the discouragement hitherto laid, by implication, upon it.

34. The money assets of the dispensaries in January 1879 consisted of invested capital to the amount of Rs. 6,50,231 and of floating balances amounting to Rs. 1,08,685. It will be remembered, if these figures be compared with those of 1878, that they include the assets of the suburban dispensaries.

35. The financial condition of every institution is set forth in Table V in the appendix, and a summary statement is given below:—

Here again I would invite attention to a point which has been indicated in my report on the Calcutta medical institutions, viz. the essential faultiness of a form of account which includes capital and revenue in one total of income. I have endeavoured to prepare a separate statement of capital and revenue, but the returns, in which also the standard form is used, do not enable me to do this. At the beginning of the year a certain sum is returned as invested. Whether this sum represents money actually paid for securities, or the par value of the securities, there is nothing to shew; but the latter is probable, in most cases at least, because the value shewn on the 1st January in the current year does not correspond with that shewn as remaining at the close of the preceding year. There is no place among receipts for money withdrawn from investment during the year, yet such withdrawals undoubtedly take place, for stock is diminished at the end of the year, notwithstanding investment of cash balances in the course of it. Money realised in this manner must therefore have been shewn in the account as a part of the sum invested on 1st January, and is thus made to produce its effect on the total as income.

I propose for the consideration of the Government that the form of account be changed; that a separate statement of invested capital be prepared in future showing, in par values, the amount of stock at the commencement of the year and additions made thereto during the year. On the other side should appear the securities sold and remaining. The cash account would shew as revenue sums realised by sale of stock, and as expenditure money paid for stock purchased. Each account would be separately balanced. By shewing par values of securities in the capital account, as these are all presumably Government securities, the income derivable from them in each case will be known, as it would not be if the entry merely repeated the cash paid for stock as already given in the current account.

36. The figures here given are as nearly correct as it is yet possible to make them. This report would have been submitted within the prescribed period, if it had not been for the difficulty of collecting data for a financial statement sufficiently accurate for comparison in future years. This has, I think, been accomplished; for though absolute accuracy and completeness could not be secured from the data procurable, the omissions and exceptions are comparatively few. The valuation statements furnished to the Accountant-General by the Examiner of Medical Accounts have been obtained and used, and from them nearly all the charges on account of articles supplied from the Medical Store Department have been ascertained. The statements, however, have not distinguished the charges for medical stores and for printed papers throughout the year. With a view to a correct total, the items have been included in a single sum. A few dispensaries are not mentioned in the statements, and no values are given in the returns distinguished. The values set against many of the dispensaries are not recorded values. They are calculated by the method heretofore adopted in the office of the Examiner of Medical Accounts in dealing with combined indents. Such an indent shows the aggregate requirements of several institutions—the issue is valued in one total, and the charges distributed rateably on the numbers of patients returned from each. A further inaccuracy arises in the case of some first class dispensaries, from the impossibility of separating medical stores from books and forms. Both have been shown

against Government, but medicines have been chargeable to dispensaries. Whether, in time past, books and forms have been paid for privately in such cases, as well as medicines, I cannot say; but they will not be so under recent orders. I should have been glad if it had been possible to present a separate account of these items, that the Government might have had further evidence of the great loss of money on printed papers. I am however in a position to say that, in 1879, for the single item of out-patient tickets, the charge to the Government Bengal considerably exceeded Rs. 20,000. With the knowledge now obtained of what is required for an exact statement, there does not appear to be any point of information which will not be promptly forthcoming under the method recently introduced by Government, provided that district accounts are prepared and settled by Civil Surgeons and Collectors as soon as stores are distributed and valuations presented to them.

37. The Government paid in 1879, on account of salaries to dispensary officers, Rs. 1,07,209. The sum reported in 1878 was Rs. 1,03,663, in which nothing was included for suburban dispensaries. These cost for salaries Rs. 6,681, making the comparable sum in 1878 to be Rs. 1,10,344. To the Medical Store Department there was paid for all supplies a sum of Rs. 50,136. In 1878 the sum reported was Rs. 20,876, but, as stated by my predecessor, the reckoning was worthless. In 1879 a total sum of Rs. 4,705 was carried to credit in the Department of Medical Accounts for articles returned into store. These articles in some cases bore a higher value than the stores issued to a dispensary during the year. The income derived from the police, from sale of medicines, and from special allowances, was less in 1879 than in 1878. The apparent increase in the total Government expenditure in 1879, viz. Rs. 25,276, would be converted into a decrease by showing the entire cost of medicines, &c., which was only partly shewn before.

From other sources income increased under every head except that of local funds.

38. Expenditure on establishment increased from Rs. 2,53,863 to Rs. 2,64,288. On bazar medicines it fell from Rs. 11,431 to Rs. 10,830. On Europe medicines it was Rs. 61,003 in 1879. On diet there was a fall from Rs. 41,951 to Rs. 37,441. On miscellaneous items from Rs. 47,374 to Rs. 33,142; these reductions accompanying reduced numbers. For buildings and repairs the charge fell from Rs. 32,237 to Rs. 29,717.

39. Table No. XVI explains the difference between the capital amounts shown at the close of the last year and those now shown as at credit on 1st January 1879. The difference is Rs. 31,204. In the amount, viz. Rs. 7,03,211, shown as remaining in 1878, there should have been included the sum invested during the year, or rather the par value of the securities purchased should have been so, presumably Rs. 25,000. Adding to the total the money said to be actually paid for securities, we have Rs. 7,27,712, which differs by Rs. 31,204 from Rs. 7,58,916. One dispensary, which showed a balance in 1878, was abolished, and its amount contributes Rs. 101 to the difference. The Bisipara return has not been received, and its balance, Rs. 108, tells in the same direction. There is a third minus difference produced as below which amounts to Rs. 3,878. The plus differences aggregate Rs. 35,291, in consequence chiefly of the inclusion of the suburban dispensaries. The balance is precisely Rs. 31,204.

TABLE No. 16.

| | | Rs. |
|---|---|---|
| 1. | Dispensary abolished, which shows a balance in 1878, and not in 1879 ... | 101 |
| 2. | Ditto excluded, return not being received, which shows a balance in 1878, but not in 1879 ... ... ... ... ... | 108 |
| 3. | Dispensaries which show a difference between 1878 and 1879 ... ... | 3,878 |
| | | 4,087 |

| | | | — 3,878 | | |

40. Having, in this report, stated very fully the reasons which lead me to believe that a large majority of the Bengal dispensaries do not fulfil the purposes which the Government has in view, it is most necessary that I should distinguish those which give evidence of genuine and useful work. The following remarks are suggested by the opinions of inspecting officers as expressed in their reports, and by the facts recorded and more or less attested in the returns.

### Burdwan Division.

Hooghly.

41. The Imambarah Hospital is highly spoken of. It is said to be well served by the assistant surgeon in charge, and is daily visited by civil surgeon.

*Dhuniakhally Dispensary* is reported to be useful, and the civil hospital assistant to work well.

Midnapore.

*Sudder Dispensary.*—A large institution. Some decrease of attendance in 1879, ascribed, and with much probability, to general health.

*Rathgorah.*—Supported by the estate of the Rajah of Mysadul, and promises to be useful. It is well situated. The same must be said of *Ghatal* and *Tumlook* Dispensaries. Much attention has been given by the civil surgeon to the dispensaries and to the correction of irregularities.

Burdwan.

*Sudder Dispensary* is managed by an excellent medical officer (Assistant Surgeon Dinobundho Dutt), who does his work thoroughly well, and takes a warm interest in all the affairs of the institution. Nothing calling for special comment is noted of the other district dispensaries.

Beerbhoom.

The dispensaries at Soory, Hetampore, and Ryepore all show good attendance. The attendance at Soory is large. It probably has a good deal of personal supervision from a civil surgeon, who interests himself greatly in his dispensaries.

Bankoora.

The dispensaries in the Bankoora district are said to be fairly attended. Mr. Anderson, the Magistrate, has a keen sense of the worthlessness of returns, and is doing for these institutions what he has already done for the vaccination department.

### Presidency Division.

24-Pergunnahs.

42. The dispensaries of this district have received the most assiduous attention from the civil surgeon during the year, and the effects of it have been very marked.

*Alipore.*—This dispensary changed hands during the year, and attendance rose largely, till in December the average number of in-patients was 11. There is now room for 16. Out-patients similarly increased. The place is crowded every morning, where formerly only a few cases were to be seen, yet the year was much more healthy than 1878. Surgical practice has increased with the rest; medicines have cost less; Government has been relieved of servants' wages and all contingent charges; and so much has been done in collecting money that the dispensary was Rs. 720 richer at the end

than it was at the beginning of the year. The civil surgeon has visited the place almost daily. The committee met only seven times, but they have always responded to special calls.

*Arratoon Apcar Dispensary.*—The founder takes much interest in its working; it was frequently visited by the civil surgeon, and the attendance has again increased. The municipality has contributed, but the residents and beneficiaries have given no money help to the founder. The committee is not active, but Mr. Apcar is described as a committee in himself.

*Harinavi.*—This dispensary is favourably mentioned. Hospital Assistant Sirish Chunder Roy is described as clever, painstaking, and popular, but extravagant in his demands for drugs. Attendance increases.

*North Suburban Dispensary.*—Here I think is an instance of too exclusive regard for the knife. Operations have increased, but general numbers have fallen steadily, not varying with the public health.

*Shumbhonath Pundit Dispensary.*—The institution is popular and useful. Its figures correspond with known events.

Concerning the remaining dispensaries of the district there is nothing for special notice. Dr. Harvey records some lamentable examples of ignorance on the part of hospital assistants. He remarks on the worthlessness of dispensary statistics, and will not attempt to suggest conclusions on the subject of prevailing diseases from the list presented to him. He discredits altogether the returns of surgical operations from outlying places. In a separate communication Dr. Harvey relates the following, which is interesting, to say the least of it:—" Although not under me in any way, and neither recognized nor aided by Government, I should like to call attention to a dispensary established by the Municipality of Bagjulla, near Dum-Dum. It was started of their own motion, and shows that occasionally at least the need for such .an institution will lead to its establishment. It has taken the shape of a grant of Rs. 20 a month to a hospital assistant named Habibullah, a private practitioner, who sees the patents at his own dispensary and provides the medicines he considers necessary at his own cost. He is a good man, and under him the dispensary is evidently a success; but the plan has obvious objections and might easily be abused. Eight hundred and and twenty-seven cases were treated during the year, and when I visited the place there was a good supply of medicines and instruments, all neatly kept and very clean." There are objections no doubt, but if all the village dispensaries in Bengal had grown from such sound germs as this, the general opinion of them would take a very different form from that which it has taken.

Nuddea.

In this district the Natuda Dispensary, which owes its income mainly to a private endowment, appears to be useful to the people from the figures; but it was only once visited by the civil surgeon in consequence of floods.

Moorshedabad.

*Berhampore Dispensary.*—The civil surgeon speaks very highly of the medical officer in charge. The dispensary appears to be useful, and has been liberally supported during the year. The attendance is good.

The Moorshedabad *City Dispensary* is also largely attended and reported to be well conducted.

*Azimgunge.*—Founded by a native gentleman and liberally supported by him. It is said to have more applicants for admission than it can receive.

*Lalgola.*—Another private foundation, most liberally supported and supplied by the founder, and said to be well conducted by the medical officer in charge.

*Jungipore Dispensary.*—Built and equipped by two wealthy gentlemen. It is reported to have a large attendance.

*Kandi Dispensary* is also reported to be largely attended and well conducted.

It would appear from the report that, in this district, native gentlemen are actuated by a generous rivalry in the liberal provision they make for the sick-poor, and that the latter show full appreciation of their liberality. In some cases medical officers are furnished to profusion from private purses with the appliances of their art.

## Rajshahye Division.

Dinagepore.

43. The Sudder Dispensary and that at Raigunge are favourably mentioned by the civil surgeon, but the report is wanting in definite facts. The Sudder Dispensary being constantly visited by Dr. Mokerjea is doubtless useful It is argued that more dispensaries are needed in this sickly district, but the small use that is apparently made of the existing institutions does not support the opinion.

Rajshahye.

The Beauleah and Nattore Dispensaries are liberally endowed from a private fund. They are both well spoken of by the civil surgeon, who does not generally estimate work by a low standard. Dr. Bensley speaks well also of the Pooteah Dispensary, which is privately supported, and of that at Lalpore, similarly maintained. He writes in high terms of the Bulihur institution, supported with great liberality by Rajah Kristendro Roy, and practically controlled by him. Of the others Dr. Bensley has not much to say. He evinces great interest in the work, but is not satisfied with the number of visits he is able to give to the institutions. Locomotion is difficult and tedious in wet weather, and he cannot leave his station for prolonged periods. The proprietary classes in Rajshahye have taken a very prominent part in maintaining medical charities.

Bogra.

The Bogra Dispensary is improving in usefulness, but is very badly supported by the residents. The Magistrate's endeavours to collect subscriptions are not successful. Very little can be said of the district dispensaries, though two of them are privately supported.

Rungpore.

The two town dispensaries of Rungpore return large numbers, but the civil surgeon seems to doubt the figures of one of them, viz. Mahigunj. Several outlying dispensaries also return high numbers, but some of the highest numbers occurred in places only once visited by the civil surgeon.

Darjeeling.

The station dispensary seems very useful on the testimony of both civil and medical officers. The establishments at Kurseong and Phansidewah seem very necessary. The Kalimpong dispensary is new.

## Dacca Division.

Dacca.

44. The value of the Mitford Hospital needs no representation here.

The three dispensaries of Maloochi, Manickgung, and Baliati are all in the same sub-division. The work of the three could well be compassed by one, and easier supervision might render the returns more exact than they appear to be at present. The Baliati Dispensary, however, is privately maintained.

The *Joinsher* Dispensary shows good figures, but if the civil hospital assistant's numerical statements are of the same quality as his surgical returns, the less said of them the better. Moreover the dispensary was not inspected during the year.

Mymensingh.

The Sudder Dispensary and that of *Ramgopalpore* are very favourably mentioned by a civil surgeon who devotes himself to the work, as is that of *Netrokona*. The attendance, however, is not large in either.

The *Karatia* Dispensary is privately supported and seems to be well appreciated.

The *Ambaria* Dispensary is liberally supported and promises well. Of the *Pawsey* Dispensary the same must be said.

Of the rest of the fifteen dispensaries in the district Dr. Moorhead has not much to say. He judges from a high standard however. The proprietary classes of Mymensingh are certainly not backward in supporting the charities. The district is very large, some of the dispensaries are 80 miles from the station, and some are accessible only in boats. Not one has been left uninspected during the year, but two visits are scarcely possible to all of them.

## Orissa Division.

45. The General Hospital, Cuttack, is a valuable institution, both as affording medical relief and serving for clinical instruction in a school whose pupils are admirably taught. It has a Branch Dispensary in the town for out-patients, and large annual attendance is recorded. The superintendent reports favourably of the medical officers.

Cuttack.

The *Dhenkanal*, *Dhurmsala*, *Jajipore*, and *Kendrapara* Dispensaries are useful institutions. The first two are privately supported and much more largely attended than the others. Dhenkanal is the only institution of the kind in a wide extent of hill country; Dhurmsala and Jajipore are pilgrim hospitals chiefly.

The Bissipara Dispensary is beyond the reach of inspection. It would involve an absence of fifteen days from the station.

Pooree.

The three dispensaries in this district appear to be useful, that at the central station particularly so, but attendance varies chiefly with the numbers of pilgrims visiting the place, and progress cannot be inferred from it. The central institution, however, is visited daily by the civil surgeon, and the attendance of the fixed population appears to increase.

Balasore.

The civil surgeon is sanguine that both the Government Dispensary and that of Rajah Shamakund Dey will prove useful. The *Bhudruck* Dispensary shows larger attendance.

## Patna Division.

Patna.

46. The *Bankipore* Hospital is a valuable institution. It serves for clinical teaching in the school.

The *Patna City* Dispensary is very largely attended and evidently well managed.

The *Behar* Dispensary is well attended and well spoken of by the civil surgeon, and the same is true of the dispensary at *Barrh* and of that at *Dinapore*.

Gya.

The dispensary in the town does not show so large an attendance as might be expected, and those in the interior have very small numbers.

Shahabad.

The Arrah Dispensary is very largely attended, and to all appearance well appreciated.

The *Doomraon* Dispensary is useful and popular. It is supported by the Maharajah.

The attendance at *Jugdispore* is also large, but the civil surgeon does not seem satisfied with the figures. The hospital assistant's explanation meets the case, if it be true to fact.

The *Sasseram* Dispensary also returns a fair number of patients, as does that of *Buxar*.

Durbhunga.

The *Raj* hospital is a fine institution, supported by the Maharajah, and is very valuable to the people. The report on the district dispensaries is meagre.

Mozufferpore.

In this district the *Hajipore* Dispensary is the only one which seems to be held in any estimation locally.

Sarun.

The *Chupra* Dispensary is well conducted and attended, and the assistant surgeon in charge most highly spoken of. The *Hutwa* Dispensary, supported by the Maharajah, is another valuable charity. The minor dispensaries of the district return fair numbers.

Chumparun.

The *Motihari* Dispensary receives large numbers, and if goitre cases be excluded, for which the remedies are sold largely in the bazar, the attendance increases.

The *Bettiah* Dispensary seems useful, but is very badly supported by residents, owing its continuance mainly to the Maharajah.

BHAGULPORE DIVISION.

Monghyr.

47. The *Sudder* Dispensary shows some increase of attendance; it is used as an almshouse to some extent. It is apparently well served and useful.

Purneah.

The Station Dispensary is attended by very few. Surgical practice is said to predominate, but it does not seem to make the dispensary popular. A branch dispensary is contemplated, but it seems inadvisable to establish it until the existing one shows more evidence of being appreciated.

Maldah.
Sonthal Pergunnahs.

Of the dispensaries in these districts and their usefulness to the people nothing can be said that is satisfactory.

CHOTA NAGPORE.

Hazaribagh.

48. The Station Dispensary returns a fairly good attendance, but the figures were shown by Dr. Birch to be largely fictitious in the course of a judicial enquiry into frauds discovered.

Lohardugga.

The dispensaries at Lohardugga and Palamow show small attendance; those at Echak and Burhee are useless to the people; at Chuttra the number is larger, but decreasing.

Manbhoom.

The Purulia Dispensary is well attended, and the support from local subscriptions good.

I have the honor to be,

SIR,

Your most obedient servant,

A. J. PAYNE, M.D.,

*Surgeon-General for Bengal.*

J. A. R.—Reg. No. 1198J.—250—7-6-80.

The principle upon which the classification of dispensaries in Bengal is based will be understood from the following extracts from the Manual of Dispensary Rules (of 1872), of which an abstract is given in the foregoing report :—

"The following are the rules under which in future Government aid will be given to dispensaries and small charitable hospitals.

*Rule I.*—Dispensaries and small charitable hospitals will be divided into three classes. Class I will include such as are virtually private and independent of Government aid. Government will, however, if the subscribers desire it, provide medical inspection and supervision for such institutions, and give European medicines at cost price on the following conditions: (1) that the medical officer appointed by the subscribers be a duly qualified practitioner, *i.e.*, licensed or certified to be qualified by a recognized medical college or school, and not a dismissed servant of Government; (2) that the returns required by the Medical Department be regularly submitted—Government supplying all forms, registers, &c., free of cost. Any institution accepting these conditions is at liberty to have the services of a Government servant to be a medical officer; and if the appointment be approved by the Surgeon-General of Bengal, such officer will retain his rights to leave and pension.

"*Rule II.*—Class II will include dispensaries in wealthy neighbourhoods, and such as have large endowments. Government will aid this class by granting medicines and instruments free of cost, as well as the requisite registers and forms. The medical officer of the dispensary may be nominated by the subscribers, subject to the approval of the Surgeon-General of Bengal, and his salary will be paid by the dispensary. If a Government servant, his service will count towards pension, and he will be entitled to leave under the rules of his service.

"*Rule III.*—In class III will be included all such dispensaries or charitable hospitals as need more liberal assistance. To these, in addition to the aid above specified, a portion, ordinarily half, of the salary of the medical officer will be allowed. In order to regulate this salary, dispensaries, &c, aided under class III will be divided into three grades, according to the standard of medical skill and experience which the supporters desire to obtain and are willing to subscribe for.

"(1). Class III, grade 1, will include all dispensaries whose guaranteed local income shall amount to not less than Rs. 120. To these an Assistant Surgeon will be appointed by the Surgeon-General of Bengal, who will draw not less than Rs. 120 per mensem, half of which minimum salary, or Rs. 60 monthly, must be contributed from the dispensary funds.

"(2). Class III, grade 2, will include all dispensaries whose guaranteed local income shall not be less than Rs. 60 and not above Rs. 120 a month. To these a Civil Hospital Assistant will be appointed by the Surgeon-General of Bengal, who will draw not less than Rs. 50 per mensem, half of which minimum, or Rs. 25 monthly, must be contributed by the dispensary funds.

"(3). Class III, grade 3, will include all dispensaries whose guaranteed local income shall not be less than Rs. 40 and not above Rs. 60 per mensem. To such dispensaries a Civil Hospital Assistant will be appointed by the Surgeon-General of Bengal, who will draw not less than Rs. 30 per mensem, and half of this minimum or Rs. 15 monthly must be contributed by the dispensary funds.

"Before sanctioning the establishment of a dispensary of any grade under class III of these rules, the Government will require either a legal guarantee, in the Form A annexed, of the minimum subscription of the class of institution proposed, or an undertaking by the local municipality to make good that amount. When a guarantee is given, it should be executed by one or more substantial residents or by the members of the proposed committee of management. Formal guarantees will not be required from municipalities.

"*Rule VII.*—At all sub-divisions where there is no regular dispensary, but where a sum of not less than Rs. 15 can be raised by local subscriptions for providing the necessary establishment and purchasing bazar medicine and other articles, the Civil Hospital Assistant of the sub-division will be required to afford medical aid to all poor people who may apply for relief. Rs. 10 per mensem will be allowed by Government to the Civil Hospital Assistant as remuneration for the extra duties imposed on him."

STATEMENT No. II.

*Showing the number of In door and Out-door Patients treated in the dispensaries of Bengal during the year 1879.*

# MEDICAL & MUNICIPAL DEPT.

## MEDICAL.

CALCUTTA, THE 28TH JUNE 1880.

## RESOLUTION.

READ—

Report on the Charitable Dispensaries under the Government of Bengal for the year 1879.

The Lieutenant-Governor is glad to acknowledge the punctuality with which this excellent report has been submitted. It is satisfactory to find that Civil Surgeons have at length been induced to forward their returns within a reasonable period after the expiry of the year to which they relate, and the Lieutenant-Governor trusts that it will never again happen that the report for one year only reaches the hands of Government when the report for the following year is nearly due.

2. There were, including the four institutions in the Suburbs of Calcutta, 248 regular dispensaries at work on the last day of 1878: nine were added during the year and two were closed. There thus remained 255 on 31st December 1879. In addition to these, four temporary dispensaries for the treatment of endemic fever were open during a part of the year in the districts of Balasore and Midnapore. They were all closed before the end of the year. Of the total number of dispensaries, 155 received in-door patients, against 154 in 1878. These figures, however, taken alone, would convey a very exaggerated view of the extent to which in-door medical relief is actually afforded. Not fewer than 76 of the dispensaries received less than 100 patients during the year, 122 received less than 250, and only seven received more than 500.

3. To four of the dispensaries medical officers had not been appointed when the year closed. Of the remainder, 65 were in charge of a Surgeon and Assistant Surgeons, one in charge of a medical graduate unconnected with Government service, and 184 in charge of civil hospital assistants. This is an improvement on the previous year, when only 58 dispensaries were in charge of officers of the higher grade. Meetings of Committees were more frequent than in the previous year. The percentage of cases in which the Committees met ten times or more frequently was 17 against 11 in 1878, while the percentage of cases in which no meetings were held, or no records of meetings were kept, was only 15 against 22.

4. It is possible, from an examination of the returns, to form some opinion of the qualifications of the officers in charge of the dispensaries, of the financial position of the institutions themselves, of the rates of mortality among in-door patients, and of the amount of interest displayed in their management by the Committees nominated to supervise them. But unfortunately this is nearly all. That the returns of the numbers relieved, and the classifications of the diseases treated, are unreliable, has long been suspected. Their utter worthlessness for any statistical purpose whatever has now been established beyond doubt. The orders of Government under which the Sanitary Commissioner and Inspector-General of Jails have inspected mofussil dispensaries have begun to bear fruit. Civil Surgeons have paid greater attention to this duty, and the number of dispensaries inspected by them more than twice in the year was 123 against 97 in 1878. Finally, Dr. Payne bears testimony to the good results which have followed upon the introduction of a regular form of inspection report by his predecessor, and the attention given by Dr. Irving to the reports received. These measures have led to the suppression of many irregularities. Nevertheless Dr. Payne rightly points out that inspections necessarily desultory, must also necessarily be superficial. They cannot touch the essential working of a dispensary, and such evidence as they afford of its actual efficiency as a charitable institution must always be derived in great measure from those who do not

belong to the class for whose relief it is presumably maintained. Negatively, however, inspections have in many cases proved much. Inspecting officers, whose visits have not been anticipated, have frequently found that the number of patients attending for relief was considerably below that recorded as relieved on the previous day. In one case judicial enquiry showed that the dispensary records of the number, even of in-patients, were in great measure, if not wholly, fictitious. It is of course the case that many well-managed dispensaries present correct returns; but in the face of these disclosures, it is obviously impossible to place any reliance whatever on the aggregate returns of the 255 dispensaries at work in 1879. The Lieutenant-Governor will therefore merely notice briefly the figures submitted, observing that the decrease shown in 1879 over 1878 is probably owing less to any improvement in the general public health than to improved inspection and closer scrutiny of the records.

5. The gross numbers of persons returned as treated in the dispensaries in the interior and in the Suburbs of Calcutta during the past five years are—

| | |
|---|---|
| 1875 ... ... ... ... | 746,897 |
| 1876 ... ... ... ... | 853,561 |
| 1877 ... ... ... ... | 899,585 |
| 1878 ... ... ... ... | 956,256 |
| 1879 ... ... ... ... | 890,842 |

A comparison of the number of alleged patients with the known population of the different districts brings out some curious results. The area and population of Maldah are to those of Purneah, little more than as 1 to 3: each district has 3 dispensaries: yet Maldah claims to have relieved 1·69 of its inhabitants, while Purneah, certainly not a healthier district, can show only ·29. Other instances of a similar character might be quoted. A glance at the statement also shows that in many cases the daily average of attendance is only one or two. Mymensingh shows four dispensaries with less than 800 patients in the year. Tipperah shows five with less than 1,000, and two with less than 500. It will hardly be pretended that in such cases the amount expended in maintaining the dispensary is really a contribution to charitable relief. The proportion of the number said to have been relieved, to the total population of the different divisions, ranges from 2·51 in Burdwan and 2·29 in the Presidency Division to ·65 in Chittagong and ·57 in Chota Nagpore. How much of this represents actual dispensing of medicines, what proportion of the number actually treated represents fit objects of charitable relief, and what proportion this again bears to the number who really required charitable relief, cannot be even approximately estimated.

6. It is equally hopeless to attempt any deduction in regard to the condition of the public health from the statements of the diseases under which the persons said to have been relieved are said to have suffered. Statistics, originally valueless, are still further condemned by the uselessness of the statements of classification. The ignorance of many of the medical officers is here superadded to their want of arithmetical accuracy. Not only would the gross figures, even if correct, have no useful statistical basis, but untrustworthiness in the totals is aggravated by uncertainty in the details. Dr. Harvey, who has inspected numbers of dispensaries both as Sanitary Commissioner and as Civil Surgeon, declares that, "whatever variations of disease may present themselves, the returns will be the same." Dr. Crombie found that one of his subordinates, after setting a broken bone, habitually entered the case as one of "re-fracture." Any examination of such returns would plainly be waste of time.

7. The returns showing the sex and nationality of the patients present few fluctuations. The percentage of males shows an increase of about one between 1877 and 1879. Those of females and children show a decrease of two and an increase of one and a quarter respectively. The exact figures are these—

| | Males. | Females. | Children. |
|---|---|---|---|
| 1877 ... ... ... | 60·92 | 20·31 | 18·76 |
| 1879 ... ... ... | 61·71 | 18·27 | 20·02 |

There is a decrease from 33·21 to 32·02 among Mahomedans, and an increase from 64·87 to 65·83 among Hindoos. In other classes the figures are nearly constant.

8. The death-rates are decidedly high. Out of 71 dispensaries receiving in-door patients in Bengal Proper, 36 had a death-rate exceeding 16 per cent, 26 exceeding 20 per cent, and 16 exceeding 25 per cent. Out of 58 in Upper Bengal, 22 show 16 per cent and upwards, 15 more than 20 per cent, and nine more than 25 per cent. In Eastern Bengal, out of 26, seven had more than 16 per cent of deaths, four more than 20 per cent, and three more than 25 per cent. Dr. Payne states that the explanation is the same in all districts: that a native will often not resort to a hospital until he has tried all other means of recovery and found them fail. This is no doubt true as a general statement; but it is only sufficient to explain a generally high death-rate. It will not explain great variations in the degrees of high mortality. Some of the dispensaries always appear high on the list, because they lie on the great pilgrim routes, such as Raneegunge, Gurbetta, Midnapore, Balasore, Pooree, Gya, and Deoghur; or because they receive labourers travelling to Assam, such as Goalundo and Rajmehal. Others appear occasionally, because the number of patients is so small that the proportions are seriously affected by circumstances which elsewhere would hardly be appreciable. Thus Magoorah headed the list in 1878, because five out of 6 in-door patients died; in 1879, Jamalpore appears with a death-rate of 100 per cent, because only two patients were admitted and both died. But these considerations will not altogether explain why Barrackpore dispensary had a death-rate of 60 per cent in 1878 and 51 per cent in 1879, or why more than 25 per cent died in both years in Hooghly, Bogra, Naraingunge, and Patna.

9. The number of major operations performed by Civil Surgeons as Superintendents of dispensaries was 492 against 426 in the previous year. The number performed by the medical subordinates was 2,110 against 2,274. The total number of minor operations shown in the return is 46,683. Dr. Payne discusses at some length the propriety of directing special attention to surgery in dispensaries and hospitals in the interior. In the Resolution on the report for 1877, the Lieutenant-Governor made the following observations:—"The Surgeon-General justly remarks that the natives of this country have much greater confidence in European surgery than in the European system of medicine. Some medical officers no doubt take more interest in the duties of a physician than in those of a surgeon; but it is to be regretted that by a neglect of surgery they should lose one great means of obtaining the confidence of the people." The Lieutenant-Governor is at a loss to see what room for misunderstanding there is in this remark, or how the policy which it inculcates can be interpreted as recognizing European surgery as more important to the people of India than European medicine. Sir Ashley Eden agrees with Dr. Payne in much that he has written, but he differs from him in his conclusion. It is of course the case that "that man is, without any doubt, the most useful to the people who devotes himself to the cure of the disorders from which they most largely suffer, and, equally without doubt, those disorders are not to be found in a rural population among surgical affections." It is equally true that "in such populations, for every case which calls for a surgeon, there are scores which need a physician's aid, and the proportion is perhaps larger in India than elsewhere, from the habits and occupations of the people, and from climatic influence." The Lieutenant-Governor is not aware that this has ever been denied. He himself has no doubt that the physician is more needed among the people than the surgeon; but it is precisely in the hope that the people may be induced to bring their disorders for cure by English-taught physicians that he would urge that as much attention as possible may be given to surgery. He advocates, not the neglect of medicine in favour of surgery, but the employment of surgery as a valuable auxiliary of medicine. There is a native system of medicine: there is practically no native system of surgery worthy of the name. In any serious epidemic the people are ready enough to seek European aid; but in ordinary cases of sickness there is an unwillingness to depart from the native system of treatment, except perhaps to the extent of using some European drugs, of which the efficacy has been thoroughly accepted. Where surgery is needed, however, the case is very different. No man requiring surgical aid will hesitate about seeking it at the hands of a European-taught surgeon, if such aid is known to be available. The Lieutenant-Governor has not the least doubt

that every surgical operation skilfully performed has its effect in inducing confidence in European treatment generally, and in popularizing European medicine as well as European surgery. This, however, not only does not presuppose a neglect of medicine, but postulates its assiduous cultivation. The fame of a successful operation spreads and brings the skill of the Surgeon prominently before the people of the district, and induces them to believe that his success in one case promises success in others. The Lieutenant-Governor is satisfied that there is much more hope of the European system of medicine making its way among the people, if it goes hand-in-hand with European surgery, than if it walks alone. If medical subordinates exhibit a tendency to neglect medical for surgical cases, it will rest with the Civil Surgeons to correct them and to insist that the supreme object of popularizing European medicine shall constantly be kept in view. The incompetence of many of the medical subordinates is a fact which must be considered with the general question of the working of these institutions; it is, however, of less importance in connection with the subject now under discussion than in regard to any other, as very many of the outlying dispensaries show no major operations, and most of the remainder very few. There is much truth in what Dr. Payne says about the importance which some ignorant men may seek to attach to very petty operations, and Civil Surgeons will do well to discourage a striving for mere statistical superiority. The Lieutenant-Governor cannot agree, however, that all of these should be excluded from the registers, and it is obvious that, if they are to be entered at all, they cannot appera as medical cases, but must appear under surgery. So long as the details which Dr. Payne has reproduced are supplied, there can be no danger of their importance being over-estimated by those who have to consider the returns.

10. On the general question of the policy to be pursued by Government in regard to the maintenance of the present system of dispensaries, the Surgeon-General's remarks are sound and practical. There can be no doubt that the increase in the number of dispensaries of late years has outstripped the actual demands of the people for charitable relief and the power of Government to supply efficient medical subordinates. In 1860 there were only 57 dispensaries in Bengal. In 1864 rules were laid down under which Government assistance would be granted. In 1865 there were 86 dispensaries; in 1867, 135; in 1873, 198; in 1878, 248; and in 1879, 255. It is not possible to doubt that in many cases the dispensary had its origin in the desire of an individual to earn a reputation for public spirit, or in the hope of the promoters to obtain a supply of European medicines in return for a small subscription. These are the institutions of which the general management is most unsatisfactory. Those, on the other hand, which are known to have been established and to be maintained from motives of genuine philanthropy are admirably administered, and are a source of real benefit to the poor. Dr. Payne's description of the first type of dispensary is not overdrawn—"No sooner has a dispensary been established than the interest of the committee has ceased, and the management has been left to the native doctor. Promises of support and guarantee-bonds have been forgotten with the necessities of the poor which were prominent in words before. Subscribers have refused to pay, frankly declaring that they had expected to receive gratuitous medicine. Members of committee, and even subordinate officers of Government in good position, have been conspicuous among defaulters." What, however, is of chief importance is the inefficiency of a great proportion of the medical officers in charge. As early as 1866 the Inspector-General of Hospitals pointed out the harm done to the repute of European science by ignorant native doctors; and with the enormous increase in the number of dispensaries which has since taken place, the supply of well-qualified men has certainly not kept pace. A liberal supply of expensive drugs and a full equipment of the best surgical instruments have not made up for the inability of the native doctor to make a proper use of them. Sir Ashley Eden quite agrees with Dr. Payne that "the situation is at least very unfavourable to further extension of a system under which we present English drugs to certain classes of the people in abundance, but English treatment to very few." The question is whether any active measures should be taken to contract it.

The Lieutenant-Governor is unwilling to take any such measures, nor does Dr. Payne recommend that he should. The sum contributed by Government towards the cost of establishments alone in these dispensaries was last year Rs. 1,07,209. The Lieutenant-Governor is quite willing to continue to contribute largely to this object, in the hope of thereby gradually extending the genuine European system of treatment among the people. Meanwhile, a careful classification of the dispensaries under the rules recommended by the Medical Committee is being made. It was remarked in the resolution on the last report that the system already in force in Bombay, Madras, and the Punjab, of requiring dispensaries to pay for their own medicines, had been introduced, the drugs being supplied from the Government stores at cost price. In special cases Government will give a money grant for this purpose; but the previous system under which medicines could be obtained free on indent was obviously open to grave abuse, and was not compatible with really careful and systematic administration. A gradual improvement in the staff may fairly be looked for. Under the new rules such hospital assistants as cannot pass the examination for promotion will remain in the inferior grades, while vacancies will be filled by better qualified men. The Surgeon-General reports that there has been a marked improvement in the education at the Sealdah School, and this has already been noticed by Government, while the Patna, Dacca, and Cuttack schools have for some time produced very well taught pupils. The increase in the proportion of Assistant Surgeons in charge of dispensaries has already been noticed. With increased attention on the part of the committees, and closer and more frequent inspection by superior medical officers, it may be hoped that a better state of affairs will be realized than can be said to have hitherto existed.

11. The Surgeon-General rightly draws attention to the awkwardness of the form of statement purporting to show the income, expenditure, and balances of dispensaries during the year. Under the head of "Income" is included not merely the current receipts of the year, but the amount of invested capital on the 1st January, and also the cash or "floating" balance in hand on that date. "Income" in fact is taken to mean "funds available for expenditure during the year." Under the head of "Expenditure" is exhibited all the outlay of the year of every kind, irrespective of the source from which the funds were procured. It includes, therefore, expenditure met from the sale of securities, and money spent upon new investments. The closing columns of the statement, purporting to give the balance on the 31st December, do not represent "funds available for expenditure at the close of the year;" but exhibit under the column of "invested balance" the invested capital of the 1st January preceding, less the value of the securities sold during the year; while the "floating balance" given is the actual cash balance on the 31st December, including any unspent proceeds from the sales of securities. Obviously if "income" is to be taken in the first part of the statement to mean all "funds available for expenditure during the year," the balance of such "income" at the close of the year should include any sums sunk in new investments. At present, however, these only appear under the head of "Expenditure," and have to be added to the opening "balance" under the column of invested capital in the statements of the following year. It would be much simpler to have two distinct statements, one showing the capital account of each dispensary with its losses and gains, and the other the current account showing cash receipts from every source and expenditure on all accounts. The Government of India will be moved to sanction this amendment of the forms.

12. But though the form of the statement is faulty, there is no reason why it should be inaccurate in detail. Nevertheless, it abounds in apparent errors. No less than 41 dispensaries show an income from "interest on investments," though the statement shows that they have no invested capital. Nine show capital invested, but no income from interest upon it. In many cases the amount said to have been realized as interest bears no proper relation to the sum shown as invested; large investments producing small sums, and small investments large sums. Thus Noakholly with Rs. 3,525 invested shows Rs. 3-7 only realized as interest. The Ula dispensary shows Rs. 111 produced by an investment of Rs. 480. It is necessary to bear in mind that in these cases the sum in question had been invested for at least a full year. The returns for

the Kishnaghur district are the most remarkable of all. Out of ten dispensaries, only three are shown to have invested capital; yet eight are shown as receiving interest on investments. Of these Ula, as already has been observed, received Rs. 111 on an investment of Rs. 480; Santipore only gained Rs. 93 on an investment of Rs. 2,000; while Latudah appears as having received Rs. 1,637 as interest, though it is shown to have no invested capital. It is probable that in the last case the amount represents the income from private endowment; but the accounts should be made complete, and their elucidation should not be a matter of guess-work. The Surgeon-General should take due notice of these remarkable figures, and insist in future on Civil Surgeons submitting properly explained accounts.

13. A correct view of the income and expenditure of the dispensaries can only be obtained by rectifying the totals given in the statement after examination of the details.

The income from all sources appears to have been—

| | Rs. | A. | P. | |
|---|---|---|---|---|
| From Government ... ... | 1,72,434 | 8 | 0 | |
| " Local, Municipal, and other Funds ... ... | 96,900 | 0 | 0 | |
| Interest on investments ... ... | 32,594 | 9 | 0 | |
| Subscriptions ... ... | 1,55,383 | 10 | 0 | |
| Proceeds of sale of securities ... | 7,600 | 0 | 0 | |
| | 4,64,912 | | | |
| Opening floating balance ... | 1,08,685 | | | |
| Total ... ...... | | Rs. | | 5,73,597 |

The expenditure was—

| | Rs. | A. | P. | |
|---|---|---|---|---|
| Establishment ... ... | 2,64,288 | 3 | 0 | |
| Medicines ... ... ... | 71,833 | 14 | 0 | |
| Diet ... ... ... | 37,441 | 14 | 0 | |
| Miscellaneous ... ... ... | 33,142 | 8 | 0 | |
| Building or repairs ... ... | 29,717 | 2 | 0 | |
| Invested ... ... ... | 14,968 | 8 | 0 | |
| | 4,51,392 | | | |
| Closing floating balance ... | 1,22,205 | | | |
| Total ... ...... | | Rs. | | 5,73,597 |

Of the Government contribution, salaries were accountable for Rs. 1,07,209, registers and forms and European medicines for Rs. 50,136, and special allowances for Rs. 13,444. The question of the cost of registers and forms will be separately considered. It is satisfactory to observe that the amount of cinchona febrifuge sold in 1879-80 was 103lb (exclusive of unreported sales in Jessore), against 67lb in 1878-79.

14. The Lieutenant-Governor has read with much interest Dr. Payne's commendatory remarks on the dispensaries mentioned in the last eight paragraphs of his report.

By order of the Lieutenant-Governor of Bengal,

COLMAN MACAULAY,

*Offg. Secretary to the Government of Bengal.*

No. 828.

COPY forwarded to the Surgeon-General, Bengal, for information.

Nos. 829-37.

COPY forwarded to all Commissioners of Divisions for information and guidance, and for communication to District Officers.

Nos. 838-39.

COPY of the resolution, together with a copy of the report, forwarded to the Inspector-General of Jails and to the Sanitary Commissioner for information.

No. 840.

COPY of the resolution, together with a copy of the report, submitted to the Government of India, in the Home, Revenue and Agricultural Department, for information.

By order of the Lieutenant-Governor of Bengal,

HEM CHUNDER KERR,

*Offg. Asst. Secretary to the Govt. of Bengal.*

CALCUTTA,
*The* 21*st July* 1880.

C. E. G. & others.—Reg. No. 3227C—378—7-8-80.

# REPORT

ON THE

# CHARITABLE DISPENSARIES

UNDER THE

## GOVERNMENT OF BENGAL

FOR THE YEAR

## 1880.

BY

A. J. PAYNE, Esq., M.D.,

Surgeon-General for Bengal.

Calcutta:

PRINTED AT THE BENGAL SECRETARIAT PRESS.

1881.

# Report on the Charitable Dispensaries

UNDER THE

# GOVERNMENT OF BENGAL,

## FOR THE YEAR 1880.

FROM THE SURGEON-GENERAL FOR BENGAL,

TO THE SECRETARY TO THE GOVERNMENT OF BENGAL,
JUDICIAL DEPARTMENT.

*Calcutta, the 8th June* 1881.

SIR,

IN reporting on the dispensaries of Bengal for the year 1880, I have to express my regret that the presentation of the report has been delayed beyond the period fixed by Government, and that I am now compelled to submit it without the usual financial statements. I have already stated in my letter No. 1725, dated 19th April 1881, the reasons of this delay. The financial statements underwent revision in 1880, and the new forms sanctioned by the Government of India did not reach my office until February 1881. By this time statements in the old form had been prepared by district officers. It was necessary that these should be returned and entirely recast. This was a work of time, and a work which could be only gradually done. As the accounts came under examination district by district, reference was necessary in nearly every case and at every successive stage. I must either postpone therefore for a short time the submission of the financial statements, or submit them incomplete. I have thought the former course preferable. Again, in the year 1880 the system of indenting for medicines was changed. Dispensaries were to pay for all medical stores received, and the requirements of each district were to be included in a single indent, the stores being distributed under the direction of civil surgeons and the charges adjusted by district officers. The district totals were to be checked by valuations made in this office, and the component items to be shown in the annual returns. It was reasonable to expect that in the first year of working some matters requiring adjustment should present themselves which had not been anticipated, and that at the end of the year there should be discrepancies in account. Discrepancy has in fact been almost universal, and has arisen, as I shall show hereafter, very largely from a further cause unconnected with the working of the new system. I need say no more in this place than that explanations of figures have led to a great deal of correspondence since the receipt of the annual returns, and have delayed the production of this report in a manner for which medical officers are not responsible, since nearly all the district reports and returns were presented in the first instance with due punctuality.

2. I fear also the immoderate length of this report will not meet with the approval of the Government. I must plead, however, the impossibility of giving, within the space which suffices for recording the current events of an ordinary year, an adequate account of progress in a year devoted to the reform of the entire dispensary system of the province from its very foundations. And as I have not hesitated, either before or in this report, to state my belief that Bengal dispensaries as a whole have failed to accomplish the objects of Government, I have felt the insufficiency of general terms to point the great distinction that should be drawn between the valuable and the worthless institutions. This has led me to extend my extracts from district reports, so far as to quote from local officers themselves the particulars which illustrate the condition and usefulness of every existing dispensary in the province.

3. During the past year the affairs of dispensaries have occupied more of the time and attention of Government and of this office than all the other branches of medical administration. The Government had already been led to believe that a very large proportion of the institutions in remote places were not fulfilling their ostensible purpose as public charities, and that the contributions of the State to their maintenance were largely misapplied, when the better method of inspection introduced by my predecessor, and the detailed reports of the Sanitary Commissioner, brought forth in 1879 evidence which reduced the belief to demonstration; and the enquiry of the Committee on Medical Expenditure showed the necessity for an entire reform of the system. From that time to the present revision has advanced without intermission. There are few dispensaries in the province whose affairs have not been more or less scrutinized in 1880, and concerning many of them final orders have been passed. The discussion of particular cases has elicited a great mass of information on the abuses to which I drew attention in my last report, and regarding which the Lieutenant-Governor reviewing the report was pleased to observe that its statements contained no exaggerations. I fear it will be said, on the evidence adduced in 1880, that they inadequately represented the state of affairs.

4. The financial condition of dispensaries, with reference to the payments of Government and private individuals, has been considered on the reports of civil officers, and their medical working, in relation to its value and cost, on representations from this office. It has been found that in some places there has been accumulation of invested money while the poor have been unrelieved; that in others promised subscriptions have remained unpaid, and while Government has continued to support the medical officer, he has been rendering no public service worthy of mention; that subscribed funds have been devoted to the payment of servants who have been useless for any legitimate purpose, serving mainly to enable the native doctor to absent himself from his dispensary without causing complaints; that apart from irregular fictitious entries, the attendance of patients has been multiplied designedly and on regular system, in order to present a plausible tale of work; that medicines have been issued confessedly to persons who had no right to them.

5. The admissions that have been made seem to show that in some cases at least abuses have arisen from impenetrable ignorance, and have continued from inability to resist established practice. I will adduce a few instances in evidence of this.

A civil surgeon reports that at his inspection the hospital assistant stated that he had performed no operations during the previous month. He had entered 14 operations in his returns, of which he gave no explanation.

Another civil surgeon reports that attendances are "entered in accordance with the number of days for which medicine is prescribed." *A* attends the dispensary and receives medicine for three days. He is entered as three attendances.

A third civil surgeon says that the same practice had prevailed up to the time of his taking charge in 1880. He adds: "Even yet subordinates do not see the force of the prohibition. One man asks: 'How can I keep a record of the medicines expended?' Another says: 'It makes a small sick list for such a large place.' A third—'The sick will not report themselves every day.'"

In a fourth district, "patients who get two or three days' medicine have been entered daily as if they were attending." Ten such absent patients were entered in the register on the day of the civil surgeon's visit.

A civil surgeon, who takes much interest in dispensaries, records that the number of patients attending on the day of his visit fell very far short of the recorded daily average. The native doctor's explanation was that a great many patients had received two or three days' supply of medicines on the two preceding days. The civil surgeon examined the register and found very little difference in the daily attendance recorded for months previously. He rightly says: "It is very unlikely that such a change would occur suddenly."

A visitor—member of a dispensary committee in another district—"waited at the dispensary from 7 to 8-15 A.M., but found no out-patients. The number of patients said to have been treated on the three previous days was 36, 30, and 38."

In one dispensary the medicines supplied were reported to be sufficient for the dispensary patients, "but not sufficient for the amlah of the Nawab, the supporter of the dispensary."

6. That these have been representative and not exceptional cases there is little reason to doubt; but it is equally certain that the exposition of abuses has been encouraged by the revision which the dispensary system is undergoing at the hands of Government, and by the attention which many of the higher civil officers have given to the work of reform. Some time has now elapsed since orders were issued for the preparation of a new code of rules for the management of dispensaries. A draft was prepared several months ago, but as enquiry moved forward and information accumulated, it appeared that the existing rules would not serve even as a basis for such regulation as had become necessary, and it was determined to postpone the work until every point of constitution and management should have been thoroughly examined. This had not been fully done when the year closed. It is only quite lately that the materials can be said to be complete for the construction of a new code of rules. The work is now in hand. Meanwhile much has been done which has borne directly on the evils indicated in the last and the present reports.

7. With the exception of two or three institutions maintained solely at the cost of Government for State purposes, the whole of the dispensaries of Bengal have begun to pay for the medical stores they expend, and the option has been allowed of obtaining supplies from the Government stores or from private sources. Payment has in a few instances been resisted by committees, but in none that I am aware of has good reason been shown for exemption. On the contrary, in several dispensaries in which at the outset it had seemed that Government aid was required in this particular and money grants had been made, it proved on close enquiry that the grants had not been necessary or beneficial, and a time was fixed for the withdrawal of them. Payment for stores, as I said last year, will not prevent misappropriation of them; but if such things are allowed to continue under the eyes of local governing bodies, the State will not suffer. Where a committee may elect to obtain their supplies from a private druggist they must do so in communication with the civil surgeon. The native doctors' indents on private vendors will not be submitted to this office; but it will be the duty of the civil surgeon to check them and so to protect subscribers from misuse of their money, if they desire or will accept protection.

8. During the past year many dispensaries have been reclassified. In some cases payment for drugs has in effect brought the institution under the conditions of another class, and the transfer will be formally recognized after revision of the rules. In some it has been found that there were sufficient funds to render a Government subsidy unnecessary, and they have passed into the independent class. In some the public usefulness of the dispensary has been nominal, and the advocates of its continuance have been offered the option of maintaining it at their own cost, with the alternative of closure, and have chosen the former. In some the supporters have themselves desired to convert their dispensary into one of the first class, in preference to working it under the new system, and have been allowed to do so. By one or other of these processes a considerable number of dispensaries have ceased in 1880 to tax the State for their support; while the security, such as it was, for their proper management, has suffered no impairment

9. Several dispensaries not previously classified have in 1880 been placed in one or other of the recognized classes. Irregular salaries have thus become less numerous, and progress has been made in the organization of the hospital assistant class.

10. Difficulties arising from unpaid contributions, from bonds unfulfilled, and from negligence of committees, have been met by transferring dispensaries to the care and responsibility of local municipalities.

11. Nine dispensaries which had altogether failed to serve their appointed purpose, which showed no prospect of becoming useful as charities, and which the people of the neighbourhood were unwilling to maintain for themselves, were closed during the year. In one instance the accumulated money was set

apart as the nucleus of a district fund, to meet sudden calls for medical aid. Such calls have not unfrequently in former years been followed by the establishment of dispensaries which, being suffered to remain long after the necessity and the public appreciation had passed away, have served only to enlarge the number and the cost of useless institutions in Bengal.

12. It cannot be expected that false returns of work from outlying dispensaries will be prevented altogether, at least for some time to come. So much, however, has been effected that an approximation to truth seems possible, if the matter receive attention from all concerned. Falsification of annual returns has become easy under the general disuse of the monthly returns which were formerly sent to the Surgeon-General. In the central office the multiplicity of papers forbade all attempts to use these returns for checking annual figures, and an order seems to have been issued by the Surgeon-General, Indian Medical Department, to discontinue the practice of sending the returns to him. This was generally understood as prohibiting the preparation of the monthly returns. Civil surgeons ceased to demand them from their subordinates, and so deprived themselves of their only means of checking annual returns. Monthly returns may be fabricated, and doubtless have been so; but as representing current events, their statements are more open to examination. Great variations of sickness recorded may be tested by information from other sources at the time, or very great uniformity may give rise to suspicion. Prompt enquiry, even if it only show that proceedings are watched, will do much that is corrective; and if it be known that magisterial as well as medical officers are interested, falsification will be reduced to a minimum, as it has already been in the Bankoora district. An order was issued in 1880 that monthly returns should be sent, as formerly, to civil surgeons from all dispensaries.

13. Again, figured returns may, with a little scrutiny, be seen to prove their own fallaciousness. A comparison of total numbers with averages is often sufficient for the purpose. Some village dispensaries return averages of daily attendance which, compared with total numbers of persons, show that the average patient has attended only once. If therefore any patients were treated for illness of ordinary duration, the fact is evidence of fictitious entry in the total. Steps were taken during the past year to prevent the inclusion in an average of any person who has not attended the dispensary or been personated there, and civil surgeons have been directed to note in their inspection reports the manner in which calculations are made.

14. The neglect of dispensary duties by medical subordinates in pursuit of private practice has been noticed in the annual reports, and the fact that public duty is commonly delegated to compounders. This has been proved throughout the year by several points of evidence, and by none more strongly than by the resistance of members of committees to the removal of compounders from institutions which afford no legitimate work for them. The fact that the recorded attendance of patients in a great many places shows that it is largely made up of persons not really ill, or of persons who, being ill, fail to obtain the medical aid they ask for, points in the same direction. There can be no doubt that if the sick poor of a neighbourhood wish to resort to a dispensary, they will be deterred from doing so by finding only an untaught compounder to attend to their wants. It is impossible to say how far this radical defect may have contributed to the failure of dispensaries in Bengal; but it must have contributed largely, for there seem to be but few of the medical subordinates who look upon their dispensary as having any other use than the furtherance of private interests—a view which evidently receives support from others concerned in local management.

15. Scrutiny of establishment was undertaken in 1880 with the primary object of showing that money was wasted. It appeared throughout the province that compounders and menial servants were entertained, for whose existence not a shadow of rational pretext was shown in the work of the dispensaries, and it soon became clear that these people were paid from dispensary funds to keep up a pretence of public work, while the native doctor devoted his time to private families. Civil surgeons were requested to note in each

inspection report the designation and pay of every person employed, and where it was found that there was no justification for retaining a compounder, his dismissal was ordered. In some cases the order was carried out at once. In others it was resisted, and on reference to Government it appeared that I had exceeded the authority of my office in issuing peremptory orders. Meanwhile, however, details of superfluous establishments had been presented to Government in a number of cases which were under consideration. Final orders for reduction had been passed, and the principle was now laid down that in every case where the Government contributes in any form to the expenses of a dispensary, it is incumbent on this department to see that local funds are duly economized. As district by district the whole of the dispensaries are undergoing revision, each instance of money misused will come under notice, while the necessity for reform will continue to be pointed out to dispensary committees on the receipt of inspection reports. I have no desire to impair the usefulness of a village doctor by placing undue restrictions on his private practice. On the contrary, I regard this as a part of his mission. I wish only if it be possible to make him understand that his primary duty is the work of his dispensary, and to make it clear to those who control dispensary funds that it is not a legitimate use of these funds to employ an unqualified person to attend to dispensary patients in order that the native doctor may minister to private families. Revision of establishment will effect so much of correction here that if a native doctor is still able to keep an assistant clandestinely, he will at least be prevented from paying his wages out of money supposed to be collected for charity.

16. Complaints have been received during the year of inconvenience attending frequent change of native doctors in dispensaries, and also of this as a cause of failure. The changes have been due in a great measure to constant applications for leave on private affairs, and it was necessary to reduce the granting of such leave to an intelligible system. Hospital assistants cannot obtain privilege leave in the accepted sense of the term, and being driven to take leave without pay, have come to think that they can claim it without limit. The emotional language, the calamitous results anticipated from refusal of leave, and the pathetic details of sickness and impending death, which compose the appeal of a native in search of a holiday, are well known; and though rarely believed, they often effect their purpose because they cannot be disproved and because the bare possibility of rejecting a tale of genuine trouble is intimidating. A native doctor's imagination commonly transcends all experience, so that his most harrowing and most circumstantial statements are the most open to suspicion. They are also the most easily tested, and I have to acknowledge much assistance received in 1880 from the officers of the Bengal Police, who have obtained information for me concerning alleged misfortunes. Leave is now granted on private affairs to hospital assistants under the conditions of time which govern privilege leave. Within these conditions statements of reasons are accepted without question. If urgent affairs are pleaded for more than this, enquiry is made through the Police Department into the truth of the plea. Sometimes all urgency vanishes when the applicant learns that enquiry is ordered, and the application is withdrawn. At other times elaborate statements of domestic trouble are proved to contain not even a germ of truth. In a few cases the plea has been verified and leave has been granted. Under the practice of local enquiry, unreasonable applications for leave are becoming less frequent and change of incumbents will be less frequent also in some degree. Changes have also arisen in the process of providing suitably paid posts for promoted officers, which is required under the new organization.

17. Some progress was made in 1880 towards improvement in the composition of the subordinate medical service. The standard of qualification among the class from which hospital assistants are recruited had advanced much at the principal school when my last report was written. The late examinations at Sealdah have shown still further advancement. The standard of English qualification has also been raised. At the same time the service has been relieved of a considerable number of its most useless members. Some have been dismissed for misconduct. Others have resigned; the most frequent cause

being the rejection of immoderate demands for leave. It had become a common practice with young assistant surgeons to apply for leave for long periods shortly after entering the service, the object being to try their fortunes in private practice, and after failure in this to serve the Government. The men were not wanted, and leave was granted; but unreasonable extensions were asked and refusal was followed by resignation. In no single instance has a subordinate of either class left the service whose removal has been otherwise than a gain to it. The unavoidable entries of assistant surgeons continue to exceed the means of employing them; while from every school in the province there come applications for admission of its best pupils into the class of hospital assistants, in number larger than the vacancies, notwithstanding the smallness of the pay which men of this class receive at the outset.

18. The organization of a provincial service of hospital assistants of the several grades, whose career will begin and end in civil employment, will involve increase of expenditure; and as the service exists chiefly for the dispensaries whose emoluments and opportunities furnish the rewards of good work and satisfy the claims of seniority, it is reasonable to look to dispensaries for the means of meeting growing charges incurred on their account. The situation is this. Formerly the province was provided with native doctors from those who had been enrolled for the army, but were not wanted for that service. These were supplemented by a class of men locally entertained, recruited from various sources and containing many persons without regular training of any kind. Examinations and promotions were confined to the military class, and, under its rules, grades and grade pay were determined. A man of this class in charge of a dispensary becoming on promotion entitled to higher pay than he received from the dispensary, might be removed to the army, and the civil Government was saved from increased liability by putting a junior in his place This is now altered. The civil administration must provide for all, seniors and juniors, alike, and must meet claims for increased pay on promotion without any increased field of employment. Thus a hospital assistant holding a dispensary of the lowest status receives Rs. 30 per mensem, whereof Rs. 15 is paid by Government. The dispensary committee covenants to pay no more than Rs. 15. The hospital assistant passes by examination into the first class, and becomes entitled to Rs. 55 per mensem. The committee will not increase their payment if they can avoid it, and the difference would fall on Government, while the dispensary would retain the services of a better man than the rules allow, because there is no other employment for him. Several instances of this kind occurred in the year under review, and the following steps have been taken:—*Firstly*, as opportunities have arisen, promoted men have been transferred to dispensaries to which high salaries have been attached. Such opportunities are limited, and they will not suffice for all future cases. *Secondly*, a dispensary has been compelled to meet the increased charge by dismissing superfluous servants. *Thirdly*, there are dispensaries now in charge of assistant surgeons which do not afford adequate work for them. The supporters have been required either to raise funds for the entire payment of the assistant surgeon if they desire to keep him, or to accept the substitution of a hospital assistant. *Fourthly*, it has been ruled that whenever a dispensary is required or allowed to pass into the independent class, it be notified to the supporters that in the event of their medical officer obtaining promotion, they must be prepared to meet the additional charge, and must not expect that he will be replaced by a junior man.

19. Papers are furnished to this office from districts, called "Quarterly Nominal Disposition Returns of Medical Subordinates," in which there is a column for noting the conduct and qualifications of each person. These papers ought to be useful, but they have been hitherto misleading. The opinions of civil surgeons, as given in these quarterly columns, are often contradicted by those expressed in the annual reports, or on occasions when attention is specially given to the subject of them. Subordinate officers treasure up every written word that can be used to their advantage, and a medical subordinate who is charged with neglect or misconduct does not fail to refer to entries in former returns as evidence in his defence. This causes embarrassment, and a civil surgeon's request for punishment, however well founded it may be, can

often be met only by temporising measures. The terms in which a master describes the general character of a servant, for a general purpose, are determined as much by the master's temperament as by the servant's merits; probably more when the master sees little or nothing of the servant's work. This is the situation of a civil surgeon and a medical subordinate of a distant dispensary. The former can of his own knowledge say nothing. He cannot trust local testimony, and being amiable, he reports a man to be good in positive terms, because he does not know him to be bad. Again, the quarterly return, with its record of opinion, passes into the civil surgeon's office, where every one may see it, and an unfavourable entry disturbs comfortable relations. It leads to enquiry also—that is, to correspondence—which gives trouble. It is not difficult, therefore, to understand entries of unguarded words in quarterly returns. The subject will be brought to the notice of reporting officers. If a civil surgeon knows nothing himself of the character or talents of a subordinate, it is better to say so; or if he gives hearsay evidence, he may state the sources of it. Categorical language, unsupported, misleads my office, and embarrasses the future. Reports of character and conduct must be kept in the hands of civil surgeons, and not filed in their offices. The necessity for a change in this respect is abundantly shown in the events of the year under review.

20. During the past year civil surgeons have on occasions brought to notice great delay in the issue of medical stores after their indents had been passed for supply. Delay has also rendered it impossible to secure the settlement of accounts within the year, as recovery of money due has not been made. The outlay for medicines not appearing in the accounts of the year cannot be given in the financial statement. In my last report I mentioned that a system of valuation and account had been introduced which would secure prompt settlement and enable me to furnish a complete annual statement. On the passing of an indent, a statement of the total value of the stores was sent to the indenting officer, who, with his price list, would distribute the charges among the several dispensaries in his district, and record the sum to be recovered from each. It soon appeared that this was insufficient. The charges for packages, bottles, &c., the occasional issue of second-hand instruments, and the fact that some articles passed for supply were not in store, caused discrepancies between the invoices sent with the supply and the valuation on the indent. The practice was altered, and instead of the indent being valued, a blank form of invoice was sent to the indenting officer, with memoranda of all charges made, the forms being the same as those which would follow from the Store Department. On receipt of his supply, the civil surgeon now copies the entries in invoices, &c., into the blank forms, and returns them signed to this office. There can be no error or discrepancy here, as the papers sent to my office are exact copies of those sent to the Medical Examiner. The failure to secure prompt accounts in 1880 was due solely to delay in indents, but enquiry has shown that the delay arose from civil surgeons not submitting their indents until long after they were due. Indents received after date must await the convenience of the Store Department, where the work of supply is distributed equally through the year. They cannot be allowed to derange the appointed order. Delay after receipt of indent is, therefore, justly due to delay in submitting the indent, and the correction of it lies with indenting officers themselves, to whom the matter has been fully explained.

21. In 1879 the Lieutenant-Governor signified his intention of supplying gratuitously to all dispensaries, whether aided by the State or otherwise, such forms and papers as may be required for recording and reporting their work, and with reference to the great previous cost of some of these papers, was pleased to approve of their preparation by the Jail Press in future, and of the supply being obtained from the Stationery Office instead of the Medical Store Department as heretofore. During the year 1880 therefore a new series of forms was prepared and printed, and before the year closed, the Superintendent of Stationery had provided himself with a sufficient stock to admit of his supplying all requirements of the province. A price list has lately been received. This was a work of some time, and though I am now able to present a complete account of the money spent on these papers for dispensaries in 1880, it was not possible to include the item in the district accounts of the year. How

far the total cost to Government in 1880 was below the actual cost of previous years I am not able to say from the want of accurate accounts, but there is no doubt of the great economy which attends the altered method of supply. The cost of the papers passed to dispensaries on indent in 1880, valued by the price list of the Stationery Office, is Rs. 1,391. The cost under the old system would have been Rs. 4,327, which is itself but a small fraction of previous expenditure. Some new and some altered papers have been taken at the lowest price in both valuations, to avoid over-statement of difference.

22. The Lieutenant-Governor will observe that the foregoing paragraphs contain little more than a narrative of the topics and their treatment which have received attention during the year, and have formed the subject-matter of continuous and voluminous correspondence with your office. From time to time, as investigation proceeded, it became evident that changes were necessary which, as I have already said, would strike the existing system at its root, and until every point of necessary change should be brought forward it was not possible to frame a new code of dispensary rules with any prospect of finality. For the postponement of this work I must hold myself solely responsible, and desire therefore to make the manner of its occurrence clear.

23. In setting forth the evidence which has convinced me that dispensaries in Bengal have not effected the benevolent purpose in which they had their origin, and that the public money granted has been largely diverted to illegitimate use, I have been compelled to advise the closure of some institutions and the transfer of others to the control and responsibility of private persons, as the only remedy for this state of things. I should be glad if it were possible to prevent misdeeds from being done in the name of charity by substituting a better agency for that which has been found wanting. I cannot, however, suggest any measures which are likely to be successful to this end; for it is clear that the Government does not possess, in its lower medical service, instruments worthy to carry out a scheme of genuine charity in unwatched places. While, however, I am forced to point out the manner in which the charitable intentions of Government have been frustrated and its money misused, it would be unwise to overlook the fact that the same course of events has conclusively proved the appreciation of English drugs by the upper classes throughout the province. The few dispensaries which were at first established in central stations were doubtless well conducted under the direct supervision of civil surgeons, and it is due to them that the better-informed residents of the interior conceived the desire for dispensaries in their own neighbourhoods as a means of obtaining English medicine. Multiplication of dispensaries followed, ostensibly for the benefit of the poor. They greatly exceeded in number the means of Government to provide competent doctors; but though in serious illness treatment must have been at best an empty pretence, good English drugs were at hand for the control of ordinary ailments, and established their superiority in the minds of influential people over the crude medication which had gone before. Thus, though charitable relief has been very small, the action of the Government in distributing gratuitous medicine has convinced the richer classes of its value in such manner as to make them willing purchasers of it when they cannot obtain it otherwise. This is sufficiently proved by the events of 1880.

24. If through questionable means and by incompetent hands this material foundation has been laid, it may fairly be expected that the genuine practice of medicine will advance among the people and improve with the better class of practitioners now yearly sent forth from the schools. From several districts is was reported in 1880 that dispensary practice was decreasing under growing numbers of private practitioners who commanded more confidence. This, though it tells a tale which were better untold of the classes which had used the dispensaries, affords good evidence that English medicine now stands on its own merits. It is quite certain that the public at large have gained more than the Government service from improved medical training. It has long been observed that the best pupils of the Calcutta schools preferred the chances of private practice to the fixed salaries of Government, and quite lately the vacancies in the service have been so few as to drive the greater part of the passed candidates into private life.

25. This leads me to believe that, subject to considerations of general policy, which regulate the relations between local government and local charity, the aid which the State has hitherto given towards the diffusion of English medicine in Bengal, by means of dispensaries, may be gradually withdrawn. In a detailed account of existing dispensaries I shall hereafter show that in many instances money grants have simply gone to swell cash balances or invested funds, and in these withdrawal will involve no question of policy. In others, the strong position which English medicine has taken in the province, under the initiative action of Government, has emboldened me to offer advice which might otherwise have been postponed. This position has many points of similarity with other schemes of public advantage, which have been introduced from time to time at the cost and risk of Government, to be made over to private enterprize when success and profit were no longer doubtful. Assuming, then, that the establishment of dispensaries has had a two-fold object—viz. the dispensation of charitable relief and the introduction of English medicine to the people—I submit that the latter has now been fully accomplished, and I leave the former, as a question of general policy, beyond the scope of a departmental report.

26. I proceed to exhibit the working of the dispensaries in 1880 as set forth in the reports and returns of districts—

TABLE NO. 1.

| | |
|---|---|
| Remained open on 31st December 1879 ... ... ... | 255 |
| Established during the year 1880 ... ... ... | ... |
| Total ... | 255 |
| Abolished or closed ... ... ... ... | 9* |
| Remaining on 31st December 1880 ... ... ... | 246 |

| | | |
|---|---|---|
| * Toolsia dispensary. | Kurulgachi dispensary. | Barrackpore dispensary. |
| Gotan " | Nasirgunge " | Arratoon Apcar " |
| Patiraj " | Daodkandy " | Echak " |

The establishment of a new dispensary in the town of Lohardugga was sanctioned in December 1880, but the opening of the dispensary does not fall for record here. The closure of the dispensaries named was ordered under circumstances already indicated. No endemic dispensary existed under that name in 1880.

27. The number of occasions on which committees assembled for the conduct of dispensary business is shown below:—

| | | | |
|---|---|---|---|
| Monthly or oftener ... ... | 39 | Four times ... ... | 17 |
| Eleven times ... ... | 4 | Three " ... ... | 25 |
| Ten " ... ... | 9 | Two " ... ... | 20 |
| Nine " ... ... | 5 | Once ... ... | 9 |
| Eight " ... ... | 12 | Occasionally ... ... | 4 |
| Seven " ... ... | 8 | None held, or no record of them ... | 24 |
| Six " ... ... | 9 | No committees ... ... | 34 |
| Five " ... ... | 17 | Under municipalities ... ... | 15 |

28. There is some evidence of increasing interest here. Closure and transfer to municipalities have reduced the number of committees. Their work, however, is still far short of the conditions of their appointment and the requirements of the dispensaries. Complaints of indifference, made by district officers, are common. The number of institutions whose committees met more than six times in the year was only 77. Regular meetings were held at 39 places.

TABLE No. 2.

*Showing the work of Dispensaries grouped in the order of numbers treated.*

| | In-door. | | | | | | | | | | Out-door. | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Under 25. | 25 to 50. | 50 to 75. | 75 to 100. | 100 to 250. | 250 to 500. | 500 to 750. | 750 to 1,000. | Upwards of 1,000. | Total. | Under 250. | 250 to 500. | 500 to 750. | 750 to 1,000. | 1,000 to 2,500. | 2,500 to 5,000. | 5,000 to 7,500. | 7,500 to 10,000. | Upwards of 10,000. | Total. |
| 1880 ... | 30 | 20 | 18 | 12 | 48 | 23 | 5 | ... | 2 | 158 | ... | 1 | 9 | 12 | 95 | 84 | 25 | 13 | 12 | 251 |
| Percentage ... | 18·98 | 12·66 | 11·4 | 7·6 | 30·38 | 14·55 | 3·16 | ... | 1·26 | ... | ... | ·4 | 3·58 | 4·78 | 37·85 | 33·46 | 9·96 | 5·18 | 4·78 | ... |
| 1879 ... | 25 | 20 | 18 | 13 | 46 | 26 | 5 | 1 | 1 | 155 | ... | 4 | 8 | 16 | 89 | 89 | 19 | 16 | 9 | 250 |
| Percentage ... | 16·13 | 12·19 | 11·61 | 8·38 | 29·68 | 16·77 | 3·22 | ·65 | ·65 | ... | ... | 1·6 | 3·2 | 6·4 | 35·6 | 35·6 | 7·6 | 6·4 | 3·6 | ... |

29. The chief indication of this table is the insignificance of the house-practice of dispensaries. There are in fact very few institutions in which house patients numerically represent any public benefit. In some small dispensaries the reception of this class of patient has been stopped. An in-patient ward affords opportunities to subordinates, which are better avoided where it can show no beneficial work. It is not, however, possible to close them in every small dispensary, as it is necessary in some places to receive wounded persons sent by the police. On pilgrim routes also a place of reception is said to be required, but very commonly a dispensary is used only as a refuge for helpless paupers.

TABLE No. 3.

*Showing grade of Officers in charge of Dispensaries.*

| | | 1879. | | 1880. |
|---|---|---|---|---|
| House Surgeon, Dacca ... ... ...... | | 1 | | 1 |
| Assistant surgeons, 1st grade ... ... | 6 | | 6 | |
| Ditto, 2nd „ ... ... | 13 | | 12 | |
| Ditto, 3rd „ ... ... | 46 | | 47 | |
| | | 65 | | 65 |
| Medical graduate of the East Indian Railway Service | | 1 | | 1 |
| Civil hospital assistants .. ... ... | | 184 | | 183 |
| Total ... | | 251 | | 250 |

TABLE No. 4.

*Inspection by Civil Surgeons.*

| | Daily or frequently. | More than four times. | Four times. | Three times. | Twice. | Once. | Not inspected. | No information received. | Total. |
|---|---|---|---|---|---|---|---|---|---|
| Inspected by civil surgeon, 1880 ... | 51 | 10 | 11 | 26 | 67 | 59 | 24 | 3 | 251 |
| Ditto ditto, 1879 ... | 50 | 14 | 13 | 46 | 57 | 58 | 11 | 1 | 250 |

30. This table does not show any material increase in the total number of civil surgeons' inspections. The dispensaries over which daily supervision is exercised have not diminished in number. In the extracts from district reports the reasons will appear which have been given in explanation of reduced visits. Much information has been obtained from inspection reports during the year, which has been utilized for the correction of abuses; but the inconvenience of a civil surgeon's quitting his station to inspect a dispensary which has little or no public value, is an important reason for reducing the number of such institutions to the utmost. The smallest of the station duties is of greater public moment than the affairs of the entire number of outlying dispensaries in some districts, and the whole of the station duties are left to a native subordinate when the civil surgeon makes a tour of inspection. For this reason I have not encouraged the visiting of small dispensaries more than twice in a year, when application has been made for additional travelling allowance with this object.

TABLE No. 5.

*Numbers of Patients treated in* 1880 *and seven previous years, and ratio per cent. of Mortality among In-patients.*

| | In-patients treated. | Out-patients treated. | Total. | Mortality among in-patients per cent. |
|---|---|---|---|---|
| 1873 ... ... ... ... ... ... ... ... | 21,143 | 622,724 | 643,867 | 16·31 |
| 1874 ... ... ... ... ... ... ... ... | 24,683 | 660,847 | 685,530 | 16·92 |
| 1875 ... ... ... ... ... ... ... ... | 22,753 | 724,144 | 746,897 | 17·1 |
| 1876 ... ... ... ... ... ... ... ... | 23,757 | 829,804 | 853,561 | 16·96 |
| 1877 ... ... ... ... ... ... ... ... | 23,954 | 875,631 | 899,585 | 17·34 |
| 1878 ... ... ... ... ... ... ... ... | 28,473 | 927,783 | 956,256 | 20·01 |
| 1879 ... ... ... ... ... ... ... ... | 24,847 | 865,995 | 890,842 | 17·78 |
| 1880 ... ... ... ... ... ... ... ... | 23,567 | 888,095 | 911,662 | 15·17 |

31. This table is produced for the sake of uniformity with previous reports. It includes the numbers returned from dispensaries whose figures are quite trustworthy in one category with the majority whose figures merely represent so much work as a native doctor may think will be expected of him. I shall endeavour to point the distinctions in notes on particular dispensaries. The Government fully recognizes the fact that up to the present time nothing is known of the total number of persons in Bengal who have received medical treatment in its dispensaries. I have said that under close attention from all concerned there may, at some future time, be an approximation to the truth. Towards this the detection and proof of falsification is an important step, and a commencement has been made.

32. Some information will be given hereafter concerning the public health of the several districts and its relation to the practice of the better dispensaries. It would serve no useful purpose to compare the mortality of the province at large with the baseless totals of this table, even if the numbers were sufficiently large to show any relation to the public health.

TABLE No. 6.

*Total medical aid afforded by Government in Bengal.*

| | 1879. | | 1880. | |
|---|---|---|---|---|
| | Number. | Patients treated. | Number. | Patients treated. |
| Calcutta hospitals and dispensaries ... ... ... | 6 | 265,018 | 6 | 273,025 |

| | Bhagulpore ... ... ... ... | 4,268 | 1,826,290 | 9 | 8 | ·92 | ·95 |
| | Purnea ... ... ... ... | 4,957 | 1,714,795 | 3 | 3 | ·29 | ·3 |
| | Maldah ... ... ... ... | 1,813 | 676,426 | 3 | 3 | 1·69 | 1·63 |
| | Sonthal Pergunnahs ... ... ... | 5,488 | 1,259,287 | 5 | 6 | ·58 | ·69 |
| | Total and average ... | 20,448 | 7,289,784 | 24 | 24 | ·87 | ·92 |
| Chota Nagpore ... ... | Hazaribagh ... ... ... ... | 7,021 | 771,875 | 4 | 3 | 1·17 | ·89 |
| | Loharduggа ... ... ... ... | 12,044 | 1,237,123 | 2 | 2 | ·26 | ·29 |
| | Singhbhoom ... ... ... ... | 3,897 | 318,180 | 1 | 1 | ·42 | ·4 |
| | Maubhoom ... ... ... ... | 4,921 | 995,570 | 2 | 3 | ·43 | ·46 |
| | Total and average ... | 27,833 | 3,322,748 | 9 | 9 | ·57 | ·51 |

33. To these figures the same general objection applies, and establishes their worthlessness. Variations in proportional numbers represent only the varying ideas of native doctors as to what it is desirable to set forth.

## TABLE No. 8.

*Showing proportion of Male and Female Adults and of Children treated in* 1880.

| SEX. | 1878. | 1879. | 1880. |

| | Purulia | 13·76 |

34. The general death-rate in Bengal dispensaries is given in the 5th table as 15 per cent. for 1880. It does not seem very high when all things are considered. There are some rates in the above table which are excessive, as there have been in all years, but there are very few figures in the list which have not been equalled by the hospitals at Howrah and Sealdah, when they have been forced to receive large numbers of desperate cases. Dispensaries which receive these cases in large proportion show high death-rates. The proportion varies in different places and in the same place in different years. That the general rate is not high is due to the counterbalancing influence of the many dispensaries which make a record of in-patients by feeding and sheltering aged, leprous, and rheumatic persons, who are left by their friends, or themselves take refuge there. Information on particular death-rates will be given under the several dispensaries.

35. I omit from this report the table given in former years, purporting to show the proportion which the principal diseases have borne to the total quantity of sickness returned. I pointed out last year that the table was useless, and would be useless also if its figures were true. Of the previous tables it may be said that hereafter, if any approach to a true record should be made, they may serve to show the magnitude of the error which had to be corrected; but for the table which I now omit, even this inglorious future cannot be predicted, because, though dispensary records should come into relation with the public sickness of the day, proportions of disease, as named by most of the native doctors of 1880, will never be accepted even as types of error:—

TABLE No. 11.

*Sale of Cinchona Febrifuge in* 1880-81.

| YEARS. | CINCHONA ALKALOID. | | | | | |
|---|---|---|---|---|---|---|
| | Quantity sold. | | | Value. | | |
| | lb. | oz. | dr. | Rs. | A. | P. |
| Half-year ending 30th September 1880 | 57 | 4 | 4 | 1,003 | 5 | 3 |
| Half-year ending 31st March 1881 | 106 | 5 | 6 | 1,882 | 3 | 0 |
| Total | 163 | 9 | 10 | 2,885 | 8 | 3 |
| For financial year 1879-80 | 103 | 9 | 12 | 1,885 | 15 | 0 |

36. It is interesting to notice the progressive appreciation of the new febrifuge by the people of Bengal. The past year, so far as I yet know, has produced less fever than 1879; nevertheless the increase of sale has been as large as that reported in the previous year.

37. During the year 1880 civil surgeons were prepared to carry out, to the best of their ability, the orders of Government, by testing the efficacy of dilute sulphuric acid as a prophylactic against cholera, and it was ordered that results should be stated in my reports on the hospitals of Calcutta and the dispensaries of the province. In my report on the medical institutions of Calcutta, I said that opportunity for such experiment did not arise in a hospital, inasmuch as patients admitted for the disease were beyond the reach of prevention; that cases rarely originated in hospital, and that the chance of such origination could not be met by preparing, with sulphuric acid, the bodies of inmates who were under treatment for other disorders. District surgeons labour under similar disabilities. They are called upon to treat cholera in its development, not to anticipate its appearance. There may, of course, be cases of sudden outbreak in a village or town district which would, if confined within limits sufficiently definite, afford an opportunity for experiment; but nowhere could the civil surgeon exercise such command over the people as to induce any but those already sick to take a medicine of which they did not know the name. It appears to me that the only communities among whom this experiment is possible are prisoners in jail, whose whole lives are under command. It is only in epidemic outbreaks, however, that any inference could be suggested from the events, and such outbreaks are now very uncommon in the jails of Bengal.

38. Moreover, the nature of the case forbids all expectation of results within any definite period. For such enquiry there must be given a community over which the experimenter has absolute command, and which has been visited by outbreaks of cholera recurring seasonally for some years past. On the first appearance of the disease, all who are exposed to it must receive sulphuric acid. If, after a sufficient number of years, it should appear that cholera had shown itself, but had not spread, there would be materials for induction. Nothing short of this would be worthy of notice, and I do not think Bengal can supply the conditions which such an experiment demands. Reports on the subject have been received from several officers during the past year. They are, almost without exception, to the effect that no opportunity has presented itself for the trial of sulphuric acid as a prophylactic against cholera.

49. The tables in the appendix give details of operative surgery in dispensaries as usual. I fear they are, as to numbers, quite valueless. In my last report I mentioned that the civil surgeon, 24-Pergunnahs, who had dealt very carefully with the dispensaries of his district in 1879, discredited altogether the returns of surgery. In this report I have told the story of a native doctor who, in an unguarded moment, admitted that he had not operated at all in a certain period, and was found to have recorded 14 operations. Last year I showed how little acts of assistance, which one schoolboy would render to another on a play-ground, were magnified into surgical operations when done by a dispensary doctor. I gave it as my belief that in consequence of the *exclusive* notice which operations had received in the reports of this department and the resolutions of Government, native subordinates had been led to feel that the road to preferment was to be opened by the knife alone, and that the interests of the people had suffered in consequence by the neglect of medicine. I said that good surgeons had always been much more numerous than good physicians among Indian pupils. It was my intention to show that medicine needed to be rescued from neglect, and that due proportion should be observed between the two branches, but that a contrary effect had been hitherto produced by confining the notice of authority to operative surgery. It is quite true that a detailed account of medical practice could not be presented, and would be altogether out of place in an administrative report; but I venture to think that a technical discussion of surgical practice is equally out of place. It is evident from the terms of the resolution that the remarks in my last report did not convey my real meaning to the Government.

40. Notwithstanding all that I have said, I should, in deference to authority, draw a comparison between the mortality from selected operations in the interior and in Calcutta, on the figures of the table, if I could think that I should be comparing similar things. Facts, however, have been brought to my notice which deter me from making any such use of the figures. In one dispensary which has enjoyed a reputation for operative surgery, a patient attacked with tetanus after operation has been entered as discharged, and re-admitted as a sufferer from tetanus. I cannot present the figures of Calcutta hospitals, prepared as they are now with scrupulous regard to every influence affecting results, side by side with records which are liable to such treatment as this.

41. In his resolution on the report for 1877 the Lieutenant-Governor drew attention to the neglect of practical surgery by civil surgeons. The subject was taken up by the Surgeon-General in his report for 1878, who compared the number of operations performed in the dispensaries of the North-Western Provinces with those in Bengal, and drew a conclusion unfavourable to the surgical activity of civil surgeons in Bengal, noticing the small numbers of operations performed by themselves. It is probable that in some places the doctrine remains in force, which, when I was a civil surgeon, was very pointedly inculcated in the orders of Government—viz., that a civil surgeon should refrain from operating with his own hand in order that the assistant surgeon might acquire practice. I have ascertained from one senior civil surgeon in Bengal that he has been influenced by the same understanding. I do not advocate the retention or revival of the doctrine, for a young English surgeon needs the opportunity which a dispensary affords of operative practice, quite as much as his subordinate does; but I think its former promulgation should be mentioned in connection with the charge of indifference which civil surgeons have incurred in Bengal.

42. Again, it is commonly believed that there is a large difference in the prevalence of certain conditions requiring surgical interference between the North-Western Provinces and Bengal, which is ascribed to differences of soil, climate, diet, &c. Calculous diseases are almost confined to limited tracts in Bengal; and operations on the eye are said to be much less frequently required. Civil surgeons who have served in both provinces have observed the much greater readiness with which North-Western natives submit to operation than Bengalees. It is reasonable therefore to expect that there should be less operative surgery in the Lower Provinces. There has been less; and of genuine surgery the difference has been quite as large as that indicated by Dr. Irving.

43. There was nevertheless an important error in the figured comparison that was made to show this difference. The annual returns of the North-Western Provinces and Oudh include all the medical institutions of the provinces, city hospitals and rural dispensaries alike. These were compared with the figures of Bengal dispensaries in the interior alone. The six large Calcutta hospitals, and the large Suburban dispensaries were omitted. Not only do these hospitals themselves show large numbers of operations, but they attract diseased people from the interior, and so diminish dispensary practice. The Lieutenant-Governor will find in the following statements a true comparison of the alleged operations:—

*Comparative Statement of Operative Surgery in the Upper and Lower Provinces.*

| Years. | North-Western Provinces and Oudh. | | | Bengal. | | | | |
|---|---|---|---|---|---|---|---|---|
| | Number of operations. | Total sick treated. | Percentage of operations to total sick treated. | Number of operations. | | | Total sick treated. | Percentage of operations to total sick treated. |
| | | | | Calcutta Medical Institutions. | Dispensaries. | Total. | | |
| 1877 ... ... ... | 76,596 | 1,067,041 | 7·17 | 22,740* | 40,209 | 62,949 | 1,158,816 | 5·43 |
| 1878 ... ... ... | 82,408 | 1,152,228 | 7·15 | 22,180 | 48,970 | 71,150 | 1,242,738 | 5·72 |
| 1879 ... ... ... | 67,131 | 1,433,393 | 4·68 | 21,130 | 49.365 | 70,495 | 1,155,860 | 6·09 |

* Approximately correct.

44. These figures show a much smaller difference in totals between the provinces than that formerly presented, and show also that while the totals and proportional numbers returned have fallen in the upper, they have increased in

the lower province, until the latter has come to exceed the former. The proportion of paper surgery may have been much the same in the two series; but bearing in mind the farcical character of many of the Bengal returns, I believe that the increase they show is fictitious. In the new inspection report the civil surgeon notes the number of operations on record. A native doctor seeing this done, regards it as indicating an official demand for operations, which he thenceforward proceeds to supply in his returns from his imagination. I have separated therefore the major operations from the minor, and I find the figures show much fewer operations in Bengal, with no corresponding tendency to increase. They are also for many reasons more likely to approach the truth, and I subjoin them accordingly:—

MAJOR OPERATIONS.

| | North-Western Provinces and Oudh. | Bengal. |
|---|---|---|
| 1877 ... ... ... | 4,711 | 3,217 |
| 1878 ... ... ... | 6,857 | 3,623 |
| 1879 ... ... ... | 6,348 | 3,677 |

The difference, both absolutely and proportionally to the total numbers of sick, is large, and accords with what has been believed of the circumstances of the two provinces.

45. To try the question further, I have examined the returns of dispensaries at sudder stations which, being for the most part closely supervised by civil surgeons, afford less scope for a native doctor's imagination. The figures are as follows:—

OPERATIONS AT SUDDER STATIONS.

| | |
|---|---|
| 1877 ... ... ... ... | 19,320 |
| 1878 ... ... ... ... | 20,343 |
| 1879 ... ... ... ... | 22,078 |
| 1880 ... ... ... ... | 21,172 |

These figures represent the operative surgery of the 48 largest dispensaries in Bengal, and show that these central institutions, where fully half the entire number of major operations have occurred, have contributed but a small fraction of the great total increase alleged to have taken place since 1877, which increase therefore has existed mainly in the fabricated returns of minor operations from small outlying dispensaries. The figures show also a downward tendency under the closer supervision of 1880.

46. At Bankoora the Magistrate commenced to test all dispensary figures in 1879. The effect on paper operations, in the outlying dispensaries of his district, is seen in the following significant numbers:—

OPERATIONS.

| | |
|---|---|
| 1877 ... ... ... ... | 690 |
| 1878 ... ... ... ... | 720 |
| 1879 ... ... ... ... | 706 |
| 1880 ... ... ... ... | 493 |

There can be no doubt as to which of these figures is nearest the truth.

47. The following notes on particular dispensaries are taken from the reports of civil surgeons and the comments of Magistrates and Commissioners. In some cases a few remarks are added. There is a want of uniformity in the points noted and in the arrangement of them, which makes reference and comparison less easy than they might be. The returns are submitted in an established form, but the summary reports of civil surgeons vary greatly in form and contents. Some are complete in all respects; in others important matters are left unnoticed, and irrelevant discussions introduced. A scheme of annual report has lately been drawn up for adoption everywhere, so that all that is necessary for a general review may be given and easily found. Medical officers will be left to append in subsequent paragraphs any remarks they may be disposed to offer on topics not included in the scheme. From some dispensaries which were closed during the year information has been given concerning their previous working; from others no returns have been furnished.

In these notes the total sums said to have been expended in some dispensaries in 1880, do not include the cost of medicines supplied from the public store. Indents were so greatly delayed that recovery of money due on them was not made within the year. The item therefore does not appear in the accounts. I propose to add to the financial table a column showing all such sums as were due on this account in 1880.

# EXTRACTS FROM REPORTS OF CIVIL SURGEONS, &c.

## BURDWAN DIVISION.

**Burdwan district.**

The district is reported to have been very unhealthy, fever prevailing largely.

To the *Burdwan* dispensary two new wards have been added—one for contagious diseases and one for surgical cases. In-patients were less by 108, and out-patients more by 2,130, than in 1879. Fever caused the difference. The average daily number of sick was 102 against 90 in 1879. Fever was fatal to 17 persons in 129 treated, or 13·1 per cent. Diarrhœa and dysentery caused 79 deaths in 163 cases, or 48·4 per cent. These were doubtless cases of the class that swell the mortality of the Howrah and Sealdah hospitals. Surgical practice does not diminish at Burdwan, 80 major and 1,365 minor operations being reported in 1880. Nothing is said of the committee. The dispensary is well managed and useful, but it has been needlessly expensive. Its affairs have had the consideration of Government and orders for reform have been received.

*Cutwa.*—Fever and bowel complaints were prevalent. The number of patients treated was 3,422 against 3,189 in 1879. There was reduction of in-door patients from 130 to 116, and increase of the others from 3,059 to 3,306. The daily averages were 3·7 in-patients and 22 out-patients, about the same as in 1879. The patients attended, therefore, on an average between two and three times. This dispensary does not appear to be useful to the poor; yet it cost the Government Rs. 1,255 in 1880. It has been classified lately. The committee hold monthly meetings.

*Mancoor.*—No in-patients: out-patients rose from 3,331 in 1879, to 4,312 in 1880. Fever and its consequences were conspicuous. The average daily number of sick is said to have been 41 against 27·7 in 1879. The committee met six times.

*Raneegunge.*—Here attendance fell off from 1879 by 228. There was a death-rate of 41 per cent. of in-patients, pilgrims and travellers largely composing them. The average daily number of sick was 28, the same as in 1879. There were some cases of cholera. The surgical operations were nearly the same in number as in 1879. The committee met six times in 1880. Reform of the dispensary has been ordered.

*Chuckdighee.*—The total number here exceeded that of 1879 by 857. There were 125 in-patients against 98. Fever largely increased. The average daily number of sick was 38·5, which, with a total number of 5,172, as it includes in-patients, does not indicate much important treatment of out-patients. The dispensary is supported by the zemindar, but there is a nominal committee. Reform of the dispensary has been ordered.

*Mahata.*—No in-door patients. An increase of fever is recorded and some minor operations. The financial management of the dispensary is unsatisfactory, and its affairs are under discussion. The attendance has been small. All the dispensaries in the Burdwan district were visited by the Magistrate in 1880, and the civil surgeon's visits were more numerous than in 1879.

**Hooghly district.**

The report is very meagre. The *Emambarah* hospital is daily visited by the civil surgeon, who continues to speak well of its working. The total number fell from 10,261 in 1879, to 9,716, but the daily average increased from 54·9 to 58 out-patients, and from 20·5 to 23 in-patients. There were 30 major and 384 minor operations during the year.

*Jehanabad.*—Attendance fell from 3,286 in 1879 to 3,050. In-patients were nominal, a daily average of one; out-patients averaged 16 daily. The illnesses must have been very slight, or the patients must have ceased to attend uncured. The Magistrate thinks that the figures of this and other dispensaries show fever to be declining, and thinks favourably of the financial position of the dispensary.

*Sultangachee.*—Here increase of total number is recorded from 2,131 to 3,110, with 4 in-patients and 13 out-patients daily, against 3 and 9 in the previous year. It is a poor pretence of work, for the really sick saw very little of the dispensary, and the civil surgeon may well say, as he does, "that the dispensary does not seem to be much valued in the neighbourhood."

*Boinchee.*—No in-patient. Out-patients fell from 3,066 to 2,829, with daily attendance of 22·7. The civil surgeon reports that the hospital assistant is popular. His dispensary does not appear to be so.

*Dhuniakhally.*—Numbers were nearly the same as in 1879—viz. 3,825 against 3,949 out-patients. Daily attendance shows 28 against 35. The civil surgeon makes no remark.

*Dwarbasinee.*—Increase of out-patients from 2,462 to 3,530. This institution would seem to progress in usefulness if any inference of real sickness among the patients could be drawn. The daily average was 27 only, giving very few visits to each person if the totals be true. Complaints against the hospital assistant were made during the year.

The dispensaries in the Hooghly district were all visited twice by the civil surgeon, with the exception of Jehanabad, which received one visit.

Midnapore district.

The Midnapore district was deprived during a portion of the year of the services of a civil surgeon. The Magistrate mentions that the public health was not so good as in 1879, but that mortality from fever was smaller in all but the Ghatal sub-division, and the assistant surgeon in charge, who signs the dispensary reports, shows that the district was less healthy. The report is full and clear.

*Midnapore.*—A large establishment, with separate accommodation for pilgrims. Attendance of both in-door and out-door patients fell off in 1880, taking an opposite course to the health of the district. The health of the town is said to have improved, and care was taken in 1880 to prevent needless admission to hospital. An abundant harvest and the miserable condition of the peasantry are stated as concurrent causes of less resort to the hospital by people from a distance. The dispensary is largely used by pilgrims and wanderers. The municipality has taken charge of it. A Government contribution of Rs 37, for which no authority could be traced, has been stopped. A house for the resident surgeon is projected. The total number treated was 10,789, whereof 494 were house-patients. The daily average number was 120·6, composed of 95·9 out and 24·7 in-patients.

*Ratgorah* dispensary is under the Court of Wards, supported from the Mysadal estate. The committee showed much interest in its affairs in 1880. Its patients averaged 2·9 in-door and 32 out-door, against 2·5 and 37·7 in 1879. A new building has been sanctioned.

*Contai.*—The assistant surgeon will be shortly replaced here by a civil hospital assistant. The attendance has been very small; house-patients nominal, a total of 30 in 1880; and 4,248 out-patients, giving an average of 11·6 daily. The figures cannot be correct, for if every alleged patient had attended once only, this average would be exceeded. It is reported that the residents say the dispensary is useless.

*Ghatal* dispensary is under the municipality. Attendance increased from 85 house-patients to 100, and from 3,747 out-patients to 4,487. Malarious fever was prevalent. The averages were 4·4 in and 36·5 out-patients. The committee was active; and the people are reported to appreciate the institution.

*Tumlook.*—The municipality declined to take charge of this dispensary, but the Magistrate has again raised the question. Want of funds caused temporary closure of the in-patient ward. The committee met eight times, and the Commissioner visited the place, and recommended dismissal of the compounder. Attendance fell off in 1880. There were 36 in-patients against 57 in 1879, and 4,204 out-patients against 4,861; the average of 1880 being 2·5 in and 39 out-patients. There is said to have been a good deal of operative surgery at Tumlook; but as 11 cases of fracture are said to have been treated by "refracture," the returns do not command much confidence.

*Chundrakona.*—No house-patients. Out-patients increased in 1880 to 4,448 from 3,623 in 1879. The committee was active, meeting monthly. The daily average number of patients was 48.

*Golegram.*—Attendance decreased, showing 3,207 patients against 3,553 in 1879. The average was 24·6.

*Narajole.*—Number of patients fell from 3,258 in 1879, to 3,076, with a daily average 31·9.

*Kherpai.*—Managed by the municipality. Attendance fell to 3,167 from 3,671 in 1879, with 31·8 for daily average.

*Dantoon.*—This dispensary was in financial difficulty, but was relieved by the local zemindar. A new house has been bought. The number of patients seems to decrease steadily. In 1878 it was 4,702, in 1879 it was 4,112, and 3,403 in 1880, with a daily average of 21. The dispensary is said to be in the heart of a malarious tract, and the only one on the pilgrim route from Midnapore to Juggernath. Nevertheless it is very little used.

*Gurbetta.*—Subscriptions are unpaid and funds very low. It is said that the dispensary has existed mainly on the payments of Messrs Watson & Co. The Magistrate has made strenuous efforts for improvement, but has met with much discouragement, and the Commissioner has threatened withdrawal of Government aid. There was great increase of work returned in 1880. In-patients increased from 42 to 52, and out-patients are returned as 6,784 against 1,104; the daily average, however, was only 39·6.

Beerbhoom district.

Very little is said in the report concerning the public health of the district, and that little is inferred from the dispensary figures. It is reported that notwithstanding a widespread outbreak of fever in October and November, the year on the whole was healthy, since the number of patients who attended the dispensaries was less by 649 than in 1879. The report is sufficiently full, but the arrangement of its matter is confused, and creates difficulty in tracing separately the condition of the institutions. Mortality is ascribed to the admission of destitute people left by their friends to die, with the object of getting rid of them.

*Soory.*—Here 9,051 patients were returned in-door and out-door, with a daily average of 90. This represents fair work. The civil surgeon says that the dispensary can afford "only shelter to the needy and a mouthful to feed upon, with scanty bedding, which however is valuable to a forlorn pilgrim." The total number received indoors was 73, of which 43 were surgical cases; 13·6 per cent. died.

*Rampore Hât.*—The total number was 3,642, with 98 in-patients and 12 per cent. of deaths. Here railway servants are treated, and the proportion of moribund paupers is comparatively small. The entire daily average was 23·7 only, indicating very few visits from

each out-patient. Want of adequate means for food, &c., are mentioned. I observe, however, that each diet cost more at Rampore Hât than at the Howrah General Hospital, and more, I think, than an average of the province.

*Hetampore.*—No in-patients: out-patients numbered 4,630 in total, with a daily average of 56. The figures are comparatively favourable as to the attendance of patients. The dispensary enjoys a regular income from the Rajah and prospers financially. It is economically conducted, and apparently useful in the hands of an hospital assistant who is said to be attentive to his work, but of "average standard" professionally.

*Rypore* returns 835 patients only, with a daily average of 26·7. If this average be based on actual attendances it will represent a good proportion of real illness among the patients. The total number, however, is too small to prove usefulness. The civil surgeon and the Magistrate think the dispensary must soon cease to exist, as subscriptions diminish and there is no cash balance left. A compounder is reported to be maintained at Rs. 10 per mensem, for whom there is no work.

**Bancoorah district.**

The report from this district is full, clear, and satisfactory. It is covered by a letter from the Magistrate with most useful criticism of work and figures, showing, though Mr. Anderson does not say this, the great assistance which dispensary management derives from a Magistrate's attention, and the encouragement it affords to medical officers and subordinates. There is evidence, independently of dispensary figures, that the health of the district was good in 1880. Sanitary matters received much notice. The Magistrate bears cordial testimony to diligent attention given by the civil surgeon to the affairs of his dispensaries.

*Bancoorah.*—This dispensary received from the Maharajah of Burdwan Rs. 1,800 during the year. The number of in-door patients was less than in 1879. Greater care was taken in selection of cases. Nearly half the cases were Juggernath pilgrims, showing that in this place change of route has not, as I had been led to suppose, reduced the attendance of pilgrims. They supplied the most fatal disorders, and mortality rose from 11·6 per cent. of the total in 1879 to 16·8 in 1880. The in-door dispensary was daily visited by the civil surgeon and seems to have been largely worked by him. The Magistrate paid several visits. The entire number of patients was 5,734 against 5,701 in 1879. There were 261 in-patients, with a daily average which fell from 13 in 1879 to 10 in 1880, in consequence of the rejection of unfit cases, and gratuitous treatment in their houses of poor persons having sickness which tends to spread. The out-door practice was nearly the same as in 1879, viz. 46 daily against 48·6. There were 51 major and 1,118 minor operations, without any instance of fatal result. The establishment is well spoken of, and the Magistrate bears gratifying testimony to the working of the dispensary. It was visited by the Commissioner.

*Bishenpore.*—The committee are said to take little interest in the dispensary, which will be made over to the municipality shortly. I observe that the committee met seven times in the year, but the standard at Bancoorah is high. The civil surgeon paid five visits in 1880. The Commissioner also paid one and the Magistrate several visits. Attendance of patients at Bishenpore fell off in 1880. The civil surgeon says the year was healthier and the hospital assistant is unpopular. He intimates that the cessation of false entries may have had some effect, but he notices also that the patients seen by himself at his visits in 1880 were much less than 1879, and the Magistrate is quite satisfied, with good reason to be so, that this cause of difference has not existed. The total number of patients in 1880 was 3,458 against 1,712, and the daily average was 31·7 against 49. The civil surgeon expresses some disappointment in the hospital assistant, but the Magistrate thinks well of him, and has heard no complaints, though he is evidently fully informed from the neighbourhood concerning dispensary affairs. An in-door establishment has been proposed.

*Maliara.*—Thorough repair and much improvement of dispensary buildings have been effected here, to which Baboo Brojendro Pal Chowdry has contributed liberally. The committee are apathetic. The dispensary was inspected three times by the civil surgeon and once by the Magistrate. The total number treated was 2,071 against 2,593 in 1879. The daily average was 16 against 27. This the Magistrate thinks may be partly due to the knowledge that the figures would be tested. Much less operative surgery was reported, probably under the same consciousness. A compounder was maintained for whom there was no legitimate work, as well as a water-carrier. The civil surgeon proposed reduction, but the committee resisted. The returns were under scrutiny by the Magistrate when the report was submitted, census operations causing delay.

*Ajoodhya.*—Here also the committee are said to "lack interest," but they met seven times. The diseases treated were mostly trivial, and the figures were under scrutiny by the Magistrate. The civil surgeon paid two and the Magistrate one visit. There were 2,186 patients returned against 3,106 in 1879. The hospital assistant is said to be unpopular and inefficient. A compounder was maintained here.

**Serampore sub-division.**

The health of this neighbourhood is said to have been good. Three of the dispensaries in this sub-division originated in times of epidemic sickness. Four of them were transferred to municipalities in 1880. The Sub-divisional Officer points out that no necessity now exists for some of the institutions, and the Commissioner thinks they might be closed without much loss. The Sub-divisional Officer furnishes an useful memorandum.

*Serampore.*—There was small increase of out-patients and decrease of house-patients in 1880. Diminished prevalence of fever is given as the cause of this. House-patients numbered 417 against 442 in 1879, and there were 125 deaths against 139. The fatal cases being those of pilgrims and starved people brought by the police. There were 16 major operations, with three deaths.

*Connagore.*—Here attendance of patients fell from 2,431 in 1879 to 1,701 in 1880. The dispensary was inspected several times by the civil surgeon. The hospital assistant was not well regarded. Funds were scarce and the closure of the dispensary seemed imminent. It has since been ordered.

*Rishra.*—Attendance has fallen off greatly. Patients numbered only 2,617 in 1880 against 3,780 in 1879. The dispensary was closed for about a month, as the hospital assistant was sent to jail, and the compounder absconded. The committee met once, but the secretary alone seems to take any interest in the dispensary. Subscriptions are much in arrears. The civil surgeon paid frequent visits.

*Boidyabutty.*—Number of patients fell off, 3,505 against 3,859. The municipality has taken charge of the dispensary. The hospital assistant is said to be attentive and popular. The dispensary is situated in a populous locality. It was visited several times in 1880.

*Bundipore.*—Attendance less than in 1879, the total numbers being 1,825 against 2.128, and the daily average 20·8 against 25·8. Here the health of the neighbourhood is said to have been worse than in 1879. The local committee has been fairly active, and the civil surgeon inspected the dispensary twice.

**Howrah district.**

*Ooterpara.*—This is the only dispensary in the district. Returns have been furnished, and the civil surgeon has not thought it necessary to prepare a separate report. The dispensary is, on its present scale, out of all proportion to the requirements of the place, as shown by the work done. There were 283 in-patients, with an average of 11 in 1880; and 3,715 out-patients, with an average of 31, against 305 and 3,516 in 1879. For this small work an assistant surgeon is maintained, with an establishment which would suffice for the largest mofussil dispensary in Bengal. The subject is under the consideration of Government.

## PRESIDENCY DIVISOIN.

**District of 24-Pergunnahs.**

The civil surgeon has furnished a report on the dispensaries of this district, which, though very late, is very complete. He observes that the public health of the district was good in 1880. Several of the dispensaries were not inspected during the year. There was a change of civil surgeons more than once, and Dr. Jackson found that his ignorance of the district, and of the best method of moving from place to place, prevented him from visiting the less accessible places. He notices the worthlessness of returns from outlying dispensaries, and the absurd statements concerning surgical operations which are made in them. He finds also that in answer to orders for the employment of native drugs, they figure largely in the dispensary returns, but are not to be found in store in the places themselves, nor are there any charges for them in the books. Much Government money is paid to dispensaries in the district which is no longer required, as will appear in the following extracts:—

*Alipore.*—This dispensary was placed under the municipality at the end of the year. The committee met five times in 1880. The civil surgeon visited almost daily. There were 238 house and 4,740 out-patients, against 177 and 5,316 in 1879, the daily numbers being 9 and 36, against 5 and 41. The death-rate was 14 per cent. The public health of the vicinity is said to have been good. Progress is strongly marked in this dispensary. There were 17 major operations with two deaths. Including Rs. 754 invested, there was total expenditure of Rs. 3,830 exclusive of English medicine, towards which Government paid Rs. 2,074. There being a large cash balance and money invested, shows that the dispensary may now be classified and the Government contribution assimilated to that of other places.

*Bhowanipore.*—The committee met four times, and the civil surgeon inspected twice in 1880 and visited often. There were 10,540 out-patients against 10,903, the average being 88 against 105. The neighbourhood was comparatively healthy. The expenditure, including medicines, was Rs. 3,038, which also includes Rs. 757 invested. The Government paid Rs. 1,300 which may now be reduced to the usual amount and the dispensary may be classified.

*North Suburban Dispensary.*—The committee met five times. The civil surgeon paid five visits and the Magistrate two in 1880. There were 654 in-door and 4,418 out-door, against 587 and 3,491 in 1879, the averages being 34 and 36, against 30 and 29 (31 and 30 were erroneously reported last year). The death-rate was 10 per cent. against 8 in 1879. It had been the practice here to refuse moribund persons, and old and incurable cases were transferred to Sealdah. This practice was not followed in 1880. There were 37 major operations in 1880 against 87 returned in 1879, and four deaths against six. Analysis of the hospital records of 1879 shows the figures to be apparently worthless. It is probable that operative surgery has not decreased at all. There was total expenditure of Rs. 9,858, including the investment of Rs. 2,327. There was also a good cash balance. The Government paid Rs. 2,022 exclusive of police diet. The whole of this, therefore, and something more was invested. In other words it is not wanted. The dispensary may be classified as an independent institution. Establishment was excessive and has been reduced. The civil surgeon was

much displeased with the management of this dispensary, and with the neglect of the assistant surgeon in charge in 1880. He ascribes this to his having been allowed too many subordinates and servants, but the civil surgeon's efforts for improvement were opposed by the managers. The staff is still too large.

*Barisha.*—The committee met here seven times. The civil surgeon paid four visits. The fine in-door accommodation was not utilized until December 1880, in which month four patients were received. The out-patient attendance steadily falls. There were 5,088 patients in 1880—the smallest number yet recorded—against 5,331 in 1879, the average being 36 against 42. The expenditure was very large, viz. Rs. 3,381, but of this Rs. 1,300 was for building. Establishment cost Rs. 1,940, and the Government paid Rs. 1,000 of it. The dispensary has been established on a larger scale than the wants of the sick poor have justified. The minor establishment is reasonable, but a second class assistant surgeon is not wanted.

*Garden Reach or Apcar Dispensary.*—This dispensary ceased to be a Government institution in October 1880. There were 7,656 out-patients treated up to that time. The labour of management and nearly all the expense had been accepted by Mr. Apcar, who now maintains his useful dispensary as a private charity.

*Russapugla.*—A first-class dispensary maintained by private endowment. The committee met monthly and the civil surgeon visited twelve times in 1880. There were 271 in-door and 6,954 out-patients, against 206 and 7,054 in 1879, the averages being 12 and 62 against 11 and 56. The death-rate was 16 per cent. There were 17 major operations with two deaths. The total expenditure was Rs. 5,133. The charge for medicine was exceedingly high.

*Baraset.*—The dispensary is not yet classified. The committee met monthly. Frequent visits were paid by the Commissioner and district civil officers, and four by the civil surgeon. There were 114 in-door and 4,214 out-door patients in 1880, against 114 and 4,410 in 1879, the averages being 4 and 36 against 6 and 34. The death-rate was 8 per cent The compounder does a great deal of the work here it is said. There were 14 major operations with no death. None of them were formidable. There was total outlay of Rs. 2,614. Of this Rs. 2,206 was for establishment and Government paid Rs. 1,800. The dispensary should be classified, and its cost be assimilated to the work done. A first-class hospital assistant would be sufficient: no Government money is required

*Barrackpore.*—This dispensary was closed in October. The grant from the cantonment fund was withdrawn under military orders, and no funds remained. The dispensary was not useful.

*Diamond Harbour.*—The committee met ten times. The Commissioner and Magistrate both visited the dispensary, and the civil surgeon inspected once in 1880. There were 3 in-door and 1,963 out door patients, against 6 and 1,335 in 1879. The averages were 0·01 and 8, against 0·01 and 9. There were five deaths recorded, two of them presumably among out-patients. Two doubtful operations were returned. There was total outlay of Rs. 547, and independent income amounted to Rs. 738. The Government contribution, viz. Rs 180, is not required. The dispensary is useless to the public.

*Canning Town.*—It is said that there is no committee here. The civil surgeon inspected once. There were 1,407 out-patients returned, against 2,693 in 1879, the average being 10 against 10. The people are said not to value the dispensary There was outlay of Rs. 392. whereof Rs. 345 was for establishment. No payment by Government is recorded. The Port Canning Company and the railway supply the funds.

*Bistopore.*—The committee held 15 meetings The civil surgeon inspected once in 1880. There were 2,378 out-patients against 2,162 in 1879, the average being 48 against 43, These averages are doubtful. There is a return of surgical operations, which is an absurd fiction on the face of it. The expenditure was enormous, amounting to Rs. 910 without English medicine, whereof Rs. 756 was for establishment, the Government paying Rs. 480. The establishment is wasteful. The dispensary is not classed, and Government money may be withdrawn. There are ample means without it, for maintaining a dispensary on an adequate scale.

*Satkhira.*—The committee here met monthly. The civil surgeon paid no visit. There were 134 in-door and 2,008 out-door patients in 1880, against 118 and 2,012 in 1879, the averages being 4 and 15 against 3 and 20. The death-rate was 5 per cent., pointing to slight illness. There were 11 unimportant operations The outlay was very large, viz. Rs. 2,386, whereof Rs. 1,798 was for establishment. The Government paid Rs. 768. The excess of income over expenditure exceeded the Government grant as did the unexpended cash balance. No Government money is required even for the existing dispensary. The scale of establishment is much too high for the wants of the charity. The dispensary should be reclassified and supported without Government aid. There is no work for an assistant surgeon.

*Taki.*—The committee met 11 times. There were 1,613 out-patients in 1880 against 1,718 in 1879, the average being 38 against 45. The averages are doubtful. There was total outlay of Rs. 1,415, including Rs. 487 invested, of which Rs. 744 was for establishment. Government paid Rs. 599. There was investment of Rs. 487 made during the year. Government money is not wanted. The dispensary may be classified and made independent

with the ample existing means—viz. the payment of the widow of Baboo Tara Sunker Rai. Subordinate establishment is wasteful.

*Bussirhat.*—A sub-divisional dispensary. The committee met 13 times. The Commissioner visited three times, and the civil surgeon once. There were 1,208 out-patients against 1,032 in 1879. The average was 13 against 14. There is a worthless list of alleged operations. A total outlay of Rs. 373 included Rs. 269 for establishment. Government paid Rs. 171 including medicines. A compounder and servant are paid needlessly. There is a sub-divisional native doctor. The dispensary may be closed, or made independent of Government aid.

*Goburdunga.*—The committee met 10 times. The Magistrate and other district civil officers visited the place. The civil surgeon made no inspection. There were seven in-door and 2,647 out-door patients in 1880, against 20 and 2,759 in 1879, the averages being 0·1 and 31 against 0·5 and 32. The return of operations is untrustworthy. The native doctors of this district appear to have stock names for operations which they enter in their returns. All the figures are probably fictitious. The expenditure at Goburdunga was enormous, viz. Rs. 1,164, of which Rs. 674 was for establishment, Government paying Rs. 263. There are ample private means for maintenance of a dispensary, adequate even to the alleged work. Government money may be withdrawn. A compounder, dresser, and servant were needlessly paid.

*Shamnuggur.*—The committee met monthly. The civil surgeon made no inspection. There were 904 out-patients in 1880 against 908 in 1879 (a suspicious similarity) the daily number being 22 against 23. There was expenditure of Rs. 666 for this return of work, of which Rs. 634 was paid for establishment. Government contributed Rs. 239. The closing balance exceeded this amount. Government aid should be withdrawn and the dispensary closed, unless the residents wish for an independent institution. The native doctor observes: "The dispensary is only comfortable to the subscriber in whose house the native doctor lives and the dispensary is kept."

*Harinari.*—The committee met monthly. The civil surgeon made no inspection. There were returned 7,843 out-door patients in 1880 against 7,020 in 1879, with an average of 87 against 93. The figures are untrustworthy, as is the return of 32 major operations. There was total expenditure of Rs. 763, of which Rs. 628 was for establishment, the Government paying Rs. 280. There was a cash balance of Rs. 485, so that Government money may be withdrawn. The municipal and private subscription with due economy are sufficient. Rs. 94 was charged for contingencies which is unexplained.

*Naihati.*—The committee met seven times. The civil surgeon inspected twice in 1880. There were 4,144 out-patients against 3,336 in 1879, the daily number being 55 against 52. The total expenditure was Rs. 1,156, and the total income Rs. 1,525. Government paid Rs. 298 as salary. Notwithstanding large arrears, there was a cash balance exceeding this amount, which is not required.

*Nawabgunge.*—The committee here met monthly. The civil surgeon made no inspection. There were 2,678 out-patients in 1880, against 2,102 in 1879, the daily number being 28 against 21. The expenditure was very large, viz. Rs. 603, without medicines, of which Rs. 538 was for establishment. An useless compounder was kept. Government aid may be withdrawn. There was investment of Rs. 500.

*Khoorda or Agurpara.*—Here the committee met monthly. The civil surgeon made no inspection. There were 1,871 out-patients in 1880, against 2,011 in 1879, with daily number 26 against 23. The expenditure was much too large for the work, viz. Rs. 785, with Rs. 608 for establishment. There is a large cash balance, and no Government money is required.

**Nuddea district.**

The report is complete in all respects but one. It gives no account of committee meetings in outlying dispensaries, which the Commissioner notices. The Magistrate observes that all the dispensaries are useful and well regarded by the people, and alludes to great prevalence of fever in the district. He visited them all, and some of them more than once in 1880.

*Kishnaghur.*—During the year 172 in-door and 5,743 out-door patients were treated, against 148 and 4,963 in 1879. Fever prevailed late in the year. The death-rate was 16 per cent. in 1880 and 12 in 1879. Hopeless cases of fever with organic diseases were more numerous. The dispensary was transferred to the municipality in June 1880, but Government pays the full salary of the assistant surgeon. The dispensary committee met eight times during the year.

*Natuda.*—There was falling off here of upwards of 700 patients notwithstanding great prevalence of fever. The assistant surgeon alleges great healthiness of the neighbourhood, but the thana returns show more than double the mortality of 1879. The Commissioner and Magistrate are as much dissatisfied as the civil surgeon. The Magistrate observes that Natuda is the only dispensary in the district which is not looked after by either a municipal committee or Sub-divisional Officer, and is making further enquiry. The civil surgeon thinks the people seek other aid, as the novelty of the institution has waned. It has not fulfilled the purpose of its founder, and its affairs are under the consideration of Government. In 1878, 1879, and 1880 the numbers were 4,529, 4,057, and 3,338. It was twice visited by the civil surgeon in 1880. The in-patient ward is useless and should be closed.

*Santipore.*—The municipality has taken charge of this dispensary, in which 1,710 patients were treated in 1880, against 1,590 in 1879. The town has several practitioners of

medicine qualified as hospital assistants. The dispensary was visited three times during the year.

*Ranaghat* dispensary is also now under the municipality. In 1880 there were 21 in-door and 1,247 out-door patients, against 31 and 1,180 in 1879. Reduction of in-door patients is ascribed to decreased prevalence of bowel disorders, &c., but such numbers are insignificant and can have no relation to public health. The dispensary received four visits from the civil surgeon. The in-door practice is nominal, and the ward should be closed.

*Woolah.*—In charge of the municipality. Patients numbered 1,086 in 1880 against 698 in 1879. The civil surgeon paid four visits.

*Meherpore.*—Municipality will take charge if they have not already done so. The dispensary suffered from frequent change of medical officers in 1880. There was increase of work, viz. 2,946 out-door and 17 in-door patients in 1880, against 2,222 and 12 in 1879. The in-door ward is evidently of no public use. The dispensary was visited thrice.

*Chooadangah.*—Funds are collected with difficulty here. The attendance comprised 1,857 out-door and 12 in-door patients, against 1,590 out-door patients in 1879. The in-door ward is useless to the people. The dispensary received three visits.

*Bongong.*—A sub-divisional dispensary, with an active Sub-divisional Officer. There were 1,405 out-door and six in-door patients in 1880, against 1,298 out-door in 1879. In-door practice is nominal. The dispensary was visited four times.

*Korulgachee.*—Subscribers refused to pay the guaranteed amount, and the dispensary was closed on 1st July 1880.

**Kooshtea sub-division.**

The *Kooshtea* dispensary is the subject of a separate report by the civil medical officer. Attendance both of house and out-patients fell in 1880, the number of the former being half that of 1879. The Magistrate advises reduction to the grade of a sub-divisional dispensary, as subscribers are very troublesome and a guarantee is not obtainable. The dispensary was inspected six times by the medical officer and twice by the Magistrate. The average attendance was one in-door and 15 out door patients.

**Jessore district.**

The report from this district is very complete, and the administrative work of the year is set forth in an interesting review by the Commissioner. A report is also furnished in some detail by the Magistrate, who remarks on the attention received by the dispensaries at the hands of the civil surgeon. In Jessore there had been a large number of unclassified dispensaries. Salaries appear to have been sanctioned formerly under no regular system, and it is not easy to trace their origin in all cases. In some a personal allowance to an incumbent has been continued to his successors as a fixed salary. This has been corrected as soon as discovered. For other irregular payments there is no remedy but classification of dispensaries. Classification has been effected in several instances, and the work is in progress. The Commissioner records some improvement in the activity of committees, but is not satisfied with the results of the continued efforts of his officers in this direction, or with their success against defaulting subscribers. There was a total increase of 3,616 in the number of patients, of which 2,051 were due to the new dispensary at Morellgunge. All the dispensaries except two were twice visited by the civil surgeon.

*Jessore.*—The dispensary passed into municipal hands in September. There were large arrears of subscription. There had been eight meetings of committee prior to transfer. The dispensary was visited by the Magistrate and daily by the civil surgeon. Attendance included 201 house and 5,123 out-door patients, against 233 and 3,862 in 1879; the deaths were 12 per cent. against 13 in 1879. Operative surgery was very successful. There was one death only in 30 cases of major operation, of which 23 were performed by the civil surgeon.

*Naldanga.*—The Committee met three times only without the president or vice-president attending. The Rajah is the sole or chief local supporter. Attendance was scanty. There were 2,867 cases treated against 2,774 in 1879, but the daily average was 21 only against 22. The Rajah proposes an in-patient ward, but the prospect of advantage seems very small. It is said that three major operations were performed, but as they were all for dislocation of the jaw, they probably existed only in the native doctor's imagination. The dispensary was twice visited.

*Chandra.*—The committee did not meet, the affairs of the dispensary receiving attention from the secretary only. It was once visited by the civil surgeon, the road became impassable late in the year. Attendance was the same as in 1879 and very small, 1,701 patients, with a daily average of 12, against 1,710 and 13.

*Sreedhurpore.*—A new hospital is projected. Committee met monthly and oftener as required, and, with the zemindars, showed much interest in the dispensary. Money abounds. The civil surgeon paid three visits. There were 2,115 patients treated, with an average of 20·6, against 1,912 in 1879, with an average of 18·9. The numbers are small for a dispensary which receives so much local attention and which is very favourably noticed by the Magistrate.

*Khoolnah.*—Committee met seven times against three in 1879, and the civil surgeon paid three visits. There were 10 in-door patients against 24 in 1879; of which latter, however, 13 were cases of injury; 1,386 out-patients produced a daily average of 14, against 2,149 and 30 respectively in 1879. Ague was less prevalent in 1880. Funds are low and a guarantee bond has not been obtained.

*Dowlutpore.*—This dispensary is only four miles from Khoolna; there were three committee meetings, and the civil surgeon visited twice. Here also ague, it is said, was less prevalent than in 1879. Attendance fell to 1,040 from 1,424 in 1879 and 1,539 in 1878. The corresponding averages were 17, 30, and 36. Local subscriptions are small, but a trust estate provides money for the dispensary. Its utility is questionable. The statements regarding prevalence of fever at Khoolna and Dowlutpore appear to rest on dispensary figures, and therefore require confirmation.

*Bagirhat.*—There were seven committee meetings, and two visits from the civil surgeon. Subscriptions much in arrear. There were 77 in-door patients, with 1·5 for daily average: 65 were cases of injury. Out-patients numbered 1,176, and averaged 10·3, against 1,316 and 12·7 in 1879. The value of the dispensary is nominal.

*Jhenidah.*—Committee met monthly and the civil surgeon inspected twice. In-door patients numbered 14, mostly police cases, with an average of one. There were 3,923 out-patients, with at average of 18. The ailments must have been nominal. The figures of 1879 were in-patients 18, average 0·6; out-patients 3,692, average 18. Conversion to the grade of a sub-divisional dispensary has been recommended. Lately the dispensary has been closed altogether for want of funds.

*Nurrail.*—There were seven committee meetings and two visits from the civil surgeon. The dispensary was founded in 1878 by a zemindar. Attendance in 1880 comprised 1,770 persons, and a daily average of 14. The figures of 1879 were 1,518 and 18. The people make very little use of the opportunity offered them.

*Magura.*—The dispensary is located in the sub-jail hospital. There were 15 meetings of committee and two visits of the civil surgeon. In-door patients numbered 20, of which 16 were cases of injury. There were 3,280 out-patients, with a daily average of 10. Subscriptions were in arrears. The out-patients in 1879 were 2,441, and the average 7. The dispensary serves no purpose as a medical charity. There could have been very little sickness among the patients if the total is true.

*Morellgunge.*—The dispensary was opened in January 1880, but its working fairly commenced on 9th March. There is no building, the dispensary being held in a room of the zemindar's cutcherry. The civil surgeon visited once, his second attempt being frustrated by illness. There were 2,051 patients returned as treated, with a daily average of 22. The committee met only twice.

**Moorshedabad district.**

The Commissioner reports that with one exception dispensary committees met monthly in this district. The public health of the district did not differ materially from that of the previous year, as shown by death registration, and the sickness treated in dispensaries corresponded with it.

*Berhampore.*—Accommodation here was much needed, and long contemplated improvements were begun and nearly finished in 1880. Out-door patients numbered 7,899 and in-door patients 466 in 1880. In 1879 the numbers were 8,958 and 458. The average of out-door attendance was 57 against 63, and of in-patients 22 against 21. The death-rate was 21 against 19, and is ascribed to large numbers of moribund persons. There were 28 major and 558 minor surgical operations. The results are not given.

*Moorshedabad.*—The city dispensary received 9,461 out-patients and 371 in-door, against 9,786 and 416 in 1879. The averages were out-door 52 against 60 in 1879, and in-door 15 against 18. The death-rate was 12·6 against 12·7. There were 61 major and 550 minor operations; the results are not given. There is a midwifery ward in this dispensary into which about 15 persons are annually received.

*Azimgunge.*—Supported solely by Rai Dhunput Singh Bahadoor. There were 9,205 out-door and 314 in-door patients in 1880, againt 9,036 and 365 in 1879. The averages were the same in the two years—viz. 52 out and 10 in-door patients. The death-rate was 19 against 21 in 1879. Major operations numbered 23 and minor 473. There is a nominal committee which does not meet.

*Lalgola.*—This is also a first class dispensary, most liberally supplied by Rao Jogendro Narain Rai. There were 3,216 out-door and 202 house-patients, against 3,204 and 181 in 1879. The average was out-patients 21 against 25, in-patients 8 against 11. The death-rate was 5·9 against 11·6.

*Jungipore.*—Here a new and suitable house has been built. There were 6,019 out-patients and 115 house-patients in 1880, against 5,331 and 87 in 1879. The averages were 46 and 6 against 65 and 8. The death-rate was 24 against 20, which high rate is opposed to the evidence of the average, but is explained by 11 deaths of persons accidentally burnt.

*Kandhi.*—Here there were 6,298 out-patients and 95 house-patients in 1880, against 5,527 and 138 in 1879. The averages were 71 and 5, against 68 and 4. The death-rate was 23 against 15·9 in 1879, which is unexplained.

## RAJSHAHYE AND COOCH BEHAR DIVISION.

**Dinagepore district.**

The civil surgeon's report on this district by its arrangement adds much to the labour of separating the histories of dispensaries, though it is not otherwise wanting. He will not be responsible for the accuracy of figures, except for those of the sudder dispensary which he visits daily. One dispensary *(Patiraj)* was opened on 30th December 1879, but not

being used by the people, was closed in September 1880. The whole of the dispensaries were twice inspected. From one institution, known as the Rajbari dispensary, no report has been received. It is not included in the official list, being supported entirely by a native lady. The civil surgeon has given much attention to removal of superfluous servants throughout the district

*Dinagepore.*—The sudder dispensary is not yet classified, though commonly assigned to class III, grade 2. The committee met four times only in 1880. There were treated 319 house-patients and 3,118 out-patients, against 274 and 3,079 in 1879, which figures may be trusted. The private *Rajbari* dispensary, two miles distant, receives a similar number. The civil surgeon notices the rarity in his district of surgical diseases, especially calculus and cataract, nevertheless major operations increase slowly at the sudder dispensary, 8, 12, and 14, being recorded in the last three years; for, the civil surgeon says, "one intent upon making surgical operations can find cases" The death-rate of house-patients was 17 per cent. against 18·9 in 1879.

*Raigunge.*—The committee held 12 meetings. The place is thickly populated, but the people do not use the dispensary. The number for three years of out-door patients have been 1,450, 1,284, and 1,463. The poor of the neighbourhood are said to rely on charms in sickness.

*Choramun.*—The dispensary is supported by the Court of Wards. The committee met monthly in 1880. The attendance, though an increase is reported, is very insignificant, 1,348 in 1880, against 940 in 1879 and 889 in 1878, all out-patients.

*Mahadebpore.*—The committee met three times only. A new committee was nominated, and proved as apathetic as the old one. The dispensary is of no public use. The total numbers treated being 933 in 1880 against 912 and 785 in the previous years; all out-patients.

*Baloorghat.*—The committee met four times only. The dispensary received only 641 out-patients. It has done nothing yet to justify its existence.

Rajshahye district.

The civil surgeon reports that fever was very prevalent in this district, but cholera and small-pox less so than usual. He speaks of the very backward state of the principal town in sanitary matters.

*Rampore Beauleah.*—The dispensary is supported by a handsome endowment, the Prosono Nath Fund, which, however, is said to be insufficient for the wants of the place, and reductions are threatened. The committee of the fund met twice at the dispensary in 1880, and the civil surgeon paid daily visits. He speaks unfavourably of the assistant surgeon in charge and of the general state of the dispensary. There were treated 299 house-patients in 1880 against 306 in 1879. The reduction is ascribed to limitation of funds, which, however, cannot be said to have produced much effect. Out-patients increased to 5,822 from 5,617 in 1879. Surgical practice was small. Cases requiring it did not occur, though the civil surgeon never turned one away and operated himself when necessary. The deaths were 36, or 12 per cent., chiefly among helpless travellers. The municipality appears to contribute nothing to the dispensary It was visited by the Commissioner of the division, the Sanitary Commissioner, and Inspector-General of Jails.

*Nattore.*—There is a dispensary of the first class here now supported by the abovementioned fund, and controlled by the sub-committee of the fund. Dr. Bensley notices that the native doctor, after the manner of his class, leaves the dispensary to the compounder, and employs himself elsewhere. He is said to be extravagant also. There were 144 house-patients and 3,696 out-patients in 1880. The surgical returns are evidently discredited by Dr. Bensley. The dispensary received four visits from the civil surgeon, but the committee met only once. The Sanitary Commissioner paid a visit.

*Kuruchmaria.*—Baboo Raj Kumar Sircar pays all expenses here except the half salary of the native doctor. Only 920 out-patients were registered in 1880. The dispensary is 50 miles from the station, and accessible only by boat in the rains. There is no committee. The civil surgeon visited the place once, which cost the station, I fear, much more than the dispensary is worth to its neighbourhood.

*Tahirpore.*—The Court of Wards supports this dispensary in all but half the native doctor's salary. It exists for the ryots and dependants of a wealthy estate, which the civil surgeon thinks need not be relieved of any portion of the cost. There were 30 in-patients and 3,447 out-patients in 1880, both figures being less than those of the previous years. The in-door department being useless, was abolished in 1880. Dr. Bensley thinks reduction in the figures probably brings them nearer to the truth. The committee did not meet, though some of its members visited the dispensary, as did the Sub-divisional Officer. The civil surgeon paid one visit.

*Kasimpore.*—The dispensary is situated in a very populous and sickly neighbourhood, and ought to be useful; but no interest is felt locally in its working, and the civil surgeon proposes its closure. The committee met five times. Dr. Bensley distrusts the figures, which show 1,239 patients in 1880—an insignificant total even if it were true. He visited the place once.

*Pooteah.*—Ranee Monmohinee Debya supports this dispensary in the first class. The civil surgeon fears that its benefits are confined to the "underlings and dependants" of a few resident zemindars, and discredits the native doctor's returns, which show 5,298 out-patients treated in 1880. There is no committee. The dispensary was twice visited by the civil surgeon.

*Lallpore* is also a first class dispensary, supported by Maharani Surut Soondri Debya. The native doctor is said to take interest in his dispensary, as the place affords no private practice; 2,434 out-patients are returned for 1880 against 1,995 in 1879. There is no committee. The dispensary was once visited by the civil surgeon.

*Bulihar.*—A first class dispensary, liberally supported by Rajah Kristendra Roy. There is no committee, nor is any needed where this Rajah is. The actual work done is small, and chiefly among the Rajah's own people, 1,790 out-patients in 1880 and 2,020 in 1879. The civil surgeon paid one visit. The place is 50 miles from his station, and the road difficult.

**Rungpore district.**

The civil surgeon's report is full, and is marginally annotated by the Magistrate with some pointed criticism. Malarious fever is reported to have prevailed in the district, but it is added that the town, which was formerly worse, fared better in 1880 than the district. This is ascribed to drainage operations. The present Magistrate thinks the conclusion premature, and the facts support him. The appreciation of cinchona febrifuge has increased in the district largely. The zemindars of the district contribute generously to public objects. The civil surgeon contends that since, under the order of Government compelling payment for medical stores, not a single dispensary has been closed in this district, it is proved that the dispensaries "were wanted, and were established with *boná fide* charitable objects." This may be true; but all that is proved by the fact is that the richer classes wanted English medicine supplied to the dispensaries, and would pay for it when they could no longer get it given to them. Dr. Ghose also says that he has "satisfied himself by inspection" that the returns of the two town dispensaries are correct. He adds that he inspected all the district dispensaries, but not so often as he could wish, in consequence of sickness at head-quarters. The Magistrate comments unfavourably on this statement, and from the facts before him, thinks out-lying dispensaries should have had more attention.

*Rungpore.*—The station dispensary was placed in class III, grade 2, and brought under the municipality in 1880. It received 410 house-patients against 326 in 1879, with a daily average of 14 against 13. The death-rate was 11·7 per cent., which is not high, as destitute wanderers were not uncommon here. There were 19 major operations, including ten cases of lithotomy and three of scrotal tumours. One death only occurred. Further westward, in sub-Himalayan regions, calculus abounds. There were 10,623 out-patents against 9,019 in 1879, and a daily average of 46 against 40. Malarious fever contributed a third of the total. Subscriptions are in arrears, Europeans only paying regularly. The work done bears a very favourable proportion to the cost of it. The Magistrate, however, is dissatisfied with the manner in which accounts are kept, and with the general method and order of the institution. This will no doubt be remedied.

*Mahigunge* is an out-door dispensary in the old town, near a large market, and is said to be very useful. There were 5,304 patients in 1880 against 6,003 in 1879. The hospital assistant says there was better health in the neighbourhood. In 1879 the civil surgeon distrusted the figures, and scrutiny is a more probable cause of reduction. The hospital assistant requires this to prevent his delegating his duties to the compounder. The civil surgeon visited the dispensary twice in each week of 1880.

*Olipore.*—This dispensary is maintained by Maharanee Surnomoye, at the centre of her large estate. There were 43 house and 5,225 out-patients in 1880, against 70 and 4,322 in 1879. The daily average was 2·9 against 4·8 in 1879 of in-patients, and 46 against 39 out-patients. The present Magistrate assumed charge of the district after the year closed, and therefore had not become acquainted with the outlying dispensaries. There is no committee. The civil surgeon visited the place twice, and found large numbers of patients under treatment.

*Kakina* dispensary is entirely supported by a zemindar, Baboo Mohima Runjun Rai. There were 44 in-patients and 6,492 out-patients returned in 1880, with daily averages of 2 and 29. The civil surgeon considers the figures to be true; but the total is condemned by the average, unless sickness was nominal. There is a committee but it does not meet, and the supporter does not appear to pay much attention to the working of his dispensary.

*Tushbunder.*—This became a first class dispensary in 1880. There is a committee which never meets. The attendance in the year comprised 4,512 against 5,504 in 1879, with a daily average of 23 against 26, a falling off ascribed to the presence of another practitioner employed by the supporter. The civil surgeon paid two visits in 1880.

*Saptana.*—The supporter of this dispensary is dead, and his estate is under the Court of Wards. There were 3,340 patients in 1880 and a daily average of 18, against 3,942 and 20 in 1879. The difference is unexplained. The "committee has virtually ceased to exist." The dispensary is of very little use to the people.

*Batashee.*—The supporter is Rai Luchmiput Singh of Moorshedabad, who keeps the dispensary in the interests of his tenantry. It returned 4,150 out-patients, and a daily average of 29 in 1880, against 4,078 and 30 in 1879. There is no committee, but the local agent manages. The civil surgeon visited once, but expresses himself satisfied with the figures nevertheless.

*Dinhatta.*—An out-door dispensary of class III, grade 3, of which the guaranteed income is paid by an estate. There were 2,174 cases returned in 1880 against 3,720 in 1879, and

a daily average of 18 against 27. The civil surgeon, visiting without giving notice, found no one in the place, though it was the hour of work; nor did the registers show any attendance on the two previous days. It is not said whether any explanation was asked for. The dispensary is probably quite worthless and its returns pure fictions. There is a nominal committee. The charges per patient at this dispensary were higher than at any other in the district.

*Dimla.*—An out-door dispensary of class III, grade 3; the guaranteed income paid by a zemindar. There were 2,463 patients returned in 1880 against 2,029 in 1879, with an average of 16 against 13. It is said that European medicine is looked on with suspicion here. The place is close to Tushbunder, however, where the opposite opinion seems to have advanced unusually. The committee met five times and the civil surgeon visited once. Charges were as high as they were in the last named aided dispensary. It would seem that if these two dispensaries had been conducted as economically as others in the district, Government money would not have been wanted.

*Kishoregunge.*—An out-door dispensary in class III, grade 3; the local income guaranteed by a single contributor. The returns show 3,187 patients in 1880 against 2,834 in 1879. The average was 15 against 17, showing either a fictitious total or nominal illness; but the civil surgeon "believes the figures to be correct." The committee met three times, and the civil surgeon visited once.

*Kurigram* is the head-quarters of the sub-division. An assistant surgeon held the dispensary. The returns show 4,115 out-patients against 3,135 in 1879, and a daily average of 20 against 16. The dispensary committee met four times, and the civil surgeon paid three visits. The institution does not show much public utility.

*Bagdogra.*—An out-door dispensary at sub-divisional head-quarters, which will soon be removed elsewere. It is under Rule VII of the Code. There were 1,475 patients returned in 1880, with a daily average of 11. The dispensary is useless at present.

*Gyabunda* is also a sub-divisional dispensary. It returned 1,905 patients in 1880, with a daily attendance of 14. The civil surgeon paid two visits. The dispensary is useless.

**Bogra district.**

The reports contain no information on the general health of the district. The Magistrate held extreme views as to the inadvisability of his interfering in the affairs of dispensaries. He alludes to the practice of the sudder dispensary as affected by the growing number of private practitioners who dispense from their own stores. Any change which this may have affected is no doubt advantageous, for as private practice is not gratuitous, it can only have affected the dispensary by diversion from it of persons who had no right to use it.

*Bogra.*—The dispensary is now under the municipality, and difficulties arising from arrears will disappear. Collections were falling off before this. The Commissioner paid two visits and the Sanitary Commissioner one, in 1880. There were 136 house and 3,619 out-patients, against 171 and 3,714 in 1879. Public health in the town is said, perhaps by inference, to have improved; but the number of house-patients was less than in any year since 1872. This is attributed to increased care in selection. The death-rate was 22 per cent. against 25 in 1879. There was very little operative surgery, and the general attendance was very small for a populous neighbourhood, while the establishment calls for reduction.

*Noakhilla.*—Rajah Promothonath Roy supports this dispensary. The committee met monthly; in-door patients numbered 33 and out-door 1,758, against 24 and 1,774 in 1879. The averages were 0·80 and 20, against 1·0 and 21 in 1879. The dispensary is of little use to the people. It exists mainly for servants of the estate, but nevertheless it draws the civil surgeon from his station duties. The returns are worthless. It is said that only two deaths occurred in the dispensary, both from injuries.

*Sherpore.*—The dispensary is under the municipality. There were 1,856 out-patients in 1880 against 1,812 in 1879, with a daily average of 16 against 20. A ward was opened during the year for indigent travellers, in which ten persons were received. It was evidently an asylum rather than a place for medical treatment, for four out of the ten died there. The dispensary is not useful. A superfluous compounder has been discharged.

**Pubna district.**

The civil surgeon reports that the general health of the Pubna district was good in 1880.

*Pubna*—The management of the station dispensary has been taken by the municipality. There was some increase of in-door and decrease of out-door practice. The first is ascribed to rise in police cases, the second to general health. The daily number in 1880 were 9 house and 30 out-patients, against 7 and 34 in 1879. The death-rate was 12 per cent.

*Serajgunge.*—The dispensary is not well situated or furnished, but is said to be useful. Attendances fell in 1880. The daily averages were in-patients 3, out-patients 20. This is very small, and there is an assistant surgeon in charge of the dispensary. The municipality manage it. The civil surgeon paid two visits.

**Darjeeling district.**

The reports give no information on the general health of the district. The dispensaries were all inspected by the Deputy Commissioner.

*Darjeeling.*—The municipality manages the dispensary, which is not classified. European residents and visitors contribute nearly all the funds, Government paying the native doctor's salary. The attendance was in-patients 161, out-patients 3,065, against 166 and

2,967 in 1879. There were 21 deaths against 26, or 13 per cent. against 15. There were very few surgical operations. In-door patients averaged seven and out-door patients 13 in 1880. Hill people consider medicine to be a branch of demonology, and as persons sometimes die in hospital, the spirits lingering there made it an unfit place for residence. Dr. Birch, however, notes with gratification the details of two obstetric cases, which, though they were said to have had a satanic origin, were brought to the dispensary. Malarious fever and worms contributed largely to the attendance. The latter are ascribed, by the Deputy Commissioner, to the eating of pork. Tea-planters distribute medicines to their labourers, who form a large section of the district population. Mr. Waller justly considers this to be a reason for the small attendance at the dispensaries. A ward for Europeans has been set on foot for the benefit of the subordinates in tea-gardens. The civil surgeon is sanguine regarding the future of it.

*Kurseong.*—The dispensary is supported entirely by Government, and is not classed. The civil surgeon thinks its separate maintenance is not required, as the Department of Public Works has a hospital assistant and the Tramway Company an assistant surgeon, who reside at Kurseong. There attended 1,380 out-patients in 1880 against 1,742 in 1879; and 29 in-door patients were treated against 25. There was a death-rate of 27 per cent. I can bear witness to the excellent order in which the dispensary was kept in 1880. There was a daily attendance of 16 out-patients. Establishment was reduced during the year.

*Kalimpong.*—This dispensary is also supported entirely by Government. It was opened at the end of 1879, and is reported to have been successful. There were 2,202 patients treated during the year. The daily average attendance was six. There must be something wrong here. The daily average gives only 2,190 attendances in the year, or less than one for each of the alleged patients. Population is scanty at Kalimpong. The Sub-divisional Officer speaks highly of the activity and usefulness of the hospital assistant in sanitary work. The cost of the little dispensary is large, and that of English drugs particularly so.

*Phansidewa.*—There is a committee here which met three times in 1880. The civil surgeon paid no visit. He made several attempts, which were frustrated by urgent station work. There were 1,092 out-patients against 1,195. The decrease is unexplained. The expenditure was very large. There is a special fund here which supports the dispensary. The Deputy Commissioner speaks well of the ability and energy of the hospital assistant, but the work gives no evidence of either. The dispensary is not worth its cost.

**Julpigoree district.**

No summary report has been received from Julpigoree notwithstanding repeated calls. The district is disadvantageously situated in respect of its medical charge. The following particulars are extracted from the returns of the dispensaries:—

*Julpigoree.*—The committee met every month. The assistant surgeon in charge of the station visited regularly. The Commissioner of the division and Sanitary Commissioner both inspected the dispensary once, and the Deputy Commissioner frequently. There were 207 in-patients and 3,766 out-patients in 1880 against 247 and 3,702 in 1879. The averages were eight and 23 against the same numbers in 1879. Labourers employed on the State railway had been removed from the place. The general health of the neighbourhood was not good. The death-rate was 19 against 26 per cent. The establishment is rather extravagant.

*Titalyah.*—Formal meetings of the committee were irregular. There was no medical inspection. The Deputy Commissioner paid two visits. There were 26 house and 1,497 out-patients against 36 and 1,344 in 1879. The averages were 0·9 and 16 against 1 and 17. The in-door ward is useless to the people. A compounder was maintained.

*Boda.*—The committee met twice only. No civil surgeon inspected the dispensary. There were two house and 1,002 out-door patients returned against 15 and 782 in 1879. The averages were 0·2 and 16 against 0·6 and 15. The in-door ward appears to have been closed. The dispensary seems useless to the people.

*Alipore.*—This is a sub-divisional dispensary. A new house was bought in 1879 wi, good accommodation. The committee met only twice in 1880. There were 11 in-door and 649 out-door patients against 8 and 613 in 1879.

## Dacca Division.

**Dacca district.**

The reports give no information on the general health of the district. The Commissioner notices the evidence of dispensary figures as to local health, and the subject of reduction effected in establishments.

*Mitford Hospital.*—The number of out-door patients treated was 19,320; it was higher than any figure of the past decade. In 1879 the number was 17,514. The daily average was 142 against 141. There was a daily number of 94 house-patients against 88 in 1879. Malarious fever headed the list. From cholera there was remarkable immunity, and if, as is tolerably certain, the hospital cases represent the state of the town, the effect of a filtered water-supply was most striking. Seventeen cases only were treated in the year against 169 in 1879, and larger numbers in the previous years. There were in all 1,471 house-patients, of whom 211 died. Diarrhœa, dysentery, and pulmonary diseases were very fatal. The total death-rate was 14, the lowest of the decade, which is more than accounted for by the scarcity of cholera. This death-rate must be considered low, for the hospital

receives all the moribund homeless people found in Dacca. There were 149 major operations against 168 in 1879. The percentage of deaths after operation was 13 against 8·9. Death is ascribed to disease for the most part, operation simply failing to avert it. Amputations were sufficiently numerous to give interest to the results, which however cannot be traced in the report. English medicines cost in 1880 considerably more than in 1879, which is unexplained. A new female ward is being built by Nawab Ahsanoolla. Dr. French reports very favourably of his subordinates. The institution is very valuable both as a medical charity and a school.

*Naraingunge.*—Inspected once by the civil surgeon and Sanitary Commissioner. The civil surgeon's station duties at Dacca are very arduous, and it is barely possible for him to visit each outlying dispensary twice. There were 60 in-door and 4,022 out-patients in 1880, against 36 and 3,597 in 1879. The averages were 2 and 22 against 1 and 17. There were seven deaths—three from cholera. There were 23 major operations recorded, chiefly for "dislocations and incisions." This needs confirmation. The establishment included compounder and dresser, for both of whom the dispensary afforded no work, even if it did for one. The dispensary was transferred to the local municipality in 1880.

*Joinsher.*—Inspected once by the civil surgeon. There were 3,908 out-patients in 1880 against 4,175 in 1879, with a daily average of 24 against 22. The nine major operations were for dislocations and fractures. Government pays Rs. 480 in salary. The compounder has been discharged as superfluous. The Government payment should be Rs. 180.

*Bhuggakul.*—Inspected once. There were 2,452 out-patients registered against 2,738 in 1879, with a daily attendance of 12 against 13. There were six major operations for dislocations and fractures. Government paid Rs. 480 in salary, the exact amount of the local income. A superfluous compounder and cooly have been dismissed. As the dispensary is in class III, grade 3, the Government contribution should have been Rs. 180, not Rs. 480, and the whole of this should now be paid from wages saved. The dispensary is useless, and if allowed to exist, should be placed in the first class.

*Baliati.*—Once inspected. There were 2,939 out-patients against 3,180 in 1879. The daily average was 23 against 29. The committee met once. The establishment, which should have consisted of a hospital assistant and cooly or sweeper, included compounder, dresser, apprentice, cooly, and sweeper. Of a total expenditure of Rs. 647 no less than Rs. 579 was spent in establishment. This is a striking example of money misapplied. There was more than enough to make the dispensary independent of Government aid. Government pays Rs. 180 yearly.

*Maluchi.*—Once inspected. There were 140 house and 4,504 out-patients against 160 and 3,810 in 1879, with averages of 10 and 37 against 11 and 27 in 1879. The dispensary is supported by an estate.

*Moonshigunge.*—A sub-divisional dispensary. There were 29 house and 2,348 out-patients in 1880, against 38 and 2,519 in 1879. The averages were 0·8 and 11 against 0·7 and 13. The committee met ten times. A superfluous compounder and cooly were maintained, whose wages will more than suffice to make the dispensary independent. It is not used by the people. It was inspected once.

*Jaidebpore.*—Twice inspected. There were 22 house and 2,606 out-patients in 1880 against 27 and 2,340 in 1879. The averages were 0·5 and 16 against 0·9 and 15 in 1879. The work is insignificant and takes the civil surgeon away from important duties. It is argued that a dispensary is needed here because injuries from wild beasts are frequent. The figures show that no cases of any kind are frequent. The operations were, as usual in this district, ascribed to dislocations and fractures. The police in an ordinary sub-division furnish more injuries than beasts inflict at Jaidubpore. The Government pays Rs. 360 in salary.

*Simlya.*—Once inspected. There were 2 house and 2,695 out-patients against one and 2,567 in 1879. The average was 19 against 7. The Government pays Rs. 240 annually. A compounder and durwan were maintained with nothing to do. The dispensary is not worth any public money. The figures are self-condemnatory.

*Manickgunge.*—Once inspected. There were 2,298 out-patients against 2,489 in 1879. The reduction is ascribed to good medicine being cheap in the bazar. So far as this accounts for the fall, it becomes a strong reason against maintaining a dispensary. The people are said to prefer the drugs they pay for. The dispensary therefore cannot have been a charity. There were 24 daily out-patients returned and the same number in 1879, which is suspicious. There were 17 house-patients in total, against 31. A compounder and chuprassie were paid unnecessarily, costing Rs. 18-8 per mensem, or nearly double the amount paid by Government, which is Rs. 120 yearly. It is a sub-divisional dispensary. If the compounder is retained he should receive Rs. 10 and collect subscriptions. The dispensary would still be independent of Government. The daily attendance was ·73 and 24·08 against 1 and 24 in 1879.

No information is given on the general health of the district.

**Furreedpore district.**

*Furreedpore.*—The dispensary is to be removed to a more convenient situation. It is in charge of the municipality. The Commissioner considers the movement to be a great advantage. There were 230 house-patients in 1880, with a daily average of 8, against 121 and 5 in 1879; with 6,031 out-patients, and an average of 23 against 4,608 and 19. The

local health is said to have been exceptionally good. The dispensary was visited daily by the civil surgeon. Some reduction was made in establishment.

*Madaripore.*—The dispensary has been transferred to the municipality. It was inspected twice. There were 54 house and 3,197 out-patients returned, against 40 and 3,638 in 1879, with daily averages of 1·5 and 10 against 1 and 14. The hospital assistant was careless and idle. The figures condemn themselves.

*Lonesingh.*—The committee met three times here, and the civil surgeon paid two visits. There were 5 in-door and 2,297 out-door-patients, against 6 and 2,490 in 1879, with averages of ·3 and 12 against 0·01 and 6. An useless compounder and servant were maintained. The committee oppose reduction. The dispensary is useless to the people.

*Goalundo.*—Here the committee met three times. The civil medical officer visited frequently and the Sanitary Commissioner once. There were 140 in-patients against 234. There were 1,615 out-patients returned against 1,614 in 1879. The reduction is ascribed to diminished emigration. The averages were 4 and 10. The establishment is very extravagant and should be reduced, dresser, peon, and durwan being all unnecessary. The dispensary is, however, independent of Government aid.

**Backergunge district.**

There was increase of fever in the district. The Magistrate has given much attention to the dispensaries, has visited them all, and, with the Commissioner's support, is insisting on removal of superfluous servants. Two dispensaries he thinks might be extinguished with no great loss.

*Burrisal.*—A new female ward has been nearly finished at the cost of Nawab Ahsanoolla. The committee met three times only, but the civil surgeon attended daily. The dispensary is not yet classified. Out-door-patients in 1880 averaged 52 daily, against 48 in 1879, and in-door 13 against 14 in 1879; there were 403 house and 10,739 out-patients against 385 and 9,561. There were fewer police cases. The record here is strictly kept. The civil surgeon does not allow the entry of patients, represented by friends, in the books. Subscriptions have been raised and establishment reduced to meet the cost of classifying the dispensary, which it seems can now be effected. Some patients have paid for treatment.

*Perozepore.*—The returns of this dispensary are worthless. Averages were reckoned by doses of medicine given and not by attendance of patients. This has been stopped, as has the entry of represented patients. Numbers have diminished, both totals and averages. There were 115 house and 2,510 out-patients, against 153 and 2,952 in 1879, the averages being 3·4 and 16 against 3·5 and 28. The committee met twice. The civil surgeon thinks the dispensary does much good to the people, but the people thus affected are evidently not the sick poor, for these, by scanty attendance, confirm the opinion of the Magistrate. Subscriptions are much in arrears.

*Bhola.*—The Estates Improvement Fund is the chief source of income here. There were surplus funds in 1880. There was some decrease of in-door and out-door practice; total numbers in 1880 being 55 and 1,407, against 81 and 1,120; averages being 1·4 and 11 against 4 and 12. Books were fairly well kept. This dispensary is very little used.

*Matbaria.*—The in-door accommodation is not used. Attendance fell largely when the method of record was corrected, from an average of 18 out-patients to one of 9 daily. Total numbers were 805 against 1,468 in 1879, all out patients. With this nominal work a compounder and peon were kept, and the committee appear to insist on keeping them still. The Improvement Fund contributes Rs. 1,000. The dispensary is useless to the people.

*Patiakhali.*—The records have been worthless. Under correction the average attendance has fallen from 14 to 7 patients daily. Total numbers were 1,620 against 1,495. A compounder was maintained but has lately been dismissed. The dispensary has been useless to the people.

**Mymensing district.**

The general health of the district does not appear to have been good. The civil surgeon, on very strong grounds, expresses this opinion. The numerous dispensaries received much critical attention from this officer, and from the District Magistrate, and their remarks are again reviewed in detail by the Commissioner. The consequence is that a full exposure of all the abuses to which the dispensary system is liable has been made in finding explanation for reduced numbers of patients in 1880. The falling off was in some places large, but there was equally large increase in others. A mere net reduction in 16 dispensaries, from 27,919 patients to 27,658, shows that the cause was not one of general application, and that where reduction was large the causes must have been local. The discussion of them, however, by the district officers reveals much that calls for notice. The public health has as usual adapted itself, in the statements of native subordinates, to their requirements. The civil surgeon rejects it altogether, with good reason stated, as an explanation of reduced dispensary work. Increased number of private practitioners at the sudder station is an alleged cause of reduction, to which the civil surgeon gives the obvious reply.

Deficiency in the supply of medical stores during the last quarter to outlying dispensaries, is said to have driven patients away. Mymensing suffered, in common with other districts, from the delay which I have already mentioned in the issue of sanctioned supplies, but delay in the submission of indents was the true cause of this. Scarcity could only have been felt late in the year and would not account for earlier failure of numbers. It would moreover, to the extent of its operation, have caused general failure, and there was no general failure. The civil surgeon believes that scarcity

arose in some instances from the improper issue of medicines to private patients by dispensary medical officers. The Magistrate lays great stress on the delay of supplies. He speaks from personal observation when on tour, and from hearsay, in saying that the dispensaries suffered much in popularity from failure of supply, and that their liberal supporters were disgusted with the state of things. The accident of delayed supply was too convenient a plea to be omitted by a native doctor speaking in his own defence, and the wealthier people feeling for other reasons aggrieved by the delay, doubtless pressed their sense of privation strongly on the Magistrate's notice. The Commissioner seems to attach more weight to misappropriation of stores than to delay in delivering them. Although scarcity of medicines, operating equally throughout the district during the last quarter, cannot have had much to do with very unequal results throughout the year, and has evidently been used by dispensary officers as a screen, there is no doubt that indents, and therefore supplies, were unduly delayed, and the matter, as I have said, has attention.

Fallacious records of attendance began to be corrected in October, a very potent cause of falling averages after that date. The civil surgeon mentions neglect of dispensary work, in pursuit of private practice, as another cause. He looks upon the numbers recorded as largely fictitious, having tested them carefully at his visits and received explanations obviously false. In a single instance only did the number of patients seen by him equal the recorded average, though the difference was sometimes small. He thinks the prevalence of particular diseases cannot be usefully discussed on the figures. Dr. Moorhead speaks well of the assistant surgeons at Mymensing and Tangail. Excepting the native doctors at Jamalpore, Jhawail, Netrokona, Jamurki, Bazitpore, and Nagarpore, he thinks those in his district have the "crudest ideas of medicine and surgery." Dr. Moorhead did his best to visit the large number of outlying dispensaries. A complete tour of inspection would occupy five weeks.

*Mymensingh.*—There were 195 house and 3,535 out-patients in 1880, against 235 and 4,345 in 1879. The averages were 9 and 32 against 8 and 36. The committee met four times only. The civil surgeon visited frequently. Money is abundant.

*Ramgopalpore.*—There were 2,196 out-patients in 1880 against 2,992 in 1879, with a daily attendance of 21 against 25 The civil surgeon paid two visits. There is no committee, the founder or his agent administering. The dispensary has been classified. Its figures are probably worthless.

*Sherpore.*—There were 773 out-patients here against 1,071 in 1879, with an average of ten in each year. The dispensary was about to be graded. It is useless to the people. The committee met monthly, and the civil surgeon paid one visit.

*Jamalpore.*—There were 20 house and 730 out-patients against 2 and 531. This latter figure was returned in 1879 as 1,284. There were daily averages of 0·5 and 7 in 1880 against 0·2 and 6 9 in 1879. The committee met five times, and the civil surgeon paid two visits. The dispensary is useless to the people.

*Tangail.*—There were 165 house and 2,107 out-patients against 198 and 2,412 in 1879. The averages were 7 and 26 against 8 and 34. The committee met four times, and the civil surgeon paid one visit. The establishment was unduly expensive and reduction is in hand.

*Pagulddigha.*—There were 1,309 out-patients here against 1,308 in 1879. The similarity is suspicious. The average was 12 against 14. The committee met eight times. The civil surgeon paid one visit. A superfluous compounder was maintained. The dispensary is useless, and should be closed or transferred to the first class, for which there are ample funds.

*Korotia.*—There were 2,904 out-patients against 2,465. The average was 30 against 33. It is a first class dispensary, and maintains a compounder, dresser, and chuprassie, who can do nothing but enable the native doctor to devote himself to private practice. The civil surgeon distrusts the returns, and well he may, for he found only seven patients between 8 A.M. and 3 P.M., though 22 were recorded on the previous day. The committee met five times.

*Jamurki.*—There were 76 house and 2,923 out-patients, against 84 and 3,096 in 1879. The averages were 5 and 28 against 4 and 27. There is no committee. The civil surgeon paid one visit. It is a first class dispensary, and a compounder and dresser receive each Rs. 12 per mensem.

*Nagarpore.*—There were 5 house and 2,780 out-patients, against 1 and 1,968 in 1879. The averages were 0·09 and 21 against 0·08 and 17. The committee met five times. The civil surgeon paid one visit. The in-patient practice is nominal, and the entire dispensary of little use. The compounder should be discharged.

*Jhawail.*—There were 1,190 out-patients against 1,275 in 1879, with an average of 17 against 19. There is no committee, and the civil surgeon was prevented by illness in the station from paying a projected visit. The dispensary, it was expected, would shortly pass into the first class, in which it may perhaps justify its existence. The transfer has since been made.

*Netrokona.*—There were 16 in-patients here and 1,725 out-patients, against 26 and 2,097 in 1879. The averages were 0 4 and 15 against 1 and 16. The committee met eleven times, and the civil surgeon paid one visit. A compounder was paid Rs. 10 for doing nothing legitimate. The dispensary should pass into the first class or disappear from the list. The civil surgeon saw only five patients when he visited the place.

*Hybutnuggur* shows 699 out-patients against 795 in 1879, with daily attendance of 12 against 15. The committee met monthly. The civil surgeon visited once. A compounder and cooly had Rs. 16 per mensem wasted on them. The work is insignificant and the dispensary useless as a charity. It should be made independent of Government aid, or abolished.

*Bazitpore* had 1,070 out-patients against 696 in 1879, with daily attendence of 9 against 5. The committee met four times. The civil surgeon visited once. A compounder and cooly were maintained indefensibly. The dispensary is an empty name, and should be made independent or abolished.

*Muktagachee* showed 1,576 out-patients against 1,284, with an average of 13 against 20. The committee met twice, and the civil surgeon paid three visits. A compounder and cooly were maintained, wasting Rs. 13 per mensem. The dispensary is useless.

*Ambaria.*—There were 5 house and 706 out-patients, against 1 and 610 in 1879, with averages of 0·03 and 14 against 0·01 and 15. The committee met once, and the civil surgeon visited once. A compounder and cooly wasted Rs. 15 per mensem. On two consecutive days the civil surgeon saw six and five patients. The place is very sickly, but the people will not use the dispensary.

*Kukurmari* was transferred to this district in December 1880. It showed 653 out-patients against 427 in 1879, with daily attendance of 17 against 12. The committee met four times. The civil surgeon paid no visit. A compounder and cooly wasted Rs. 12 per mensem. The dispensary may be closed.

## Chittagong Division.

**Tipperah district.**

The report is very defective as to details. The civil surgeon notes some improvement in the general health of the district, and the report is forwarded without comment by the civil officers.

*Commillah.*—The dispensary was given in charge to the municipality in April. A sub-committee met monthly. The Daodkandy branch having no funds was closed in 1880. The civil surgeon considers the dispensary to have been almost a failure, in consequence of its distance from the native town. The attendance returned was 70 house and 1,518 out-patients in 1880 against 101 and 1,577 in 1879, with daily attendance of 3 and 10 against 4 and 11. The report is wanting in particulars. The establishment which should consist at the outside of a native doctor on Rs 30 and a servant and a cook each on Rs. 4 per mensem, now costs Rs. 92, and consists of—

| | Rs. |
|---|---|
| 1 Civil hospital assistant ... ... ... ... | 50 |
| 1 Compounder ... ... ... ... ... | 18 |
| 1 Hospital servant .. ... ... ... ... | 6 |
| 1 Cook ... ... ... ... ... | 6 |
| 1 Mehter ... ... ... ... ... | 6 |
| 1 Peon for collecting subscriptions ... ... ... | 6 |

*Brahmunbereah.*—The dispensary was burnt and rebuilt during the year. The returns show 19 house and 727 out-patients against 16 and 809 in 1879, with averages of 1 and 14 against 0·7 and 20. A compounder was paid Rs. 15 per mensem, which is wasteful.

*Chandpore*, a sub-divisional dispensary, opened in 1879, inconveniently placed, which required to be repaired in the first year of its existence at a cost of Rs. 132. The civil surgeon inspected once. The report gives no particulars of work. The returns show 772 out-patients in 1880 against 342 in 1879. A superfluous compounder has been lately dismissed. The daily attendance was 7 against 6. The dispensary is useless.

*Ramchunderpore.*—A first-class dispensary opened in 1879 by Nawab Ahsanoolla of Dacca, whose agent presides over its affairs. The returns show 831 out-patients in 1880 against 954 in 1879. The civil surgeon inspected once. A compounder was maintained. The Nawab's benevolence, I fear, is thrown away, so far as the people are concerned.

*Jaffergunge.*—A first class dispensary opened in 1879 by Rajah Harendro Krishna. The returns show 786 out-patients against 674 in 1879, with daily attendance of 7 against 8. The dispensary is useless to the people.

*Doolye.*—This dispensary is supported by Nawab Ahsanoolla. The civil surgeon expresses much dissatisfaction with the persons nominated to the charge of the dispensary. There were 750 out-patients returned against 450 in 1879. The work is nominal. A superfluous compounder is maintained.

**Noakholly district.**

No information is given as to the general health of the district. The affairs of the two dispensaries are not separately stated in the report, which is confused by the irrelevant matter it contains.

*Noakholly.*—This dispensary has been made over to the municipality. It was visited daily by the civil medical officer, frequently by the Magistrate, and once by the Commissioner. There were 144 in-door and 3,163 out-door patients, against 104 and 3,499 in 1879 with daily averages of 6 and 18 against 4 and 20. The establishment is large and expensive for the little work done. The compounder and one of the cooks were in excess of requirements.

*Dalal Bazar.*—The civil surgeon paid three visits to this place. There were 1,461 out-patients, against 1,542 in 1879 with daily attendance of 10 against 11. A compounder and dresser were maintained, whose pay should be used to make the institution independent of Government aid, if it be resolved to maintain a dispensary which is useless to the people.

**Chittagong district.**

The only dispensary in this district is at the central station.

*Chittagong.*—The municipality has control of the dispensary. The general health of the place is said to have been good. The civil surgeon visited daily and the Sanitary Commissioner once. There were 274 house and 6,481 out-patients, against 278 and 6,469 in 1879. The averages were 11 and 36 against 11 and 32. There is a large establishment, consisting of ten persons and costing Rs. 80 per mensem. Considerable reduction is required. An interpreter is paid Rs. 15 since Europeans are occasionally received. An English-speaking compounder is sufficient, who should also be the dresser. One cook and one sweeper will amply suffice.

### Patna Division.

The reports of this division are accompanied by a letter from the Commissioner, which contains some important remarks of general application to his division. The public health in 1880 he says was unusually good. There were no epidemics. There were 37 dispensaries at the close of the year. That of Nasrigunge in Shahabad had been closed. Three of these, Mr. Halliday notes—viz. Bankipore, Gya, and Somastipore—are special institutions, entirely supported by Government, the last-named being a railway hospital. This requires modification. Both at Bankipore and Gya there are receipts from local funds, invested money, and subscriptions. The Maharajahs of Durbhunga, Hutwa, and Doomraon, and the Maharani of Tikari, are said to support seven dispensaries, particulars of which will follow. Some of the institutions in the division show decreasing popularity, which is ascribed to "want of confidence in the medical officers in charge," against three of whom special complaint is made. Two of these men were reported in three quarters of the year to be good, both in conduct and qualification, and in the other quarter no opinion was expressed. The third was said to be good in conduct, but poorly qualified. I have already noticed the misleading character of the quarterly statements in general, but those furnished from Mozufferpore in 1880 must be excepted in drawing, from the Patna division, examples of the embarrassment which follows unconsidered words. The Commissioner notices the admitted fact that Bengalee native doctors do not succeed in Behar. Last year nearly all the vacancies in the list were filled from the Patna School. They were not many, nor was it possible to remove incumbents from Behar dispensaries on the sole ground of their being Bengalees. In time substitution of Beharees will be made as opportunities arise, and I hope that this well-founded complaint will cease.

**Patna district.**

*Temple School Hospital.*—The buildings here were improved and repaired in 1880. Dead-house, servants' quarters and latrines were added; drainage was improved; and the compound was raised and levelled. There were 1,012 in-door and 14,548 out-door patients against 944 and 13,358 in 1879. The daily averages were 54 and 117 against 52 and 110. There were 110 deaths, or 10·8 per cent., against 13·7 in 1879. Cholera and fever were less fatal. There were 70 major operations—36 were for cataract and 10 for calculus. The committee met formally only once. The hospital is not classified. The municipality paid Rs. 1,800 in 1880.

*Patna City.*—The dispensary is expected to become municipal shortly. There were 381 house and 15,403 out patients against 385 and 13,892 in 1879. The daily numbers were 25 and 201, against 27 and 185 in 1879. Of the house-patients 84 were police cases. There were 77 deaths, the majority of those who died are said to have been moribund on admission. The death-rate was 20 per cent. against 28·8 in 1879. There were 73 major operations, 23 of which were for abscess. The establishment is excessive.

*Barh.*—The committee met three times in 1880. The civil surgeon inspected once. There were 158 in-door and 4,176 out-door patients, against 132 and 4,779 in 1879. The daily numbers were 5 and 14 against 5 and 52. Numbers of out-patients are falling here year by year. In 1878 there were 72 persons in daily attendance. The death-rate was 8·8 per cent. against 15 in 1879. There were 19 major operations returned. The Government paid Rs. 720 towards the expenses of the year. A superfluous dresser is maintained.

*Behar.*—The dispensary is distant from the town. Its removal has been proposed. There were 113 in-door and 4,192 out-door patients, against 172 and 4,597 in 1879. The averages were 7 and 51 against 9 and 56. Numbers have been falling steadily. The assistant surgeon in 1880 complains of scarcity of English medicines. The civil surgeon thinks the waning popularity of the dispensary has other causes. There were 42 major operations returned. The committee met five times and the civil surgeon inspected once. The Government paid Rs. 1,126 out of a total expenditure of Rs. 2,676. Some revision seems wanted here. The scale of establishment is too high for the work, and the cost to the Government much too large. The municipality is in charge of the dispensary.

*Dinapore.*—This dispensary was not regarded as under the civil surgeon of the district in former years. Its history was traced in 1880; and as there seemed no reason for excluding it, the civil surgeon was requested to inspect it. Dr. Bird now reports upon it. There were 279 in-patients and 6,084 out-patients, against 360 and 4,869 in 1879. The averages were 9 and 57 against 17 and 48. There were 31 deaths, or 11 per cent., against 8 in 1879. There were 11 major operations. The committee met twice, and the civil surgeon inspected once. The dispensary cost the Government Rs 630. There is no reason why this payment should exceed Rs. 300, the half salary of the hospital assistant. The cash balance is large. A dresser is not required in addition to a compounder.

**Gya district.**

The report on this district gives particulars of the public health, which show improvement under all heads.

*Gya Pilgrim Hospital.*—This is a special dispensary not brought under the rules. As the sources of income do not differ from those of other dispensaries there seems no reason against the classification of it. The committee did not meet in 1880. The Commissioner of the Division, the Sanitary Commissioner, and the Inspector-General of Jails each paid a visit. The Magistrate paid several and the civil surgeon daily visits. There were 335 house and 4,606 out-patients, against 353 and 3,809 in 1879. The averages were 11 and 61 against 12 and 45. The death-rate was 25 per cent. against 37 in 1879. Many hopeless and moribund people were received. There were 64 major operations. Lithotomy is more common in Behar than in Bengal Proper, as would be expected; there were 19 cases at Gya in 1880, all successful. The municipality lately assumed the management of the dispensary. The Government paid Rs. 2,024 towards a total expenditure of Rs. 3,113, and it is understood that a further grant of Rs. 200 for medicines is sanctioned. This may be withdrawn. The income exceeded the expenditure by Rs. 479 without this grant. The proportion of Government payment may be further considered with advantage. As a place of pilgrim resort, Gya has perhaps claims on the State higher than those of Burdwan and Midnapore, which are places of pilgrim transit merely; but the town benefits by pilgrims, and Rs. 600 from municipal funds, with Rs 333 from native subscriptions, do not make up a fair contribution from the town. Two compounders and a dresser are not all required.

*Nowada.*—The committee met six times in 1880 and the civil surgeon inspected four times. There were 68 in-door and 1,073 out-door patients against 59 and 1,160 in 1879. The averages were 1·8 and 12 against 2 and 13. The civil surgeon observes that the people do not appreciate the dispensary, and the figures prove this. The Government pays Rs. 120 as for a sub-divisional dispensary. This is quite unnecessary. Income exceeds expenditure by more than this amount, and the large cash balance is useless. The subscribing classes appreciate the dispensary, as is seen in the native subscriptions which exceed those of the city of Gya to its pilgrim hospital. They may reasonably be required to pay the whole cost in future if the dispensary be maintained. The dresser, cook, and cooly are not wanted, and their wages alone will cover the Government payment.

*Jehanabad.*—The committee met eight times, and the civil surgeon paid three visits in 1880. There were 59 in-door and 1,636 out-door patients against 37 and 1,640 in 1879. The averages were the same as in 1879. The civil surgeon considers this to be the most useful of his outlying dispensaries, which however he adds, "is not high praise." The figures make indeed a poor maximum. The establishment is wasteful. A clerk was paid Rs. 5 per mensem which was quite inadmissible. He has been lately discharged. The compounder, cooly, and chuprassie, are superfluous. Their joint wages exceed the Government contribution which might be withdrawn. If the committee contend that the compounder is wanted for sub-divisional reasons, they should pay him Rs. 6, and make him collect subscriptions. They would still save enough to cover the present payment by Government.

*Aurungabad.*—The committee here met once, and the civil surgeon paid four visits in 1880. There were 1,133 out-patients against 1,071 in 1879. The average was 21 against 18 in 1879. The dispensary is useless to the people. It has a cash balance of Rs. 472, but income does not exceed expenditure, and establishment can only be reduced by one rupee, which is needlessly paid to a peon.

*Tikaree.*—This dispensary has been made independent of Government aid by additional endowments from the Maharani. There was no committee. The civil surgeon inspected five times in 1880. There were 1,316 out-patients against 985 in 1879, and an average of 19 against 13. An assistant surgeon has lately been appointed to the place.

Shahabad district.

The report from this district gives a full account of the general health, which was good, that of the town of Arrah remarkably so, the registered deaths being 14,043 only against 32,000 in 1879. All the prevailing diseases showed improvement.

*Arrah.*—The municipality has taken charge of this dispensary, which was subjected to frequent change of medical officers in 1880. There were 276 in-door and 9,006 out-door patients against 250 and 10,427 in 1879, the difference being ascribed to general health, to changes of medical officers, and to reduction of police cases. The averages were 11 and 103 against 11 and 95. Particulars of finance and establishment are wanting in the civil surgeon's report.

*Buxar.*—The committee here met four times, and the civil surgeon visited three times. There were 120 in-door and 5,267 out-door patients against 124 and 5,652 in 1879. The averages were 6 and 65 against 4 and 57. The proportion paid by Government to the total expenditure is large and calls for revision.

*Domraon.*—The dispensary is said to be supported by the Maharajah. Government pays however Rs. 720 as salary. The committee met three times. The civil surgeon visited twice in 1880. There were 75 in-door and 7,185 out door patients against 104 and 7,445 in 1879. The averages were 3 and 93 against 4 and 106.

*Jugdispore.*—There is no committee. The civil surgeon paid three visits. The expenses are divided between Government and Messrs. Burrows, Thomson, and Mylne, proprietors of the Jugdespore estate, whose manager checks dispensary accounts. Government paid Rs. 483 and the proprietors Rs. 658 in 1880. There were 165 in-door and 6,192 out-door patients against 155 and 6,430 in 1879. The averages were 3 and 31 against 3 and 33.

*Sasseram.*—The municipality has taken charge of the dispensary. The building is in a ruinous state and a new one is proposed. The civil surgeon inspected twice in 1880.

There were 127 in-door and 5,331 out-door patients against 108 and 4,261. The averages were 7 and 79 against 6 and 57. The total expenditure was Rs. 2,348, whereof Government paid Rs. 728.

*Bhubbooah.*—The committee met twice and the civil surgeon inspected twice. There were 46 in-door and 2,518 out-door patients against 71 and 2,222 in 1879. The averages were 1·6 and 20 against 3 and 21. The total outlay was Rs. 505, to which Government contributed Rs. 120. Subscriptions were in arrears, and the municipality had not taken charge of the dispensary, which is of very little use to the people.

*Dehree.*—This dispensary was established for the service of the Irrigation Department, and is maintained by Government. The people of the country are said to resort to it more largely than they did. The civil surgeon paid three visits. There were 45 in-door and 2,167 out-door patients in 1880 against 224 and 1,516 in 1879. The decrease in the first figure is probably due to the removal of the training school from Dehree. The averages were 1 and 14 against 4 and 9. The dispensary affords no work for an assistant surgeon, but he is understood to have other duties in the Irrigation Department. The expenditure was very large in proportion to the work, the salary of the assistant surgeon being debited.

**Durbhunga district**

The public health is stated to have been unusually good in and around the station. The *Durbhunga Raj* hospital report is generally wanting in detail. This fine institution is now entirely supported by the Maharajah, and its financial affairs controlled by the managers of the estate. Its popularity appears to increase. There were 334 in-door and 12,132 out-door patients in 1880 against 336 and 8,518 in 1879. The averages were 23 and 77 against 18 and 51, notwithstanding improved public health. The establishment is very large. There were 37 major operations during the year.

*Mudhobunny.*—The dispensary is under municipal control. The civil surgeon inspected once. No particulars are given in the report. The returns show 177 in-patients and 5,951 out-patients, against 257 and 3,012 in 1879, the averages being 12 and 43 against 13 and 21. The civil surgeon considers the dispensary to be useful and popular. Government paid half the salary of the assistant surgeon. Compounder and dresser are not both required.

*Tajpore.*—The committee met eight times and the civil surgeon paid two visits. There were 4,770 out-patients in 1880 against 4,112 in 1879. The average was 32 against 28. The in-door ward is useless and should be closed. The subscriptions are more than sufficient to meet all expenses, and the surplus will be increased if unnecessary servants be discharged. Government aid may be withdrawn and the dispensary be made independent.

*Roserah.*—A new building is in course of construction. The municipality has taken charge of the dispensary. The report is wanting in details. The returns give 2,538 out-patients in 1880 against 2,795 in 1879. The average was 30 against 17. The expenditure on English medicine was enormous. An assistant surgeon is maintained, but the place affords no work for him.

*Naraya.*—A new building is nearly finished. The dispensary is entirely supported by the Maharajah of Durbhunga. The civil surgeon inspected once. The returns show 3,000 out-door patients against 2,934 in 1879. The total expenditure in 1880 was Rs. 794. A compounder is not wanted here.

**Mozufferpore district.**

The report from this district is meagre and insufficient, consisting only of general remarks without notice of particular facts, necessitating the production here of bare figures from the return.

*Mozufferpore.*—This dispensary is under the municipality, who are said to treat it liberally and to make it useful and popular, but it is also said that the in-door department does not work well, having no proper accommodation. The returns show 190 house and 8,966 out-patients against 182 and 11,890 in 1879, the averages being 15 and 71 against 16 and 50. Cases of goitre are less numerous than they were. There were 76 capital operations, but nothing more is said about them in the report. The civil surgeon says the year was a healthy one comparatively. The Magistrate thinks fever was much more severe than usual. There was total outlay of Rs. 4,009, whereof Government paid Rs. 1,031. The establishment was very extravagant.

*Seetamurhee.*—The committee met but seldom here, and the civil surgeon inspected twice. The management is virtually in the hands of the Sub-divisional Officer. There is an assistant surgeon in charge of this small dispensary, to whose apathy its uselessness has been ascribed. He is now said to have improved in some degree. Still Seetamurhee affords no work for an assistant surgeon. The returns show 119 house and 3,500 out-patients in 1880 against 114 and 2,720 in 1879, with averages of 4 and 15 against 3 and 12. The dispensary might have been at the outside a sub-divisional dispensary, and have cost the Government Rs. 120 annually. There are, however, ample funds for the maintenance of an independent dispensary, if it be worth while to maintain one at all.

*Hajipore.*—The dispensary is in charge of the municipality. It was twice inspected by the civil surgeon, who thinks it is but lightly esteemed by the people. It is said to have no in-door accommodation, but 161 house-patients were returned in 1879. The average, however, was returned as 0·44, so the figures could not be true. The returns for 1880 show 115 house and 4,038 out-patients against 161 and 6,304, the averages being 4 and 31 against 0·44 and 17—that is to say, the total number of persons in 1879 exceeded the total number of attendances. There was outlay of Rs. 1,204 in 1880, and Government paid Rs. 384.

*Soorsund.*—This dispensary is useless. It does not improve, and the people are said to esteem it lightly. There were 1,232 out-patients returned in 1880 against 1,327 in 1879, the average being 13 against 17. There is accumulation of useless money, and the dispensary, if it be maintained, it should be made independent of Government aid. The civil surgeon inspected twice in 1880.

**Sarun district.**

The public health of the district is not noticed in the report.

*Chuprah.*—This dispensary has recently passed into the hands of the municipality. It was visited daily by the civil surgeon in 1880. There were 277 house and 9,011 out-patients against 294 and 8,314 in 1879, the averages being 16 and 83 against 17 and 72. The total outlay amounted to Rs. 3,885, whereof Government paid Rs. 796. No information is given about the deaths in hospital which are shown in the returns, nor about the establishment. There were 48 major operations.

*Sewan.*—The municipality took charge in 1880. The civil surgeon paid two visits. There were 106 house and 4,843 out-patients against 123 and 4,704 in 1879, the averages being 3 and 40 against 4 and 43. There was total outlay of Rs. 2,369, to which Government contributed Rs. 728.

*Revelgunge.*—A new and commodious building has been erected. The municipality manages the dispensary. The civil surgeon visited it twice in 1880. There were 2,628 out-patients against 2,288 in 1879, the average being 41 against 34. There was outlay of Rs. 6,900 in 1880, including Rs. 367 invested, and Government paid Rs. 348. There was a large cash balance of Rs. 2,285 at the end of the year.

*Hutwa.*—This is now a first class dispensary entirely supported by the Maharajah, who manages it. The civil surgeon inspected it twice. There were 119 house and 9,325 out-patients in 1880 against 157 and 9,792 in 1879, the averages being 9 and 63 against 10 and 60. There were 12 major operations, not detailed.

*Gopalgunge.*—This also is entirely supported by the Maharajah of Hutwa. It was inspected twice by the civil surgeon. There were 9,149 out-patients in 1880 against 8,838 in 1879, the average being 43 against 59 in 1879.

*Bhori.*—Entirely supported by the Maharajah, and twice inspected in 1880 by the civil surgeon. There were 4,224 out-patients against 4,210 in 1879, the average being 37 against 40.

The present civil surgeon observes that he has had no means of checking any of the annual returns except those of the Chupra dispensary. The inspections were made by the late civil surgeon. Monthly returns will be used in future.

**Chumparun district.**

The Magistrate, forwarding the report from this district, states that having joined the district only in December, he is unable to offer any useful remarks on the working of its dispensaries, and refrains from commenting on the "somewhat eccentric style" of the report, and its "remarkable views and statements regarding subscriptions." The report of the late civil surgeon is indeed most unsatisfactory. There is not a single dispensary in the district whose working can be traced in it. Its pages are mainly occupied by vehement denunciations of the parsimony of wealthy natives, and other complaints of unavoidable evils.

*Motihari.*—The dispensary has been placed under the municipality. Subscriptions were largely in arrears. The civil surgeon gives no figures, but mentions a great increase of attendance, of which, he says, one chief cause was the practice of issuing a week's supply of medicines which drew people from long distances Again it is said that fever was very prevalent in the district and the people were beginning to believe in cinchona febrifuge. There were 31 major operations. The returns show 159 house and 15,736 out-patients against 161 and 7,997 in 1879, with averages of 7 and 42 against 7 and 36. The figures of 1880 condemn themselves. There was a total outlay of Rs. 2,160, to which Government contributed Rs. 811.

*Bettiah.*—The old building fell to the ground during the year. Temporary sheds are now used. A new building will shortly be erected, the natives of Bettiah having subscribed Rs. 1,268 for this sole purpose. This announcement is followed in the report by some very strong condemnation of native "niggardliness" in Bettiah. The municipality has taken charge of the dispensary. The returns show 266 house and 5,798 out-patients in 1880 against 286 and 8,828 in 1879, with average of 9 and 45 against 11 and 59. The fall is ascribed to reduction of goitre, the remedy for which is said to be now sold very cheaply by pedlars in the district. The entire outlay was Rs. 2,618, and the Government contributed Rs. 738.

*Bagaha.*—The returns here show 90 house and 3,815 out-patients in 1880 against 69 and 3,139 in 1879, with averages of 4 and 39 against 5 and 27. There was total outlay of Rs. 998, and Government contributed Rs. 186.

*Burhurwa.*—A new dispensary is required and has been projected. There were 3,740 out-patients in 1880 against 3,774 in 1879, the daily number being 27 against 29. The monthly subscription averages Rs. 72, which will provide more than such a dispensary requires, without the aid of Government.

The Maharajah of Bettia guarantees all the dispensaries in this district. It is reasonable to ask whether this gentleman's liberality, in taking the burthen of the dispensaries on himself, may not be as potent a cause of scanty subscriptions in Bettiah, as the parsimony to which they are ascribed in the report.

BHAGULPORE DIVISION.

**Monghyr district.**

In the civil surgeon's report it is said that the public health of the district was good in 1880. The report is brief and incomplete. This is ascribed to the early date of its submission, which is not a satisfactory reason. The Commissioner appends marginal notes.

*Monghyr.*—The municipality has taken charge of the dispensary, but it appears that the charge on municipal funds, amounting to Rs. 865, was less than their former contribution, viz. Rs. 1,200 per annum, and this notwithstanding that all voluntary subscriptions are said to have been withdrawn. There were treated 537 in-door and 10,834 out-door patients in 1880 against 473 and 8,681 in 1879. The daily numbers were 37 and 90 against 34 and 63. The civil surgeon makes no remark concerning deaths, operative surgery, or establishment. The total expenditure was Rs. 6,193, including Rs. 350 invested, and Government paid Rs. 1,202.

*Khurruckpore.*—This dispensary is supported by the Maharajah of Durbhunga mainly in the interests of his estate. There were 114 in-door and 2,340 out-door patients in 1880, against 100 and 1,704, the daily numbers being 4 and 19 against 3 and 17.

*Begoserai.*—The returns were late from this dispensary on which the Commissioner comments with just severity. Mr Barlow reports the affairs of the dispensary to be in a critical state. He observes that an assistant surgeon was required by no one but the planters, who would not pay for him. The dispensary has recently been closed. The returns now received show 77 house and 3,049 out-patients against 98 and 3,103 in 1879, with averages of 3 and 24 against 3 and 28. Subscriptions had fallen steadily.

*Jamooee.*—There was some financial confusion here. A single fund is devoted to school and dispensary. The Commissioner and Magistrate have taken the matter in hand. The hospital assistant was unfavourably mentioned, and having been found wanting on further trial, will be removed. The civil surgeon inspected five times in 1880. There were 57 in-door and 1,700 out-door patients, against 86 and 1,662 in 1880, the averages being 2 and 15 against 3 and 12. The dispensary is useles. though the place has been populous. A better doctor may work improvement. The income from invested funds alone exceeded the total expenditure, and funds accumulate uselessly. The dispensary may be placed in the first class.

**Bhagulpore district.**

The general health of the district is said to have been exceptionally good. The civil surgeon's report is concise, clear, and fairly complete in the information it affords.

*Bhagulpore.*—The civil surgeon visited the station dispensary frequently in 1880. There were 272 house and 3,492 out-patients against 359 and 3,727, the averages being 10 and 38 against 16 and 39. The figures are small, and the management was unfavourably noticed by the civil surgeon. There were 50 deaths, or 18 per cent., against 31 per cent. in 1879. The differences are ascribed to general health. There were 25 major operations, of which 11 were for calculus, of the latter two cases died. The income largely exceeded the expenditure, though some unnecessary servants were paid. The status of the dispensary is under consideration of Government.

*Nauthnuggur.*—A small out-door dispensary, twice visited by the civil surgeon in 1880. There were returned 2,618 out-patients against 3,085 in 1879, the average being 27 against 30. The expenditure was met chiefly by the municipality. The Government paid Rs. 240.

*Banka.*—Dispensary was inspected by the civil surgeon. There were 58 in-door and 1,014 out-door patients in 1880 against 55 and 1,072 in 1879, the averages being 1 and 10 against 1 and 11 in 1879. The dispensary is useless to the people It may be closed, but if it be maintained it should be as a sub-divisional dispensary only, for which its own funds will more than suffice.

*Colgong.*—The civil surgeon inspected twice. There were 2,836 out-patients returned in 1880 against 2,318 in 1879, the average being 26 against 20. The in-door ward was closed for want of funds. These are difficult to obtain, and the Magistrate anticipates closure of the dispensary.

*Sonbursa.*—The civil surgeon inspected once. There were 14 house, and 1,018 out-patients in 1880, against 7 and 826 in 1879, the averages being 1 and 17 against 0·2 and 15. The Government has hitherto paid Rs. 180 annually to the native doctor. The Rajah, who is the sole subscriber, proposes to close the dispensary as a public institution and maintain it privately, a change to be recommended for every reason. At present money accumulates and is useless.

*Muddehpora.*—The civil surgeon inspected once. There were 143 house and 2,714 out-patients in 1880, against 62 and 962 in 1879, the averages being 5 and 26 against 2 and 10. The Magistrate considers this to be a flourishing dispensary. Accumulation of useless money, however, cannot alone make a flourishing dispensary. Cash balance in 1880 increased by a large sum, much larger than was wanted for the sick, Government paying Rs. 720 to an assistant surgeon. Government aid will be withdrawn in June, from which the Magistrate anticipates collapse. It must be observed that hitherto the Government contribution has only gone to swell the already large cash balance.

*Soopole* was visited once by the civil surgeon. Attendance here falls steadily, which the hospital assistant says is due to the number of goitres he has cured. He said the same last year. There were 65 in-patients and 1,006 out-patients in 1880, there were 55 and 1,332 in 1879, and 62 and 1,554 in 1878. The averages were 3 and 4 in 1880,

with 3 and 7 in 1879. The dispensary should be closed. The subscription, however, affords much more than enough to maintain it, if it be maintained. Government aid is not wanted. It is a sub-divisional dispensary.

*Protabgunge* was visited once in 1880. There were 2,170 out-patients returned against 1,580 in 1879, the average being 28 against 25. The dispensary is supported in the first class by Rai Dhunput Singh, Bahadoor, without aid from Government.

*Toolsia.*—No particulars are given of this dispensary, which was closed in 1880.

**Purneah district.**

Fever is said to have been very prevalent and severe in this district during the year. The report is not clear on many points.

*Purneah.*—The municipality has charge of the dispensary, but contributes only Rs. 10 monthly to its funds. It was visited by the Commissioner, Judge, and Magistrate. The returns show 170 in-door and 2,500 out-door patients in 1880, against 143 and 2,173 in 1879, the averages being 6 and 21 against 7 and 18. Nothing is said of the death-rate by the civil surgeon. There were 17 major operations. There is a large sum of invested money, and the floating balance in 1880 is a matter which, taken with the small amount paid by the municipality, shows that Government aid should be withdrawn. The town does very little for its sick poor.

*Kissengunge.*—A sub-divisional dispensary controlled by the Sub-divisional Officer. There were 28 in-door and 1,201 out-door patients in 1880, against 59 and 956 in 1879, the averages being 0·9 and 16, against 2 and 12. The work is insignificant, and if the dispensary be maintained, Government aid may be withdrawn, for the savings in 1880 greatly exceeded the Government payment.

*Bussuntpore.*—Here the committee met six times in 1880. The returns show 29 in-door and 1,299 out-door patients against 84 and 1,728 in 1879, the averages being 1 and 7 against 3 and 10. The dispensary is useless to the people. Government aid may be withdrawn, as the income of 1880 exceeded the outlay by more than the amount of it.

**Maldah district**

The civil surgeon's report is vague and incomplete. The author contents himself with referring for all facts to the returns drawn up by hospital assistants, instead of reviewing and criticising them. The comparative health of the year is not mentioned.

*English Bazar Dispensary.*—The committee met eleven times. The returns show 128 house and 5,800 out-patients in 1880, against 166 and 6,229 in 1879, the averages being 5 and 44 against 5 and 48. The attendance is very small for such a place. The civil surgeon says nothing of deaths, and simply mentions "two surgical cases of importance." The establishment is too large. The dresser and cooly are not wanted. The municipal grant of Rs. 300 was doubled to meet the cost of medicines, but wealthy residents did not respond to the call for increased subscriptions.

*Maldah Town.*—The committee here met nine times in 1880, and the civil medical officer paid six visits. There were 3,173 out-patients returned against 3,233, the average being 18 against 20. A compounder is needlessly kept here. Municipal payments and subscriptions were increased to pay for medicines. The Government grant is not necessary. The dispensary is of little or no use to the people.

*Chanchal.*—It is said that the "manager of the estate represents the committee and manages everything here." As the dispensary is not in the first class, this requires explanation. The civil medical officer visited three times. The returns show 1,980 out patients in 1880 against 1,824 in 1879, the average being 16 against 16. The nominal in-door practice ceased in 1880. Some reduction of establishment was effected, but the pay of the native doctor is too high for the trifling work. There is an useless compounder and a servant kept here.

**Sonthal Pergunnahs.**

The report on the dispensaries of this district is fairly complete. It is stated that the health of the district was generally good, but nothing comparative is given.

*Doomka.*—The committee met six times. The Sanitary Commissioner paid one visit. The civil officers are said to interest themselves much in the dispensary. The civil surgeon attended almost daily. There were 130 house and 2,048 out-patients against 93 and 1,916 in 1879, the averages being 5 and 18 against 2 and 15. The attendance is very small, subscriptions decrease, and arrears are large.

*Deoghur.*—The municipality has assumed the management of this dispensary. The Commissioner and Sanitary Commissioner inspected the place, and the civil surgeon paid three visits. There were 159 in-door and 2,228 out-door patients in 1880, against 181 and 2,220 in 1879, the averages being 4 and 14 against 3 and 18. There is an assistant surgeon here for whom the dispensary affords no work, and the Government pays his salary. This calls for revision. The dispensary is of very little use to the people.

*Rajmehal.*—The committee met seven times in 1880. The civil surgeon inspected three times. There were 86 in-door and 1,172 out-door patients, against 118 and 1,136 in 1879, the averages being 4 and 10 against 4 and 12. For this trifling work an assistant surgeon drew his pay from Government. The dispensary has lately been placed on a proper footing. It has nominal usefulness.

*Godda.*—A sub-divisional dispensary, managed by the Sub-divisional Officer without a committee. It was inspected by the Commissioner, and twice by the Deputy Commissioner, and civil surgeon. There were 39 in-door and 1,006 out-door patients in 1880, against 42 and 1,015 in 1879, the averages being 1 and 12 against 1 and 14. The work is nominal. The in-door ward should be closed if the dispensary be maintained. There is a large cash balance and Government aid may be advantageously withdrawn.

*Jamtara.*—A sub-divisional dispensary. There is no formal committee, but the promoters of the dispensary meet. The civil surgeon paid three visits. There were 839 out-patients in 1880 against 662 in 1879, with an average of 5 against 5. If the nominal dispensary be maintained, Government aid may be withdrawn, for the local income exceeded the expenditure by more than the amount paid by Government.

## Orissa Division.

**Cuttack district.**

The civil surgeon's report is brief and wanting in critical notice of the work of his subordinates. Nothing is said of the public health of the district.

*Cuttack General Hospital* is also a school hospital. Its expenses are paid by Government and the Unnochutter Fund There were 631 in-door and5, 138 out-door patients in 1880 against 580 and 3,476 in 1879. The averages were 39 and 33 against 38 and 24. The civil surgeon says nothing of the death-rate. There were 51 major operations, some of them being severe, but there were only three deaths in the whole number.

*Cuttack Town Dispensary* is an out-door institution, supported chiefly by the municipality, Government paying half salary of the hospital assistant. There were 10,901 out-patients in 1880 against 9,805 in 1879, the average being 151 against 148. Cases requiring in-door treatment are transferred to the General Hospital.

*Jajpore.*—This dispensary is chiefly used by pilgrims. It is mainly supported by the municipality. There were 34 in-door and 2,128 out-door patients in 1880 against 77 and 2,140 in 1879, the averages being 1·1 and 23 against 2·6 and 25. Government pays half the salary of the native doctor, or Rs. 15 per mensem. Nothing is said in the report of the committee on establishment.

*Kendrapara.*—This dispensary is said to be supported by the municipality and private subscriptions. The numbers were 33 house and 1,802 out-patients against 38 and 2,022 in 1879. The averages were 1 and 27 against 0·09 and 5 in 1879. The latter or the totals are impossible quantities.

*Dhurmsala* is a halting place of pilgrims. The dispensary was founded by Rai Boidyanath Bahadur. There were 119 house and 3,582 out-patients in 1880 against 90 and 3,273 in 1879. The averages were 3 and 30 against 2 and 32.

*Dhenkanal* is a first class dispensary. There were 135 in-door and 8,233 out-door patients in 1880, against 90 and 7,939 in 1879. The averages were 5 and 45 against 8 and 45. There were seven major operations.

*Ungool.*—A dispensary in the Government estate of that name, 74 miles from Cuttack, and therefore not inspected in 1880. There were 25 in-door and 1,235 out-door patients against 21 and 466 recorded in 1879. The averages were 2 and 15 against 5 and 13. The in-door ward must have been more of an almshouse than an hospital, and the out-door practice insignificant. The Government appears to pay all the expenses, which are much more than the work is worth.

*Bissepara* is a small remote dispensary, quite inaccessible for the civil surgeon, which exists solely for the police and sub-divisional officers. There were 1,802 out-patients returned in 1880 against 881 in 1879, the average being 6 against 7. The figures must be taken for what they may be worth.

**Balasore district.**

The year is reported to have been unusually healthy throughout the district, every form of sickness being reduced. Pilgrims who formerly travelled by road attended the Balasore dispensaries. These people now travel by river steamers. The Commissioner supports the civil surgeon in ascribing to these two causes the diminished dispensary practice of 1880.

*Balasore Pilgrim Hospital.*—The house will be rebuilt from funds subscribed by three native gentlemen. The civil surgeon visits daily. There were 241 in-door and 1,918 out-door patients in 1880 against 261 and 2,357 in 1879. The averages were 7 and 10 against 7 and 15. There were nine major operations. There was total expenditure of Rs. 2,838. Government paid Rs 835, the rest being obtained from the Unnochutter Fund and subscriptions. Establishment was reduced during the year.

*Balasore Town* or the Shamanund Dè Dispensary. This is an out-door dispensary. There were 2,098 out-patients in 1880 against 2,212 in 1879. The average was 22 against 23. The dispensary is supported by endowment and subscription. The hospital assistant on promotion became entitled to higher pay than before. The supporters have lately agreed to meet the charge.

*Bhuddruck.*—The returns here show 187 house and 2,341 out-patients against 242 and 3,391 in 1879, the averages being 6 and 15 against 7 and 23. There were 13 major operations returned, settings of dislocation and fracture in twelve instances.

**Pooree district.**

This district is reported as less healthy in 1880 than in 1879. The Commissioner noticing a large decrease of dispensary attendance called for an opinion on the subject. The civil surgeon's statement is very clear. The increase of mortality in the district arose chiefly from small-pox, which is not represented in dispensary practice. Fever, which chiefly affects dispensary figures, was less prevalent than before. Though cholera showed some increase in the district, there was less of it than before in the town of Pooree. The civil surgeon's report is very complete in all points.

*Pooree.*—The lodging-house committee manages this dispensary and meets monthly. There were 313 house and 4,165 out-patients in 1880 against 448 and 5,096 in 1879. The averages were 12 and 34 against 14 and 35. The death-rate was 29 per cent., moribund pilgrims being numerous. The total expenditure was Rs. 2,995, of which Government paid Rs. 1,539. The establishment is too large, containing servants not allowed elsewhere. The dresser is not required, and vaccinator and dooly-bearers should not be charged to the dispensary.

*Piplee.*—Here also the lodging-house committee manages the dispensary. There were 119 house and 1,947 out-patients in 1880 against 145 and 2,164 in 1879, the averages being 2 and 18 against 3 and 22. The death-rate was 16 per cent. There was total outlay of Rs. 1,075, to which Government contributed Rs. 330.

*Khoorda.*—There is a local committee here which met once in 1880. The dispensary is almost entirely supported by a local fund. There were 188 house and 2,989 out-patients, against 107 and 3,775 in 1879. The averages were 5 and 20 against 6 and 28. The death-rate was 11 per cent. The total expenditure was Rs. 1,041, and Government contributed Rs. 37.

CHOTA NAGPORE DIVISION.

**Manbhoom district.**

The Magistrate observes that the year was more healthy here than 1879. The civil surgeon notices an epidemic of cholera in the town, but speaks of the general health as good. His report is very complete.

*Purulia.*—The committee met monthly. The Magistrate bears testimony to the active care and supervision of the civil surgeon, who attended daily or oftener. There were 247 in-door and 2,596 out-door patients in 1880 against 262 and 3,065 in 1879. The averages were 11 and 30 against 11 and 26. The death-rate was 13 against 20. Operative surgery increased largely. There were 48 major operations with 2 deaths against 21 in 1879. The civil surgeon performed 36 of them. The hospital assistant was unfit for his post and has since been removed. The total expenditure was Rs. 1,752, towards which Government paid Rs. 432.

*Pandra.*—This dispensary passed in 1880 into class I, the Maharani Hingun Comari taking the cost upon herself. The committee met four times. The civil surgeon inspected twice in 1880, the Commissioner, Deputy Commissioner, and Assistant Commissioner, each once. There were 90 house and 1,067 out-patients against 123 and 925. The averages were 2 and 8 against 3 and 7. The total outlay was Rs. 795. The Government paid Rs. 90 as salary prior to transfer.

*Gorindpore.*—This dispensary was opened on 8th March, having been sanctioned in 1879. It is a sub-divisional dispensary. The committee met only twice in the year. The civil surgeon inspected three times, and the Deputy and Assistant Commissioner three and four times respectively. There were 57 house, and 563 out-patients in nine months. The averages were 1 and 7. The numbers are very small as yet, and the entertainment of a compounder premature. There was total outlay of Rs. 768, the Government paying Rs. 510, whereof Rs. 409 was the cost of a gratuitous supply of medical stores, instruments, &c.

**Hazaribagh district.**

The public health of the district is said to have been remarkably good. All its dispensaries were visited several times by the Deputy Commissioner.

*Hazaribagh.*—The dispensary is under the municipality. It was visited daily by the civil surgeon. There were 189 house and 3,947 out-patients against 323 and 4,644 in 1879, the averages being 6 and 46 against 18 and 49. The reduction is ascribed to public health. It was proved on judicial enquiry that the records of this hospital in 1879 were fictitious. The reduction of numbers therefore means nothing. There were 36 deaths in 1880, half of them from bowel complaints. The death-rate was nearly 19 per cent.; no remark is made upon it in the report. The total outlay was Rs. 1,134, to which Government contributed Rs. 293. Two cooks are not required here, and the mali is questionable. The dispensary does not seem to have been classified.

*Chuttra.*—The civil surgeon visited Chuttra once. There were 21 in-door and 1,991 out-door patients in 1880. The previous numbers were 25 and 2,416 in 1879, and 42 and 3,154 in 1878. The steady fall is ascribed to public health, but not satisfactorily so. The averages were ·75 and 13·5 in 1880 against 0·6 and 19 in 1879. The dispensary was not worth its cost. The in-patient ward was useless, and should be closed. Compounder and cook were not required. The outlay was Rs. 639 and the income Rs. 1,152, including Rs. 100 from Government, which may be withdrawn as it is not expended.

*Burhee.*—The civil surgeon paid two visits here. There were 61 in-door and 701 out-door patients in 1880 against 40 and 810 in 1879, the averages being 2 and 6 against 2 and 10. The dispensary is not a medical charity in any sense of the term. A useless compounder and cook are maintained, and the committee will not reduce establishment. There was total outlay of Rs. 552. The income, viz. Rs. 772, included Rs. 205 from Government, which should be withdrawn.

*Echak.*—This dispensary was useless. It was closed in November pending orders which have since been issued.

**Lohardugga district.**

No information is given as to public health in this district in the report.

*Ranchee.*—The municipality has taken charge of this dispensary. There were 139 house and 2,411 out-patients in 1880 against 177 and 2,018 in 1879, the averages being 6 and 27

against 8 and 24. There were 40 deaths in 1880, or 28·7 per cent., of which there is no explanation, but a list of causes showing dysentery to be the chief. There were no operations of importance. "They were left to the management of the hospital assistant, who is a skilful operator."

*Palamow* (*Daltongunge*).—Here the committee met twice, and the civil surgeon inspected once, the place being 110 miles from Ranchee. There were 99 house and 981 out-patients in 1880 against 64 and 1,047 in 1879. The averages were 5 and 9 against 2 and 9. The attendance is very small. There were 15 deaths, or 15 per cent. An assistant surgeon presides.

**Singbhoom district.**

The comparative health of the district is not noticed in the report on the single dispensary.

*Chyebassa*.—The attendance has been very small here, which is ascribed to the fact that the hospital assistant is much occupied in the jail. The numbers were 70 in-patients and 1,220 out-patients in 1880 against 69 and 1,283 in 1879, the averages being 6 and 13 against 4 and 12. The death-rate was 21 per cent., but half the persons who died were admitted in a moribund state. The constitution of this dispensary has been recently altered.

I have the honour to be,

SIR,

Your most obedient servant,

A. J. PAYNE, M.D.,

*Surgeon-General for Bengal.*

# STATISTICAL TABLES.

## STATEMENT No. I

*Showing the number of Dispensaries in Bengal during the year* 1880.

| 1 | 2 | 3 | 4 | 5 | 6 | 7 |
|---|---|---|---|---|---|---|
| POPULATION OF THE PROVINCE. | Dispensaries. | Number open on 31st December 1879. | Number opened during the year. | Number closed during the year. | Number open on the last day of the year. | REMARKS. |
| 60,484,831 | I Class ... | 21 | ...... | ...... | 33 | Those dispensaries which passed into the 1st class by paying for their own medicines are here included in that class. The differences generally are due to the transfer of several dispensaries from one class to another. There is no column to indicate these in the statement. |
| | II " ... | 13 | ...... | ...... | 2 | |
| | III " grade 1 | 25 | ...... | ...... | 27 | |
| | " " " 2 | 31 | ...... | 2 | 31 | |
| | " " " 3 | 84 | ...... | 6 | 90 | |
| | Under Rule VII ... | 21 | ...... | ...... | 21 | |
| | Not graded ... | 60 | ...... | 1 | 42 | |
| | Total ... | 255 | .... | 9 | 246 | |

The principle upon which the classification of dispensaries in Bengal has hitherto been based will be understood from the following extracts from the Manual of Dispensary Rules (of 1872), of which an abstract is given in the foregoing report.

"*Rule I.*—Dispensaries and small charitable hospitals will be divided into three classes. Class I will include such as are virtually private and independent of Government aid. Government will, however, if the subscribers desire it, provide medical inspection and supervision for such institutions, and give European medicines at cost price, on the following conditions: (1) that the medical officer appointed by the subscribers be a duly qualified practitioner—*i. e.*, licensed or certified to be qualified by a recognized medical college or school and not a dismissed servant of Government; (2) that the returns required by the Medical Department be regularly submitted, Government supplying all forms, registers, &c., free of cost. Any institution accepting these conditions is at liberty to have the services of a Government servant to be medical officer; and if the appointment be approved by the Surgeon-General of Bengal, such officer will retain his rights to leave and pension.

"*Rule II.*—Class II will include dispensaries in wealthy neighbourhoods and such as have large endowments. Government will aid this class by granting medicines and instruments free of cost, as well as the requisite registers and forms. The medical officer of the dispensary may be nominated by the subscribers, subject to the approval of the Surgeon-General of Bengal, and his salary will be paid by the dispensary. If a Government servant, his service will count towards pension, and he will be entitled to leave under the rules of his service.

"*Rule III.*—In class III will be included all such dispensaries or charitable hospitals as need more liberal assistance. To these, in addition to the aid above specified, a portion (ordinarily half) of the salary of the medical officer will be allowed. In order to regulate this salary, dispensaries, &c., aided under class III will be divided into three grades, according to the standard of medical skill and experience which the supporters desire to obtain and are willing to subscribe for:—

"(1)—Class III, grade 1, will include all dispensaries whose guaranteed local income shall amount to not less than Rs. 120. To these an assistant surgeon will be appointed by the Surgeon-General of Bengal, who will draw not less than Rs. 120 per mensem, half of which minimum salary, or Rs. 60 monthly, must be contributed from the dispensary funds.

"(2)—Class III, grade 2, will include all dispensaries whose guaranteed local income shall amount to not less than Rs. 60 and not above Rs. 120 a month. To these a civil hospital assistant will be appointed by the Surgeon-General of Bengal, who will draw not less than Rs. 50 per mensem, half of which minimum, or Rs. 25 monthly, must be contributed by the dispensary funds.

"(3)—Class III, grade 3, will include all dispensaries whose guaranteed local income shall not be less than Rs. 40, and not above Rs. 60 per mensem. To such dispensaries a civil

hospital assistant will be appointed by the Surgeon-General of Bengal, who will draw not less than Rs. 30 per mensem, and half of this minimum, or Rs. 15 monthly, must be contributed by the dispensary funds."

"Before sanctioning the establishment of a dispensary of any grade under class III of these rules, Government will require either a legal guarantee (in the form A annexed) of the minimum subscription of the class of institution proposed, or an undertaking by the local municipality to make good that amount. When a guarantee is given, it should be executed by one or more substantial residents, or by the members of the proposed committee of management. Formal guarantees will not be required from municipalities.

"*Rule VII.*—At all sub-divisions where there is no regular dispensary, where a sum of not less than Rs. 15 can be raised by local subscriptions for providing the necessary establishment and purchasing bazar medicine and other articles, the civil hospital assistant of the sub-division will be required to afford medical aid to all poor people who may apply for relief. Rs. 10 per mensem will be allowed by Government to the civil hospital assistant as remuneration for the extra duties imposed on him."

# MEDICAL & MUNICIPAL DEPT.

## MEDICAL.

CALCUTTA, THE 27TH JUNE 1881.

## RESOLUTION.

READ—

Report on the Charitable Dispensaries under the Government of Bengal for the year 1880.

Read—

Also the report for the year 1879.

DURING the year 1880 the work of revising the system on which these institutions are maintained was steadily pursued. The reports of inspecting officers, and the researches of the Medical Committee, had left no room for doubt that on the one hand the public usefulness of most of the outlying dispensaries, as gauged by the figured statements of work submitted by them, had been greatly exaggerated, and on the other the assistance afforded by Government had been given on such a principle as to invite careless management, and a diversion of the public money from the charitable objects for which it was intended. Systematic enquiries were therefore made to ascertain what was the actual amount of charitable relief afforded by each dispensary, what was its financial position apart from the Government aid, how far its resources were properly and economically employed, and what hope there was that local charity would maintain the dispensary efficiently with the aid which Government has undertaken to grant. The general result is thus stated by the Surgeon-General:—"It has been found that in some places there has been accumulation of invested money, while the poor have been unrelieved; that in others promised subscriptions have remained unpaid, and while Government has continued to support the medical officer, he has been rendering no public service worthy of mention; that subscribed funds have been devoted to the payment of servants who have been useless for any legitimate purpose, serving mainly to enable the native doctor to absent himself from his dispensary without causing complaints; that apart from irregular fictitious entries, the attendance of patients has been multiplied designedly and on regular system, in order to present a plausible tale of work; that medicines have been issued confessedly to persons who had no right to them." In order to ensure some sort of supervision and some tangible responsibility for contributions, the dispensaries have, wherever this was possible, been transferred to the management of municipalities. The supply of medicines from the Government stores on free indent has been absolutely stopped. Medicines have been given, as in other provinces, at cost price, and in some cases a money grant has been made in support of the dispensary funds. It has been distinctly laid down that Government aid can only be continued if it is shown that proper economy is exercised in the administration of the charitable funds of the dispensary. Enquiry has shown that great extravagance has been exercised in some dispensaries in the maintenance of establishment Where the legitimate work of the dispensary was only sufficient to give employment to the Hospital Assistant and one menial, compounders and other servants were employed. The object of this was clear enough. The compounder looked after the dispensary, while the Hospital Assistant attended the richer subscribers at their homes, or sought private practice elsewhere It appeared to the Lieutenant-Governor that there could be no justification for applying the public revenues to the support of a charity, so long as the funds which they aided were diverted to other than charitable objects. It has accordingly been laid down that Government will only continue to pay a portion of the salary of the medical officer, and to contribute to the support of the dispensary, where the Managing Committee agrees to apply its funds to the *bonâ fide* charitable objects which alone Government has consented to assist.

2. The circumstances which these enquiries have brought to light show very clearly that the number of aided dispensaries in Bengal has far exceeded anything that Government had in view when it first consented to contribute

to them, and that the convenience of the well-to-do, rather than the medical relief of the poor, has been promoted under a system which, in its origin, was intended to be purely charitable. In 1849 the Government of Bengal proposed to assist Baboos Joykissen and Rajkissen Mookerjee, zemindars of Ooterpara, in establishing a hospital and dispensary at that place. The proposal was that Government should pay half the cost of erecting the necessary buildings, and allow Rs. 100 a month for the maintenance of the institution, together with English medicines and instruments. In reviewing this proposal, the Government of India declared that, "as far as any general principle is concerned, it is certainly opposed to grants of the kind, inasmuch as it is beyond the recognized province of a Government to provide medical aid for the great body of its subjects." The letter went on to say that, though the British Government in India has for special reasons granted assistance of this nature to the people, that assistance had till then, with one exception, "been exclusively confined to towns at or in the neighbourhood of which a Government medical officer is stationed." "There are obvious objections to extending the privilege much further. As long as it is so restricted, there is a distinct line drawn, and the Government are able to discern the extreme extent to which it is possible that the State may be taxed for the purpose. This would of course cease to be the case if the privilege were once extended indiscriminately to every large town or village, the inhabitants of which might be desirous to avail themselves of it. Another very important objection also to generally extending the privilege (though not applicable to the present case) would be the absence of any supervision by European officers over the dispensaries, were they to become commonly established throughout the country. On these considerations, then, the President in Council would not ordinarily feel disposed to comply with an application for aid towards the establishment of a hospital at any place where there are no Government establishments and no Government officers." Nevertheless, as the President in Council was "most reluctant to oppose any obstacles in the way of these generous and humane efforts on the part of the wealthy members of the native community to improve the social condition of their countrymen," and as he apprehended that "unhappily such applications are likely to be very infrequent," the Government of India sanctioned the proposals on the distinct understanding that the grant was not made "upon any recognition of the general propriety of affording assistance from the State to such undertakings." Experience has shown that the Government of India entertained a just view of the dangers of multiplying dispensaries in the interior. The number of dispensaries has enormously increased in Bengal of late years, not because "generous and humane efforts" have been made by wealthy members of the native community to provide their poorer brethren with medical aid, but because Government has afforded undue facilities for obtaining European instruments and drugs, and the services of medical officers, at the public cost. In 1860 the total number of dispensaries was 57. In 1864 Government issued a set of rules under which it bound itself to defray a portion of the medical officer's pay and to accept other charges in the event of subscriptions to a certain amount being guaranteed, without any reference to the situation of the proposed dispensary. The apprehensions expressed by the Government of India in 1849 have been fully justified. The State has been taxed under the pretence of medical charity to an extent which was never contemplated. The number of charitable dispensaries increased from 57 in 1860 to 135 in 1867; in 1873 it was 198; in 1879 it was 255. It was sufficient for a few well-to-do persons to give a guarantee of subscriptions to a certain amount. A "charitable dispensary" was at once established. They were supplied with an Assistant Surgeon or Native Doctor, half, and in many cases the whole, of whose pay was defrayed by Government, with an expensive equipment of European instruments which were intended for the poor, but were never used, and an equally expensive equipment of European drugs which were also intended for the poor, but were chiefly used by themselves and their families. The results of the absence of supervision by European officers have markedly justified the objection of the Government of India. Dispensaries which receive State aid on the assumption that they relieve the sick poor, and which supply returns showing large numbers of patients, are found to do little more than afford medical attendance and drugs to the subscribers. Enquiry

has shown that the returns are quite fictitious, and that they represent numbers far exceeding those actually relieved. The complaints that have been made indicate the object with which the subscribers originally contributed; and if a free supply of European medicines is not forthcoming, subscriptions are frequently withdrawn. In one place, it is complained, the supply of medicines, though sufficient for the dispensary patients, is "not sufficient for the amlah of the Nawab, the supporter of the dispensary." It is clear that the system has developed into something quite different from what the Government of India contemplated in 1849, and that, whether the provision of charitable medical relief is or is not an object in aid of which the funds of the State may properly be expended, a great part of the charge thrown upon Government for the support of these dispensaries does not represent charitable relief at all. In one respect, however, though perhaps at too heavy a cost, the system has done good. It is reported that the people have learnt to appreciate European medicine and European treatment, and that the richer classes, finding that they can no longer obtain medicines gratuitously, are willing to purchase them from the dispensary stores. This, however, cannot be permitted. Medicines can only be supplied at cost price from Government stores for strictly charitable purposes. Private practitioners are now sufficiently numerous to supply medicines for those who are able to purchase them. The policy which the Lieutenant-Governor proposes to follow in regard to these dispensaries was stated in the Resolution on the last report. He is unwilling to take any active measures to contract the system generally. Wherever a dispensary, classed under the old rules, is found to be serving really charitable purposes and to require assistance, the existing arrangements will be maintained so long as the conditions of the rules are fulfilled. Only where this is not the case will the dispensary be closed. As regards the future, the Lieutenant-Governor considers that the principles of the Government of India's orders in 1849 should be observed. It is no longer necessary for Government to assist in the establishment of dispensaries with the view of introducing European medicine to the people. In the event of any epidemic, Government will of course, as it has always done, take special measures of medical relief, and where a Government medical officer is stationed, arrangements will always, as hitherto, be made for the relief of the sick poor if any necessity exists. But for ordinary purposes the existing system of dispensaries is more than sufficient, and it will be recognized in the new rules that Government will not bind itself, as a matter of course, to any fixed scale of aid for the establishment of new dispensaries.

3. The number of dispensaries open on 31st December 1879 was 255. Of these, 9 were removed from the list during the year. Some were closed because subscriptions were not forthcoming. The supporters of one were unwilling to recognize any control from Government after the privilege of a free supply of instruments and medicines had been withdrawn. It is very satisfactory to observe that the number of first class dispensaries,—that is of dispensaries which are entirely self-supporting,—has increased from 21 to 33. One dispensary was established in December. Returns are given from 251 dispensaries, as some were not closed till late in the year. Of the total number, 158 received in-door patients against 155 in 1879. The in-door work of most of these, however, was very trifling. Altogether 30 received less than 25 patients during the year; 80 received less than 100; and 128 less than 250. The in-door department of many of the smaller dispensaries has now been closed with the concurrence of the Committees. Dr. Payne, however, points out that arrangements for the reception of house-patients must be maintained in the dispensaries on pilgrim routes.

4. There was some improvement in the supervision exercised by the Managing Committees during the year. The number that met once a month or oftener was 39 against 26 in 1879. The number of Committees which held no meetings fell from 39 to 24. The number of visits paid by Civil Surgeons shows a reduction. The Lieutenant-Governor agrees with Dr. Payne in thinking that it is not as a rule desirable that Civil Surgeons should leave their important duties at the head-quarters of the district to visit small dispensaries more frequently than twice a year. It is not satisfactory, however, that as many as 24 dispensaries received no visit of inspection during the year.

5. The recorded number of patients treated shows an increase on the previous year. As was stated in the last Resolution, however, there can be no doubt that the figures are utterly unreliable. It is to be hoped that careful scrutiny of the monthly returns, and proper enquiries on the occasion of inspections, may gradually induce some improvement; but the evidence of the Civil Surgeons makes it quite clear that in very many cases the Dispensary books are systematically written up without any reference to the number actually treated. It is impossible to distinguish trustworthy from imaginary figures, and no deduction regarding the condition of the public health or the usefulness of the dispensaries at large during the year can be drawn from the statistics. The following are the figures given for the past five years :—

| | |
|---|---|
| 1876 ... ... ... ... ... | 853,561 |
| 1877 ... ... ... ... ... | 899,585 |
| 1878 ... ... ... ... ... | 956,256 |
| 1879 ... ... ... ... ... | 890,842 |
| 1880 ... ... ... ... ... | 911,662 |

The district figures present results similar to those noticed in the last Resolution. It may be inferred, from the remarkable absence of variation in the figures, that each dispensary continues to return what has been settled as its established number of patients. The divisional percentages of patients treated to the total population are—

| | 1879. | 1880. |
|---|---|---|
| Burdwan ... ... ... ... | 2·5 | 2·4 |
| Presidency ... ... ... ... | 2·29 | 2·29 |
| Rajshahye ... ... ... ... | 2·05 | 2·36 |
| Orissa ... ... ... ... | 1·54 | 1·44 |
| Dacca ... ... ... ... | 1·37 | 1·41 |
| Chittagong ... ... ... ... | ·58 | ·55 |
| Patna ... ... ... ... | 1·61 | 1·69 |
| Bhagulpore ... ... ... ... | ·87 | ·92 |
| Chota Nagpore ... ... ... ... | ·57 | ·51 |

No less than 13 districts show the same figure to one place of decimals as in the previous year.

6. The general death-rate of all the dispensaries is given as 15 per cent. Boda in Julpigoree and Aurungabad in Gya had 50 per cent., Raneegunge 41·15, Sherepore in Bogra 40, Barrackpore 37·2, Ranaghat 33·3, Deoghur 32·7, Serampore 29·9, Jajpore in Cuttack 29·4, Burhee in Hazaribagh 29·5, and Pooree 29·3. In some of these cases the high death-rate is explained either by the very small number treated, or by the class of patients received. Thus Boda and Aurungabad had 2 patients only during the year, and in each case 1 died. Sherepore treated 10 with 4 deaths, and Ranaghat 21 with 7 deaths. Raneegunge, Deoghur, Jajpore, Burhee, and Pooree come under the second category. They receive large numbers of pilgrims, of whom many only go to hospital in the last extremity of illness or debility, and thus they always show a large death-rate. The high death-rate at Barrackpore in 1878 and 1879 was noticed in the last Resolution. This dispensary has now been closed. At Serampore 417 patients were treated, and of these no less than 125 or 29·9 per cent. died. The Surgeon-General reports that the fatal cases occurred among pilgrims and starved people brought by the police.

7. The Surgeon-General has properly omitted the table purporting to show the proportion which the principal diseases bore to the total quantity of sickness returned. If the gross returns are useless because they are exaggerated, the particular returns of classified disease are doubly useless from the combination of want of truth and want of knowledge on the part of some of their compilers. Dr. Payne remarks: "Of the previous tables, it may be said that hereafter, if any approach to a true record should be made, they may serve to show the magnitude of the error which had to be corrected; but for the table which I now omit, even this inglorious future cannot be predicted, because, though dispensary records should come into relation with the public sickness of the day, proportions of disease, as named by most of the native doctors of 1880, will never be accepted even as types of error." This is severe criticism, but it is fully justified by facts which have been ascertained beyond doubt.

8. The increase in the consumption of cinchona febrifuge among the people is interesting. There is no reason to suppose that the increased demand was caused by any increase in the prevalence of fever. The figures for the last three years are—

| | Quantity. | | | Value. | | |
|---|---|---|---|---|---|---|
| | lbs. | oz. | dr. | Rs. | A. | P. |
| 1878-79 ... ... ... | 67 | 1 | 8 | 1,252 | 5 | 0 |
| 1879-80 ... ... ... | 103 | 9 | 12 | 1,885 | 15 | 0 |
| 1880-81 ... ... ... | 163 | 9 | 10 | 2,885 | 8 | 3 |

9. The number of major operations performed by Civil Surgeons as Superintendents of dispensaries was 513, against 492 in 1879 and 426 in 1878. The number performed by medical subordinates was 2,037, against 2,110 in 1880 and 2,274 in 1879. The total number of minor operations, including those remaining over from the previous year, was 46,696. The Lieutenant-Governor is glad to see a steady increase in the number of operations performed by Civil Surgeons, and, if the decrease shown in the number of major operations performed by medical subordinates is genuine, he considers it a matter for regret. The Lieutenant-Governor does not doubt that Dr. Payne is justified in holding that the returns of minor operations are not trustworthy. Some of the facts which have been reported show that the figures cannot be accepted as a record of work really done; but it does not appear that the use of the new form of inspection report has lead to any great fictitious increase. The form was only introduced in 1879, and the total number of minor operations under treatment was 46,683 in 1879 and 46,696 in 1880. There was a decrease, it is true, in the number of cases at sudder dispensaries; but the increase at outlying dispensaries is only a part of the general increase in attendance that the returns exhibit, and it does not call for special remark. Fictitious returns under this head are merged in the great aggregate of fictitious returns. The pettiness or importance of the operations is a different question. So long as the actual importance of the petty operations returned is as correctly gauged as it is at present, no one is likely to be misled by the returns. But the mere fact that the operations are in many cases petty, affords no ground for excluding them altogether from the returns. On the whole, it seems to the Lieutenant-Governor that an increase in the returns of minor operations calls neither for special commendation, nor for serious denunciation. As regards major operations, the Lieutenant-Governor repeats what he has said on previous occasions, that the prosecution of surgery is one great means of obtaining the confidence of the people, and thus popularizing European treatment generally; and he will be glad to see an increase in the number of major operations performed.

10. The new forms of Financial Statement have only recently been introduced, and it has not been thought desirable to delay the report for the incorporation of the accounts of the different dispensaries. A separate report is promised by the Surgeon-General on this branch of the administration of the year.

11. Dr. Payne concludes his report with a detailed statement reviewing the working of each dispensary during the year. This statement will be very valuable for purposes of comparison hereafter. Meanwhile, it will serve to show Magistrates and Civil Surgeons the work done in other districts. Dr. Payne draws special attention to the interest displayed by Mr. Anderson, Magistrate of Bankoora, in the management of the dispensaries in his district. The Lieutenant-Governor believes that civil officers can do very much, with little trouble to themselves, to improve dispensary management and encourage the medical officers. The assistance of the police has been freely given with much advantage, in testing the statements on which hospital assistants base their applications for leave.

No. 3159.

FROM THE SURGEON-GENERAL FOR BENGAL,

TO THE SECRETARY TO THE GOVERNMENT OF BENGAL,
JUDICIAL DEPARTMENT.

*Dated Calcutta, the 30th July* 1881.

SIR,

I HAVE now the honor of submitting the financial statements of dispensaries in Bengal for the past year as a supplement to the report submitted by me on the 8th ultimo. The statements have been prepared in the forms sanctioned by the Government of India in their resolution dated 28th January 1881. The immediate introduction of these forms was ordered on the 2nd February last, and the civil surgeons were supplied with the necessary forms on the 19th idem. The last of the revised statements was received in this office on the 28th ultimo.

2. Full information is now given concerning invested funds, deposits in savings banks, and floating cash, though it remains to establish uniformity in the manner of recording deposits in savings banks. In Part I, Statement V, the actual cash in hand or in the district treasury, which does not yield an income, has been recorded; whereas in Part II all money invested either in Government securities, railway shares, landed property, or loans, and money deposited in savings banks, appears.

3. The statements have been checked in this office as far as possible. Many discrepancies were found in the district statements on the introduction of the new system. These were rectified in communication with civil surgeons, but discrepancies of the nature noticed in paragraph 12 of the resolution of Government on the annual report for 1879 will still be apparent. As these and others must be fully elucidated, I propose to take the principal

columns of the statements in order, and explain the several points which appear to require explanation.

TABLE No. 12.—PART I.

INCOME.

TABLE No. 12.—PART II.

*Invested Capital.*

| | Rs. | A. | P. |
|---|---|---|---|
| Balance on 1st January 1880 ... ... ... | 8,55,088 | 12 | 0 |
| Invested during the year ... ... ... | 46,596 | 2 | 5 |
| Total ... | 9,01,684 | 14 | 5 |
| Securities sold ... ... ... ... | 4,000 | 0 | 0 |
| Deposits withdrawn ... ... ... | 14,412 | 2 | 5 |
| Balance on 31st December 1880 ... ... | 8,83,272 | 12 | 0 |

4. *Balance.*—Balances in the new forms are divided into two distinct heads,—one for cash and the other for invested capital, the latter representing the par value of Government securities, municipal debentures, railway shares, landed property, and money lent, as well as cash deposited in savings banks. The balances on 1st January 1880 were Rs.75,611 cash and Rs. 8,55,088 invested. These amounts differ considerably from the balances shown on 31st December in the report for 1879. The cash balance does not correspond, because the money deposited in the savings banks was almost in all cases reckoned in the accounts of 1879 as floating cash balance, but in the accounts of 1880 the floating balance represents only the actual cash in hand or in deposit in the district treasury, the deposits in the savings banks being reckoned as investments. In some of the dispensaries mistakes in the cash balance previously recorded, but now rectified, caused the difference. There were also diversities of practice in 1879,

Unadjusted or undrawn interest was included in some places in the balance in hand, while in others it was excluded. The balances of dispensaries closed during the year, and from which no returns have been received, have necessarily disappeared. The total balance of cash and invested capital on 1st January 1880 was Rs. 9,30,700, to compare with Rs. 7,64,836 in the report for 1879 shown as balance on 31st December. The difference is due to the following causes:—

In the year under review the endowment of the Latuda dispensary, amounting to Rs. 36,000, has been included in investments; similarly the entire amount, Rs. 1,07,400, invested for the joint maintenance of the Beaulea and Nattore dispensaries and a school, has been exhibited as investment of the dispensaries with a footnote. In the Jamooe dispensary Rs. 10,666 was shown in 1879, which should be Rs. 13,400, being the entire amount for the joint maintenance of the dispensary and a school, which have not been separated. Rs. 6,000, invested in landed property for the Balasore dispensary, was omitted from the report of 1879, but is now included. If these amounts are added to the total balance shown in 1879 and the sum treated as invested, the amount will be Rs. 9,31,939, against Rs. 9,30,700 on 1st January 1880. The difference of Rs. 1,239 is due to the causes noticed above in detail.

5. The balance on 31st December 1880 was Rs. 71,472 in available cash and Rs. 8,83,272 in invested capital, exclusive of Rs. 3,952 made over to the Roserah and Revelgunge municipalities in which the management of the local dispensaries was vested. In the former item there is a reduction of Rs. 4,139 on the opening balance, and in the latter item an increase of Rs. 32,136, inclusive of the capitals of the Roserah and Revelgunge dispensaries. This indicates that the financial condition of dispensaries in Bengal is good on the whole. The invested capital on 31st December 1880 comprises the following:—

| | Rs. | A. | P. |
|---|---|---|---|
| In Government securities of 4 or 4½ per cent. ... | 7,86,200 | 0 | 0 |
| Government debenture of 5 per cent. ... ... | 2,000 | 0 | 0 |
| Municipal debentures (Calcutta) ... ... | 2,000 | 0 | 0 |
| Railway shares ... ... ... | 19,000 | 0 | 0 |
| Landed property ... ... ... | 6,000 | 0 | 0 |
| Money lent ... ... ... | 7,085 | 0 | 0 |
| In Government savings banks ... ... | 64,939 | 13 | 7 |
| Total ... | 8,87,224 | 13 | 7 |

6. It is desirable to ascertain the actual disposable balance at credit of the dispensaries, as well as the nature and amount of real investments; but discrimination under the prescribed headings in the statements is not possible, as money in deposit in the savings banks, even in a current account, is shown as invested in one total with the Government securities, &c. I have therefore prepared a separate statement (appended to the standard series of forms) which shows the nature and amount of the several investments. This table will be found very useful in determining the financial condition of a dispensary as regards the cash and capital balances remaining at its credit.

7. *Income from Government as salaries.*—This column represents the payment by Government on account of salaries to medical officers attached to dispensaries. Government grants, in this respect, are supposed to be regulated by the classification of dispensaries under the dispensary manual. In many cases, however, Government allows full salary to medical officers, and in many others irregular salaries have been allowed. In the year under review Government paid Rs. 102,364, against Rs. 107,209 in 1879 in salaries. The amount exhibited under each dispensary will not exactly correspond with the total annual aid granted by Government. The difference is due to undrawn pay for a portion of the year, to increase of pay taking place during the year, and to the transfer of officers of unequal status, which affects their pay. Other differences, more or less important, may also be found; but more minute enquiry could not be made this year in the absence of complete information.

8. *Income from Government as registers and forms.*—In the other part of the report the altered method of supplying forms has been noticed. The forms in 1880 were issued on combined indents, partly from the medical store department and partly from the stationery office. As the statement of their price was

received very late from the latter place, there was no time for civil surgeons to distribute the cost among the dispensaries. This is not, however, a matter of much consequence. The prices have been divided in this office in accordance with the daily average number of patients treated. In some of the dispensaries the cost of forms indented for in 1879, but supplied in 1880, has been shown. The total cost of forms amounted to Rs. 2,642 only in 1880. The amount expended in the previous year cannot be ascertained, as the cost was included in one head with that of Europe medicines. The reduction of cost under the new arrangement has been enormous. A single instance, which forms the principal item of expenditure, may be given here. There is no record of the number of particular forms used in 1879, or in the previous years; but taking it for granted that there were 888,095 out-patients treated in 1880, and one ticket issued to each patient during the year, the value would be Rs. 27,753, at the rate of 6 pie each, the price charged by the Government of India to the Bengal Government. Under the present system of supply, the cost to Bengal Government would be for the same number of tickets Rs. 694, at the rate of 1 anna 3 pie per 100, the price now charged by the printing department under this Government. The charges of the store department were therefore forty times greater than the present rate. Requirements for forms were also carefully checked with past expenditure, and no unexplained excess was allowed.

9. *Income from Government as European medicines.*—Under the orders of Government for the re-classification of dispensaries in Bengal, all the dispensaries except those entirely maintained by Government, for Government estates or otherwise, are now required to pay for their medical stores. In special cases, where the financial condition of a dispensary was not prosperous, Government allowed a money grant to meet the cost of medicines. The special Government dispensaries mentioned above are Bissiparrah and Ungool in Cuttack, Kurseong and Kalimpong in Darjeeling, and the irrigation hospital at Dehree. In a few cases no final orders have yet been passed by Government on the payment for medical stores. These are pending reports from civil authorities.

10. The total value of medicines supplied by Government in 1880 was Rs. 9,534, which chiefly represents the value of indents submitted in 1879 but supplied in 1880, before the orders of Government had effect on the payment for medical stores. In 1879 the cost shown in the report includes the value of forms, and cannot therefore be compared with the figures of 1880. Taking, however, both the value of forms and medicines, the Government contributed in 1880 Rs. 12,177 only, against Rs. 50,136 in 1879. Dispensaries were also allowed the option of purchase of medical stores locally in consultation with the civil surgeon of the district. I take this opportunity of mentioning that the establishment of an indent branch in this office has been very advantageous, inasmuch as all information which was previously wanting can now be obtained readily from the office records.

11. *Income from Government for diet on police cases.*—The income does not represent actual aid from Government to dispensaries, though the payment allowed must on the whole largely exceed the outlay. It ought, in strict accuracy, to be excluded from the total in estimating the cost of dispensaries to Government, though in the account it must appear as a payment by Government. In 1880 the amount received on this account was Rs 1,390, against Rs. 1,422 in 1879.

12. *Income from Government by sale of medicines.*—This heading under the new system will only be found useful in cases where the dispensaries maintained by Government will sell medicines or instruments. As the medical stores of a chargeable dispensary are now the property of the dispensary, there will be no occasion for the use of this column by a paying dispensary.

13. *Total income from Government.*—The total amount paid by Government was Rs. 1,30,576, or Rs. 41,858 less than that of 1879. The reduction chiefly arose from private payment for medical stores, and from the altered method of supplying forms. The contribution on account of salaries was Rs. 1,02,364, against Rs. 107,209 in 1879. This reduction is apparently due to the transfer of some of the dispensaries into Class I of the rules during the past year.

14. *Interest on investments.*—Interest is mainly derived from two sources—one from investment in Government or other securities, and the other from deposits in the savings banks. With reference to paragraph 12 of the resolution of Government on the report on dispensaries for 1879, it is necessary to submit a few words of explanation in this place. The discrepancies noticed arose in various ways:—

*1st.* When interest is not drawn during the year, or a greater portion of the year, either nothing is shown in the accounts or else the amount entered falls short of the sum apparently due. In other cases interest accumulated from other years was drawn, and excess over the due amount appeared.

*2nd.* The rates of interest are not uniform. In the Noakhally district the money lent to an estate under the court of wards', yields interest at 7 per cent.; Mozufferpore dispensary has East Indian Railway shares to the value of £1,900, which gives a varying dividend; in Balasore the Shamanundo Dey's dispensary has a zemindary worth Rs. 6,000 made over to Government, which yields a net income of Rs 500 per annum; in the Burrisal dispensary Rs. 3,200 is lent on bond at 12 per cent.; and in the Ungool dispensary Rs. 160 is invested at 25 per cent. per annum. The income is therefore regulated by the nature of investments.

*3rd.* As regards the dispensaries which show an income from "interest on investments" without any invested capital being shown in the statement, it is to be observed that the dispensaries which had exclusive transactions with the savings banks could not, under the old system of accounts, show any portion of the savings banks deposits as invested capital, while the interest drawn was shown as such. It was the former custom in this office to recognize only Government or other documentary securities as invested capital, the savings banks deposits being reckoned as floating cash balance. These discrepancies have disappeared under the new system of accounts.

15. Even now some anomalies will be apparent in the accounts. In some places the interest accrued on savings banks deposits is not drawn, but added to the capital at the end of the year; and when any portion of the deposits is withdrawn, it appears in the column of "sale of securities or withdrawal of deposits." This has the effect of showing an invested capital in the accounts without an income, and vitiates the balance remaining at the end of the year. These discrepancies can, however, be avoided by a process of double entry in the accounts, and I propose to instruct civil surgeons accordingly for their future guidance.

16. As regards the discrepancies noticed for the Latuda dispensary in Nuddea, it should be explained that the income of this dispensary being derived from a private endowment fund, the interest of which is applied to the maintenance of the dispensary, the amount of endowment had not been shown as invested capital of the dispensary in the accounts of 1879. As, however, the endowment was for the special purpose of maintaining the dispensary, this omission has been rectified, and the amount exhibited as investment. In the cases of the Beaulea and Nattore dispensaries Rs. 107,400 was invested for the joint maintenance of the dispensaries and a school, and is called the Prosunnonath Fund. No separate allotments have been made to the institutions, and the income therefore constitutes a general fund, which has been entered in column "income from local or other funds." If the share of the dispensary in the income were shown as interest on investment, the amount would stand in no intelligible relation to the total investment for the school and dispensaries. Other instances more or less similar might be given, but these will probably be sufficient.

17. *Income from sale of securities or withdrawal of deposits.*—The heading explains itself. It should only be added that sums corresponding with those shown in this column appear in columns 7 and 8 in Part II of the statement. Differences in the corresponding items in the statements are possible from the fluctuations in value of securities disposed of, but none occurred in 1880.

18. *Expenditure on European medicines.*—The system of supplying medicines on a combined indent has been referred to in detail in paragraph 20 of

the main report. The expenditure on medicines in 1880 was Rs. 25,531. This does not represent the entire outlay, as the value of medicines obtained, but not paid for, in 1880 could not be included in the accounts of that year. As it will be useful to know the actual charges of each dispensary on this account, I have entered them in a separate column in red ink. This column shows that Rs. 7,128 worth of medical stores were obtained from the store department, the charges for which remained unadjusted at the end of the year. In some dispensaries the valuations of medicines supplied in 1880 on indents submitted in 1879 have been shown, as well as the money paid for the supply obtained from the medical store department in 1880. The expenditure will in these cases appear anomalous, and cannot with accuracy be compared with that of other years; but taking both the items, viz. Rs. 25,531 and Rs. 7,128, the expenditure on Europe medicines alone was Rs. 32,659; and if Rs. 2,642, on account of cost of forms, be added to this amount, the total expenditure would be Rs. 35,301, to compare with Rs. 61,003, the corresponding figure in 1879. The reduction of Rs. 25,702 is mainly due to the reduction in the cost of forms. Medicines also have not been supplied during the year in indents for 1880 to some of the dispensaries, and these have altogether been excluded from the report.

19. *Expenditure.—Miscellaneous charges.*—The cost of forms supplied by Government free of charge is entered in this column, as well as all other charges not specified in columns under the head "expenditure."

20. *Expenditure.—Investment during the year.*—All money invested either in Government securities or in the savings banks is entered in this column. It will be observed here that the amounts do not necessarily correspond in all cases with those entered in the column "invested during the year" in Part II of the statement. The fact is that the actual cost incurred for the purchase of a document is shown in Part I, while the par value of the security is exhibited in Part II.

21. *Percentage of total cost paid by Government.*—I find that the practice heretofore observed in this office was to include the amounts invested in the expenditure of the dispensary in calculating the proportion of cost paid by Government. The invested capital of a dispensary does not form a recognized or necessary part of the expenditure for maintenance. Such entries are shown in the statements for adjustment of accounts, and the inclusion of investments in the expenditure proper makes the latter unduly large, and has the effect of showing a fallaciously small proportion in the payment by Government. I have, however, followed the old principle for 1880, but I propose with the approval of Government to calculate the percentage after excluding the invested capital from annual expenditure in future. The true proportion which Government contributed to the true total outlay in 1880 was 32·4 per cent., against 29·07 per cent. calculated under the old system.

I have the honor to be,

SIR,

Your most obedient servant,

A. J. PAYNE, M.D.,

*Surgeon-General for Bengal.*

# STATEMENT No. V—PART I.

*Showing the Income and Expenditure of Dispensaries in Bengal for the year 1880.*

## MEDICAL & MUNICIPAL DEPT.

### MEDICAL.

CALCUTTA, THE 20TH SEPTEMBER 1881.

## RESOLUTION.

READ—

Letter No. 3159, dated the 30th July 1881, from the Surgeon-General, submitting the financial statements of the charitable dispensaries in Bengal for the year 1880.

Read again—

The report for the year 1880, and the orders of Government thereon.

The financial statements of dispensaries in Bengal for the year 1880, now under review, have been prepared in the forms prescribed by the Government of India, in the Home, Revenue, and Agricultural Department, in the orders Nos. 1—43-54, dated the 28th January last. These statements could not, as explained by the Surgeon-General, be incorporated with the general report, as sanction to the revised forms was not received until the returns had been prepared in the old form.

2. The opening balance of the year 1880 is shown in the present statements to have been Rs. 75,611-4-3 in cash and deposits in the Government treasury, and Rs. 8,55,088-12 in investments yielding interest. These amounts differ from the balances* on the 31st December 1879, as shown in the report for the year 1879. The discrepancy is due to various causes explained in the present report, the principal causes being that the endowments mentioned in paragraph 4 of the report were omitted last year from the list of investments, and that funds deposited in saving banks were in previous years usually included in the floating cash balance. The balance at the close of the year was Rs. 71,472-3-3 in cash and deposits in the Treasury, and Rs. 8,83,272-12 in investments.

| * | | Rs. | A. | P. |
|---|---|---|---|---|
| Invested | ... | 6,42,631 | 0 | 0 |
| Floating | ... | 1,22,205 | 9 | 11 |
| Total | ... | 7,64,836 | 9 | 11 |

3. The total income of all the dispensaries in the interior during 1880 was Rs. 4,26,553 against Rs. 4,57,312 in 1879, and the sources from which the income of the year was derived are shown below:—

| | | Rs. | A. | P. |
|---|---|---|---|---|
| From Government ... ... | ... | 1,30,576 | 1 | 0 |
| „ Local, Municipal and other Funds | ... | 95,498 | 7 | 11 |
| Interest on investments ... ... | ... | 32,471 | 12 | 7 |
| Private subscriptions and donations ... | ... | 1,68,006 | 5 | 0 |
| Total | ... | 4,26,552 | 10 | 6 |

The expenditure amounted to Rs. 4,02,781 against Rs. 4,36,423 in 1879, the details being as follows:—

| | | Rs. | A. | P. |
|---|---|---|---|---|
| Establishment ... ... ... | ... | 2,65,912 | 7 | 1 |
| Medicines ... ... ... | ... | 35,337 | 5 | 0 |
| Diet ... ... ... | ... | 33,234 | 10 | 11 |
| Miscellaneous charges ... ... | ... | 28,888 | 15 | 8 |
| Building or repairs ... .. | ... | 39,407 | 11 | 7 |
| Total | ... | 4,02,781 | 2 | 3 |

According to these figures, which are taken from Statement No. V, Part I, the balance at the close of the year 1880 was only Rs. 2,883 in excess of the opening balance. The above statement of receipts does not, however, in all

cases, show the interest that accrued in the year and was added to the invested capital without being drawn. Taking this into consideration, the balance at the close of the year exceeded the opening balance by Rs. 24,054.

4. The statements now submitted furnish complete information regarding the nature of the funds of the several dispensaries. Part I of Statement V shows the actual cash in hand or in the district treasury, and exhibits the actual charges incurred in the purchase of securities and on other expenditure. Part II of the statement contains particulars of all dispensary funds invested so as to yield a return, the value of the investments being entered at par. The total value of the investments held by dispensaries in Bengal at the close of the year 1880 was as stated above Rs. 8,83,272-12 against Rs. 8,55,088-12 at the beginning of the year. Of the former sum Rs. 7,88,200 was invested in Government securities, Rs. 2,000 in municipal debentures, Rs. 19,000 in railway shares, Rs. 6,000 in landed property, and Rs. 60,987-12 in Government Savings Banks, while Rs. 7,085 was invested in other ways at favourable rates of interest. Under the rules of the revised Dispensary Manual now under issue, the investment of dispensary funds in any but Government securities is prohibited, unless the sanction of Government is first obtained. In two cases the invested capital entered in the return is for the maintenance of a school as well as for a dispensary.

5. Comparing the receipts in detail with those of 1879, it appears that Government contributed Rs. 1,30,576 in 1880, against Rs. 1,72,435 in the previous year; municipalities Rs. 46,466, against Rs. 40,687; other local funds Rs. 49,032, against Rs. 56,213; while the receipts from private subscriptions and donations were Rs. 1,68,006 against Rs. 1,55,384 in 1879. The decrease in the Government contribution to dispensaries was to a great extent nominal being accounted for by the lower value now placed on the medical forms supplied gratuitously by Government. The duty of supplying these forms was last year transferred from the Medical Store Department to the Stationery Office, and the Surgeon-General estimates that the saving under the new arrangement will be more than Rs. 27,000 per annum.

6. Under the orders that have been passed in the last two years regarding the re-classification of dispensaries, all those institutions which are not entirely maintained by Government are now required to pay the cost of the medicines and instruments supplied from the Government Stores. The few cases referred to by the Surgeon-General in paragraph 9 of his report as still awaiting final orders have all been disposed of. The special Government dispensaries, which now rank under class III of the rules issued on the 6th instant, are those at Bissiparrah and Ungool in the Cuttack district, at Kurseong and Kalimpong in the Darjeeling district, and the Irrigation hospital at Dehree.

7. The Lieutenant-Governor approves the suggestion of the Surgeon-General in paragraph 15 of his report, that in order to avoid confusion in the accounts and returns, all interest accruing on investments should in future be shown as interest, even when it is not drawn but added to the capital at the end of the year. In the latter case the amount will be shown again as an investment. The Lieutenant-Governor also approves the proposal in paragraph 21 of the report to exclude amounts invested during the year from the gross expenditure before calculating the proportion paid by Government towards the cost of a dispensary. The investment of an endowment or of the surplus funds of an institution, is certainly not a portion of the year's outlay. Of the total cost of maintenance of the 250 dispensaries in the interior of the province in 1880, 32·4 per cent. was contributed by Government.

By order of the Lieutenant-Governor of Bengal,

H. M. KISCH,

*Offg. Secretary to the Govt. of Bengal.*

No. 1215.

Copy forwarded to the Surgeon-General, Bengal, for information and guidance, with reference to his letter cited in the preamble. With reference to paragraph 9 of his letter, his attention is invited to the orders of Government cited in the margin.

No. 299, dated 19th March 1881.
No. 1022, dated 29th August 1881.
Nos. 1222-3, dated 23rd November 1880 (copy enclosed).

Circular No. 20.

Copy forwarded to all Commissioners of Divisions for information and guidance, and for communication to district officers, in continuation of circular No. 11, dated the 27th June last.

No. 1216.

Copy, with a copy of the report, forwarded to the Sanitary Commissioner for information, in continuation of endorsement No. 749, dated the 27th June last.

No. 1217.

Copy, together with a copy of the report, submitted to the Government of India, in the Home Department, for information, in continuation of endorsement No. 750, dated the 27th June last.

1882.

# Report on the Charitable Dispensaries

UNDER THE

## GOVERNMENT OF BENGAL

### FOR THE YEAR 1881.

FROM THE SURGEON-GENERAL FOR BENGAL,

TO THE SECRETARY TO THE GOVERNMENT OF BENGAL,
MEDICAL AND MUNICIPAL DEPARTMENT.

*Calcutta*, *6th June* 1882.

SIR,

IN the reports on the dispensaries of Bengal for the years 1879 and 1880 the topics principally discussed were those which related to the necessity for reform. The administration of medical charity in the province had grown year by year under local representations. There had been little or nothing of organisation or uniformity of method; for, although a code of rules existed, its provisions were such as to bind the government, while the conditions laid on other parties to the contract left them practically at liberty to demand dispensaries where there was no prospect of public usefulness from them, and enabled them to fulfil or neglect their agreements, much as they pleased. English drugs had come to be appreciated, even in remote places, by the wealthier people, who were not slow to take advantage of the concessions which they could claim under the rules. Representations of public want were supported by district and divisional officers, who applied no test to the statements, which were accepted without criticism by government. Dispensaries multiplied rapidly. The supply of medical officers qualified to deal, even with the simplest illness, was quite unequal to the demand. Native compounders and apprentices, who could scarcely pretend to know the names of drugs, were entrusted with the charge of dispensaries, with the disposal of large stores of government medicines, and with the care of costly instruments. The natural consequences were waste of government money, which was lavishly used in paying incompetent persons for misusing the public property, and every other form of abuse by which untrustworthy agents secure their own interest at the public expense. The primary objects of charity were carried out by a very few while, year after year, fictitious figures were presented to the government and gravely criticised as evidence of successful work.

2. This was the state of affairs which the government had suspected in 1878, when the committee on medical expenditure laid down the broad lines of reform. They advised that gratuitous issue of medicines should be forbidden by government, and that a fundamental change should be made in the method of educating hospital assistants. Ignorance of practical work among this class had been exposed as a public scandal, for not only had persons without paper qualifications of any kind been employed, but the pupils of the largest school had shown themselves to be almost as useless as those who had received no teaching. The Lieutenant-Governor had, as early as 1877, expressed doubts concerning the policy of multiplying dispensaries, which

be based on the untrustworthiness of returns, the impossibility of effective control at a distance, and the manifest want of confidence in the dispensaries on the part of the people, but he had hoped for improvement under closer attention from superintending officers.

3. By the end of 1879 a further increase of numbers had taken place, but signs of internal improvement had appeared. Civil surgeons had given more attention to dispensaries, and had begun to report on them in a manner which showed some critical insight. Neglect of records, losses and false returns of government property, were reduced, order and cleanliness had become more common, and local committees had been stimulated. But the knowledge now obtained proved also the uselessness of many institutions to the sick poor, and the unworthiness of the motives which had led to their establishment. There was urgent demand for minute enquiry into the history and character of every dispensary on the list. Prohibitory orders had been issued regarding gratuitous medicines, and marked improvement was already apparent in the pupils of the Campbell school; but if government was to supply better medical officers they should be supplied primarily for the public service, not for private families; and, if government money was to be used for local charity, there should be evidence that it was needed and rightly applied

4. Enquiry was pursued in 1880. Many changes were made, and the foundations laid by government for others, until, by the end of the year, there seemed to be some prospect of an intelligible system. Information obtained in the discussion of particular cases had, however, more than confirmed the unfavourable opinions before expressed, and shown that abuses had extended to every branch of dispensary work. It had become quite clear that radical faults of origin and constitution could not be prevented, but must even be repeated, so long as the government should continue to be bound by the rules in force. Orders were accordingly passed for revision; but, as enquiry advanced, it appeared that the existing code would not serve, even as a basis, for such regulation as was needed. The work of revision was therefore postponed until complete information should admit of its being done with finality. Nevertheless there was important progress in practical reform during the year.

5. The whole of the dispensaries began to pay for their medical stores, with the exception of four or five maintained by government for state purposes; and the option was allowed to managers of purchasing from private vendors. Money grants made to some institutions in lieu of stores were shewn to be unnecessary, and a limit of time was fixed. Many dispensaries were reclassified, as it was found that local funds were sufficient to maintain them without aid from government. Partial supporters of dispensaries which served no public purpose were required to maintain them entirely, or they were closed. Other dispensaries were entrusted to municipalities, and negligence of private committees obviated thereby. District funds were commenced with money accumulated in useless institutions, the object being to provide for local and temporary exigencies, which in former years had been met by setting up permanent dispensaries. Extravagant establishments were reduced. Measures were adopted for checking false returns. An intelligible system of granting leave to medical subordinates was introduced, and the evil of constant changes and evasion of duty on false or frivolous pretexts, was diminished. The standard of English qualification among hospital assistants was raised, and very great improvement appeared in the professional qualifications of the pupils of the largest school. Some useless persons were removed from the classes of assistant surgeons and hospital assistants, and the places of the latter were filled by recruits from Behar, which were much needed for service in that region where professional teaching had always been good. The newly organised class of civil hospital assistants threatened to involve the government in increased charges, and as they existed mainly for the service of dispensaries, the latter were required to provide accordingly. Means were taken to obtain trustworthy information as to the conduct and qualifications of subordinate officers, and supernumerary assistant surgeons who had before crowded the Calcutta hospitals and impeded their working, were distributed through the jails and medical institutions of the province, where they could help others and improve themselves.

6. In 1881 the most important item of progressive work was the issue of the new code of dispensary rules. The code embodies the many reforming

orders which had been passed during the previous year, but it also in effect liberates government from the obligation of establishing or continuing to support any dispensary of which it cannot be shown that it is necessary or useful as a medical charity; while the privileges of employing a government medical officer and obtaining medicines from the government stores are made to involve certain liabilities necessary for due control. Classification is greatly simplified, three classes only remaining, viz., the first or unaided class; the second or aided class; and the third or class supported entirely by government, with certain others specially constituted. Managers of dispensaries are allowed all liberty in the use of medical subordinates consistent with the strict discharge of duty to the sick. Books and forms to be used are specified in the code, and detailed rules given for conducting daily work, and for all else relating to the action of executive and superintending officers.

7. The improvement recorded in 1880, in the quality of the pupils passed from the Campbell school, continued and advanced in the year under report, and it would now seem that the object which the committee of 1878 had in view has been very satisfactorily accomplished, in the production of a class of men who are really able to do, with their own hands, all that is expected or desired from them. The officers who conducted the late examination, and who are impartial judges, have furnished the following information. Dr. Raye, examiner in anatomy, writes: "I was satisfied with the general result of the practical examination of the students at Sealdah in anatomy. I took of course a lower standard than I would adopt for the university examination, but bearing this in mind the students showed a very fair practical knowledge of the subject." Dr. McLeod, examiner in surgery, writes: "I was very much pleased with the result of my examination of the Sealdah students in surgery. I put them to a very searching test, examined them orally, practically as to the use of instruments and appliances; made each dissect a surgical region, and examined him on the dissection; made each perform an operation in my presence, and took them to the college hospital and examined them in cases they could not possibly have seen before. I found them well grounded in theoretical surgery, good bandagers, and well acquainted with the purposes and modes of using the commoner instruments, neat dissectors, familiar with surgical anatomy, and fairly good in minor operations. Their weak point was diagnosis. They seemed to want tact and instinct in rapidly identifying diseases."

Dr. Coates, examiner in medicine, writes:—"The examination this year was the first under the new arrangement," referring to its practical character. "The oral examination was conducted more carefully and minutely than before. Cases were brought from the hospital which the students could not have known beforehand. They were made to find out the diseases by regular clinical enquiry, describing what they found on auscultation, percussion, &c., and to give prognosis and treatment. They were brought into the laboratory and made to apply tests for albumen, sugar, &c.; take specific gravity, and point out the indications. They showed that they had had bedside training. The result pleased me much."

8. That the successful candidates fairly represent the teaching of the Campbell school is evident from the proportion of numbers. Of 47 candidates no less than 44 passed through the good practical tests above described. This proportion is due in some degree to an altered system in the school, under which habitual idlers are dismissed, and those only allowed to complete the course of study who show a genuine desire to profit by it. But, none the less on this account does the proportion of success under such examination show genuine work throughout.

9. The importance of this change to the future of dispensaries needs no exposition. The magnitude and special point of it will be seen by contrasting the foregoing opinions with the evidence of civil surgeons and others presented to the committee in 1878 concerning men of the same class. But it may yet be long before the useless men in the service give place to able successors. It has been necessary, therefore, to enforce the service rules, which require that hospital assistants shall keep up such knowledge as they were once supposed to possess, and to this end something was done in 1881. The rules required that a candidate for promotion from grade to grade, and consequent increase of pay,

should pass a professional examination but, under the old dispensary system, salaries were granted without order or uniformity, and some of the most incompetent men of the lowest grade were provided with incomes exceeding the pay of the highest grade. The object of the rules was entirely frustrated. These men had no desire to obtain promotion, having nothing to gain by it, and they would continue indefinitely to occupy posts to which others had earned better claims. In 1881, therefore, a fair period of grace was allowed; and it was ordered that any one, who failed to pass into the grade for which length of service qualified him, should be relegated to the pay of the grade he was holding. Under the freedom, as to salaries, permitted to managing bodies and private supporters of dispensaries, it must be feared that there will still be difficulty in securing the best incomes for the best men, but gradually this may be done which has been hitherto impossible.

10. Again, the rules for English qualification were modified under the new organization. The money value of this qualification is much higher than it was before, but those who had passed in English by the old low standard were receiving the benefit of the change, without showing that they even retained their former small knowledge of the language. It was ordered, therefore, in 1881 that whenever a hospital assistant shall present himself for professional examination, his knowledge of English shall be re-tested, or he will not be allowed to receive the full pay of the superior grade.

11. The option allowed to dispensaries of purchasing medical stores from private dealers, under the direction of civil surgeons, has been largely exercised. Of 231 dispensaries, 119 have elected this method, 107 continue to indent on government, and 5 have not yet decided.

12. Whether in 1881 the dispensaries of Bengal were or were not more useful than before, to the sick poor, it is difficult to say. Such evidence as figures afford on this point will appear in the subsequent paragraphs and in the notes on particular institutions. It is reasonable to conclude that, though far from correct in most places, the figures of the year are, on the whole, more trustworthy. Throughout the province more or less attention has been given to the manner of recording patients. In some places close criticism has been practised, and officers, who show no favor to laxity, have expressed themselves as satisfied with the returns of 1881. In others, complacency has led to similar judgment, and the figures themselves have proved it to be wrong. Closer attention has further shown the unlimited fallacies of previous years. The returns from outlying places were mere fables, and now afford no basis for comparison of real work. The number of days for which a patient received medicine was reckoned as so many attendances, to swell the average, and was also made in some manner largely to affect the totals. Fictitious entries were made without limit, and the practice of recording the visits of patients' friends, as those of sick persons themselves, was pursued in a manner which contributed greatly to exaggeration of work. The first of these practices was prevented during a considerable portion of 1881, in most of the districts, and the second was forbidden late in the year. Still the figures of the year were largely vitiated by both errors, and the vice of false entries prevailed in places. Thus, though the inspection reports of civil surgeons are much more satisfactory, in respect of figures, than they had been in former years, gross examples of falsification are not wanting. The civil surgeon, 24-Pergunnahs, inspecting the Taki dispensary, writes.—"The registers exhibit a uniform daily attendance of over 30 persons. Yesterday's entries are eight only, and though only eight attended, figures up to 15 have been written, and the spaces in the column opposite the seven extra numbers left blank. In explanation of this, I am first told that only eight attended. Later, in explanation of the reason for writing 15 numbers, I am told that more than eight attended, but a pain in the stomach prevented the hospital assistant from entering more. On my asking again, did eight attend or did more attend, the hospital assistant is silent." Dr. Jackson adds: "I cannot help fearing that but for my visit, the daily number would have been made up to 30 as usual." A visitor of the Ajodhya dispensary, in Beerbhoom, remarks: "Although it was past eight when I began recording my visit there appeared not a single patient." The record showed a daily number of about 14. Ludicrous returns of impossible surgical operations continue in places.

The civil surgeon of Backergunj notices that the house-patients of dispensaries consist mainly of cases of trivial injury sent in unnecessarily by the police. The magistrate ascribes this to a desire to magnify such cases into cases of grievous hurt, and has issued prohibitory orders. In another dispensary a sudden great rise of recorded patients took place after the dismissal of the compounder who was a relative of one of the committee members, or hospital assistant, and the magistrate and civil surgeon report that the increase was devised to make a plea for his restoration. On another occasion the magistrate found three in-door patients in a dispensary, and had no doubt that the only reason of their being there was to make out a case for additional expenditure on building.

13. If there be evidence in 1881 of greater usefulness in the dispensaries, it must be sought elsewhere than in the figures, and such tests as can be applied do not give favourable results. Epidemic fever spread over several districts, and cholera was more prevalent than in the previous year. It cannot be denied that if the dispensaries had been in any degree recognised by the people, as means of relief in sickness, they would have been in full requisition in 1881 and attendances very largely increased. The special sanitary officer in the Nuddea district reported his surprise at the small dispensary figures, in the midst of devastating fever, and the returns of the district tell the same story. The civil surgeon ascribes the diminished numbers to the stricter method of calculating averages; but this was introduced late in the year, and would not, or should not, in any case reduce totals, nor would its effect be appreciable if the dispensaries had worked as they ought. The same is true in less degree of other districts epidemically affected, and though it is also true that special medical aid was freely afforded to the people when the sickness had established itself, it is undeniable that, long before this occurred, there was such urgent need of medical aid as would have thronged the dispensary with applicants for it, if the people had thought it was to be found there.

14. It will be seen from this table that 17 dispensaries were closed during the year. These were institutions which had never shown any public usefulness, and represented only misuse of money. There still remained at the close of the year 231 dispensaries in the province. There can be no doubt that of these a very large number are useless for any legitimate purpose, and those which are useless are mischievous also, as furnishing opportunities for various abuses and taking civil surgeons away from important public duties for the purpose of inspection. That in some districts dispensaries exist in numbers which render effective control impossible is a fact which is now attracting the notice of the civil authorities. The commissioner of Dacca expresses himself with truth and force regarding the Mymensingh district when he says: "There are more dispensaries in this district than can be properly supervised, and it is desirable to require a considerable number of them to be either closed or placed in class I. Something has been done, but apparently not enough." Other officers do not hesitate to express their conviction that the people do not value the outlying dispensaries. Closure was perhaps less largely ordered in 1881 than it would have been if the reports on particular institutions had continued to the end of

the year. On the promulgation of the scheme of local self-government it appeared that the cost and responsibilities of medical charities would be transferred to local bodies, and that the work which was now being done in detail would be only a part of the greater change to follow. Consequently the critical reports on dispensaries which had progressed, district by district, were interrupted, and a complete account of the condition and merits of every dispensary in the province was submitted. This paper was prepared for the purpose of indicating the grants to be made to each local body, in respect of medical charities, and in it those institutions which had shown themselves to be useless, and those whose funds were sufficient for maintenance, were distinguished from the class on which public money might be legitimately bestowed.

15. From statement No. 1 of the appendix the classification of dispensaries at the close of 1881, according to the new rules, will be learnt. In 1880 the first step was taken towards making independent of government the institutions which were able to maintain themselves, or whose maintenance, though locally derived, could not be regarded as publicly useful. In that year the number of first class dispensaries rose from 21 to 33, and although the work of transfer was interrupted, as above stated, the number rose to 81 in 1881. There are still a very large number which may be similarly treated, or rather which will, when transferred to local governing bodies, require no money grant. The second class now comprises nearly all the dispensaries which made up the inferior classes in the statements of previous years, the total being reduced from 209 to 145 by the closures of the year and transfers to the first class.

16. The figures of the following table do not support the conclusion which at first sight they indicate, viz., that committees have met less often than in the previous year for the transaction of dispensary business. A dispensary, becoming independent of government, not unfrequently ceases to be managed by a committee, its affairs being controlled by the chief supporter or his agent. Similarly, when a dispensary is transferred to a municipality, the special committee is dissolved and its affairs form part of the business of the corporation concerned. The civil surgeon, 24-Pergunnahs, comments very severely on the relations that exist between committees and dispensaries in his district, and I fear the cases are by no means exceptional. They indicate that numbers of recorded meetings are a very doubtful sign of charitable interest. Thus although government by appointed committees was not more satisfactory in 1881 than in previous years, the comparative diligence and interest shown by them would not appear, from such a statement as this, without a process of analysis which would not repay the time and labour of recording it.

Number of occasions on which committees assembled:—

| | | | |
|---|---|---|---|
| Monthly or oftener ... ... | 27 | Three times ... ... | 16 |
| Eleven times ... ... ... | 6 | Twice ... ... ... | 16 |
| Ten „ ... ... ... | 4 | Once ... ... ... | 13 |
| Nine „ ... ... ... | 7 | None held, or no record of them ... | 21 |
| Eight „ ... ... ... | 4 | No committee ... ... | 25 |
| Seven „ ... ... ... | 4 | Under municipalities ... ... | 51 |
| Six „ ... ... ... | 9 | | |
| Five „ ... ... ... | 10 | Total ... | 236 |
| Four „ ... ... ... | 23 | | |

TABLE No. 2.

*Showing the work of Dispensaries grouped in the order of numbers treated.*

| | In-door. | | | | | | | | | | Out-door. | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| | Under 25. | 25 to 50. | 50 to 75. | 75 to 100. | 100 to 250. | 250 to 500. | 500 to 750. | 750 to 1,000. | Upwards of 1,000. | Total. | Under 250. | 250 to 500. | 500 to 750. | 750 to 1,000. | 1,000 to 2,500. | 2,500 to 5,000. | 5,000 to 7,500. | 7,500 to 10,000. | Upwards of 10,000. | Total. |
| 1881 ... | 28 | 19 | 10 | 15 | 46 | 23 | 6 | 1 | 1 | 149 | 1 | 3 | 3 | 10 | 86 | 79 | 27 | 10 | 17 | 236 |
| Percentage ... | 18·79 | 12·75 | 6·71 | 10·07 | 30·87 | 15·44 | 4·03 | ·67 | ·67 | ... | ·42 | 1·27 | 1·27 | 4·24 | 36·44 | 33·48 | 11·44 | 4·24 | 7·2 | ... |
| 1880 . | 30 | 20 | 18 | 12 | 48 | 23 | 5 | ... | 2 | 158 | ... | 1 | 9 | 12 | 95 | 84 | 25 | 13 | 12 | 251 |
| Percentage ... | 18·98 | 12·66 | 11·4 | 7·6 | 30·38 | 14·55 | 3·16 | ... | 1 26 | ... | ... | ·4 | 3·58 | 4·78 | 37·85 | 33·46 | 9·96 | 5·18 | 4·78 | ... |

17. The insignificant numbers of house-patients treated has been the subject of remark in former years. In 1881 some of the dispensaries closed

had presented small numbers, and in others the smallness had led to orders confining the future practice to out-patients, in which direction something had been done in the previous year. Hence the reduced numbers in the first few columns of the table. The higher numbers show no increase over former years. In-door patients are much valued by the hospital assistants in charge of remote dispensaries, as they furnish a plea for entertaining idle relatives as servants, and give other facilities which are not desirable. The closure of an in-door ward is therefore often resisted, and strenuous efforts are made through committees for its restoration, on all sorts of pretences. It appears that, in very many places, the so-called house-patients are cases of slight injury received from the police which require no hospital treatment whatever, and a note by the magistrate of Backergunge, mentioned above, throws a new light on this practice. He finds it adopted for the purpose of magnifying the severity of injuries, and has issued orders to prevent, as he says, dispensaries from being converted into "manufactories of evidence." In other places the wards of dispensaries are mere refuges for lepers, old syphilitic cases, and other disabled paupers or outcasts; and in a third class they afford mere places of shelter for aged and prostrate pilgrims to die. It cannot, I fear, be said of many of the outlying dispensaries that they are valuable for the ordinary purposes of a hospital.

TABLE No. 3.

*Showing grade of Officers in charge of Dispensaries.*

| | | 1881. | | 1880. |
|---|---|---|---|---|
| House Surgeon, Dacca ... ... ... | | 1 | | 1 |
| Assistant Surgeons, 1st grade ... ... ... | 4 | | 6 | |
| " 2nd " ... ... ... | 14 | | 12 | |
| " 3rd " ... ... ... | 42 | | 47 | |
| | | 60 | | 65 |
| Medical Graduate of East Indian Railway Service ... | | 1 | | 1 |
| Civil hospital assistants ... ... ... | | 160 | | |
| Native doctors (private practitioners) in charge of 1st class institutions ... ... | | 9 | | 183 |
| Total ... | | 231 | | 250 |

18. It has been usual to regard as satisfactory the growing number of dispensaries in charge of superior medical officers. This, however, has proved on close enquiry to be the reverse of satisfactory, for it has been found in some places that assistant surgeons had been drawing high salaries for work that was insufficient to employ a native doctor of the lowest grade, that in others such an officer was serving only the interests of the richer classes, while paid by government for dispensary work, or, if he were not popular with these classes, was living in idleness and rapidly becoming useless. In such cases the inspection reports have not been at all more favourable to the dispensary management than in the cases of similar dispensaries worked by native doctors. Some beneficial changes of medical officers were made in 1881, and the figures of the above table, though retrograde if measured by the former standard, really show in some degree a juster proportion between work and pay.

TABLE No. 4.

*Inspection by Civil Surgeons.*

| | Daily or frequently. | More than four times. | Four times. | Three times. | Twice. | Once. | Not inspected. | No information received. | Total. |
|---|---|---|---|---|---|---|---|---|---|
| Inspected by Civil Surgeon, 1881 ... | 51 | 4 | 6 | 25 | 82 | 55 | 13 | ... | 236 |
| " " 1880 ... | 51 | 10 | 11 | 26 | 67 | 59 | 24 | 3 | 251 |

19. These figures compare not unfavourably with those of the previous year. Fewer dispensaries were left without inspection, and more were inspected twice at least. It must be observed that some districts where a single visit

only has been paid, have the services of civil surgeons who are among the first in the interest they show in their dispensaries; but the latter are distant and inaccessible, and station duties suffer when long tours of inspection are made. Inspection is becoming more and more useful yearly by the criticism which dispensary affairs receive and the information that is recorded.

TABLE No. 5.

*Numbers of patients treated in 1881 and seven previous years, and ratio per cent. of mortality among in-patients.*

| | In-patients treated. | Out-patients treated. | Total. | Mortality among in-patients per cent. |
|---|---|---|---|---|
| 1874 ... ... ... ... ... ... ... ... | 24,683 | 660,847 | 685,530 | 16·92 |
| 1875 ... ... ... ... ... ... ... ... | 22,753 | 724,144 | 746,897 | 17·1 |
| 1876 ... ... ... ... ... ... ... ... | 23,757 | 829,804 | 853,561 | 16·96 |
| 1877 ... ... ... ... ... ... ... ... | 23,954 | 875,631 | 899,·85 | 17·34 |
| 1878 ... ... ... ... ... ... ... ... | 28,473 | 927,783 | 956,256 | 20·01 |
| 1879 ... ... ... ... ... ... ... ... | 24,847 | 865,995 | 890,842 | 17·78 |
| 1880 ... ... ... ... ... ... ... ... | 23,567 | 888,095 | 911,662 | 15·17 |
| 1881 ... ... ... ... ... ... ... ... | 23,444 | 947,534 | 970,978 | 15·8 |

20. These figures show more work in 1881 than in any previous year in the list; but though, as already stated, fictitious and erroneous returns may be regarded as less general, there are yet enough of them to forbid acceptance of the total as a true record of work. There can be no doubt that if the figures were true throughout and the work were genuine, the excess of 1881 would be larger than it has been made to appear. In some places a clear relation to the public health is established, but this is not common in remote dispensaries, although medical subordinates habitually adapt the public health to their figures, when they think the latter will be considered unfavourable to themselves. It must not be forgotten, however, that in 1881 the number of dispensaries was gradually reduced, and this, taken with the more careful scrutiny of records and the widespread sickness, may sanction a hopeful inference from the larger numbers of sick returned.

TABLE No. 6.

*Total Medical aid afforded by Government in Bengal.*

| | 1880. | | 1881. | |
|---|---|---|---|---|
| | Number. | Patients treated. | Number. | Patients treated. |

21. This table is, for purposes of comparison between districts, useless. Its absolute quantities are so small that it cannot, on this evidence, be said of any district that its medical charities are more or less useful than those of another, while they show beyond doubt how miserably small a fraction of the population resort to them, and that, speaking generally, the people are not moved to value them, even by stress of heavy public sickness. The districts of Midnapore, Nuddea, and Moorshedabad were severely visited by epidemic fever, yet in neither of them did the proportion of dispensary patients rise. The districts of Behar too were extremely unhealthy, and in these alone there was a general, though scarcely appreciable, increase.

| | Burhee | 6·25 |

22. The general death-rate among house-patients of dispensaries, as shown in table 5, was 15·8 per cent., which is nearly the same as that of the previous

year, and is moderate. The figure, however, has no meaning, in consequence of the manner in which the wards of outlying dispensaries are filled. In every instance of high rate recorded the explanation will be found in the notes on particular dispensaries. It is the same as in former years. In one place two or three persons are admitted in extremity of sickness only to die. In another pilgrims form the majority of admissions, that is, those who travel till they are exhausted by illness or fatigue, and take the first gratuitous shelter which is offered them. In a third class the ward is a mere asylum for disabled paupers, and the death-rate is nominal. Thus, whether the recorded figure be large or small, it has no bearing on any point which death-rates are supposed to illustrate.

23. *Cinchona febrifuge.*—The following statement exhibits the sale of cinchona febrifuge in 1881-82, as compared with that of the preceding year:—

TABLE No. 11.

*Sale of Cinchona Febrifuge in* 1881-82.

| Year. | Cinchona Alkaloid. | | | | | |
|---|---|---|---|---|---|---|
| | Quantity sold. | | | Value. | | |
| | lb. | oz. | dr. | Rs. | A. | P. |
| 1881-82 | 323 | 0 | 0 | 5,349 | 0 | 0 |
| 1880-81 | 163 | 9 | 10 | 2,885 | 8 | 3 |

24. The stock sold in 1881-82 largely exceeded the quantity sold in the preceding year, owing to the excessive prevalence of fever in certain districts during the year. Of the 323lbs, 145lbs were sold in Nuddea and Midnapore. The amount realized was Rs. 5,349, against Rs. 2,885 in 1880-81.

25. The system of supplying cinchona febrifuge was changed from 1st April 1881 under the orders of government. All requirements for Bengal are now supplied direct by the government quinologist from the Botanical garden. The reasons for this change were these:—The quinologist supplied this drug to the medical store department at Rs. 16-8 per lb. It was issued again from the store department to civil surgeons and others on indents at a price exceeding the above by 20 per cent. on non-chargeable indents, and 30 per cent. on chargeable indents, or Rs. 19-13-6 and Rs. 21-7-11 per lb, which includes a charge of 7 pie per lb. for the carriage of the drug from the botanical garden to the medical depôt. Again, the febrifuge obtained for sale from the store department was sold to the public at the prescribed rate of Rs. 16-8 per lb by district officers, for which the store department charged Rs. 19-13-6 per lb. In March 1881, a statement was prepared for government showing the quantity of febrifuge issued in 1879-80, in order to ascertain the loss sustained by the Bengal government. It was found that during that period 783lb 2 oz. of cinchona febrifuge were issued from the store department to government institutions and to civil surgeons for sale. The value of this at the quinologist's rate was Rs. 12,921, and the store department charges at Rs. 16-8-10 plus 20 per cent. were Rs. 15,554, or the loss sustained by government amounted to Rs. 2,633. During the year 1881-82 the quantity of cinchona febrifuge issued from the botanical garden to government institutions and for sale was 814lbs., exclusive of the quantities supplied to dispensaries on chargeable indents. The rate of percentage charged by the store department was reduced from 1st April 1881 from 20 to 10 per cent. on non-chargeable indents. Even at this reduced rate this government would have suffered a loss of Rs. 1,346, if the drug in question had been obtained from the medical depôt.

26. *Finance.*—In the supplement to my report for 1880, full information was given under each head regarding the revised form of accounts. I shall confine myself now to the usual remarks on the finances of the dispensaries in the year under report.

27. The following table exhibits the financial operations for the year:—

### Table No. 12—Part I.

*Income.*

| | Rs. | A. | P. |
|---|---|---|---|
| Cash balance on 1st January 1881 ... ... | 67,723 | 9 | 6 |

### Table No. 12—Part II.

*Invested capital.*

| | Rs. | A. | P. |
|---|---|---|---|
| Balance on 1st January 1881 ... ... | 8,36,776 | 15 | 2 |
| Invested during the year ... ... ... | 29,477 | 2 | 10 |
| Total ... | 8,66,254 | 2 | 0 |
| Securities sold ... ... ... | 2,000 | 0 | 0 |
| Deposits withdrawn ... ... ... | 15,833 | 10 | 4 |
| Balance on 31st December 1881 ... | 8,48,420 | 7 | 8 |

28. On the 1st January 1881 there was a cash balance of Rs. 67,723 in hand. The corresponding sum shown in the report for 1880 was Rs. 71,472. The returns from eleven dispensaries closed during the year were not received, and in some cases the incorrect balance previously recorded had been rectified during the year. To these causes mainly the difference may be ascribed. The total receipts from government amounted to Rs. 1,06,384 in 1881, against Rs. 1,30,576 in the preceding year, and Rs. 1,72,434 in 1879. The statements of income anterior to 1879 are not complete. The reductions were due to reasons noticed below under each head of government grant.

29. *Salaries.*—Under this head a reduction of Rs. 14,886 on the grant for 1880, and Rs. 19,732 as compared with 1879, is exhibited. The large number of dispensaries transferred to class I during the year, the readjustment of pay and allowances to medical subordinates, and the closure of useless dispensaries, have caused the reduction of expenditure of government money under this head. It should be observed on the other hand that the government payments towards the salaries of medical subordinates attached to sub-divisions, have shown an increase of more th[illegible] Rs. 9,000 owing to appointment of hospital assistants to the substantive charge of sub-divisions, the corresponding dispensaries paying only their special allowance, and the full grade pay falling on government. Under the old arrangements the dispensaries, in most cases, either paid a moiety of the salary or the full grade pay.

30. *Registers and forms.*—All registers and forms were printed at the jail press and supplied from the stationery office. The cost to government for these forms was Rs. 2,400, against Rs. 2,642 in 1880. In 1879 there was no separate entry exhibiting the cost of forms, the cost of Europe medicines and forms supplied by government having been shown in one total. Considerable savings were effected under the altered method of supply as reported in paragraph 21 of my report for 1880, and in paragraph 18 of its supplement.

31. *Europe medicines.*—All the dispensaries in Bengal paid for their medical stores in 1881, except those that are purely government institutions in class III of the new rules. The cost of medical stores supplied to these amounted to Rs. 272. In 1880 the total cost to government was Rs. 9,534. In 1879 it was Rs. 50,136, which included the cost of forms and registers.

The savings to government in the year under report on account of Europe medicines and forms may be estimated at Rs. 47,463, based on the figures of 1879. There was a money grant of Rs. 2,700 provided in the budget in lieu of medicines for the year 1881-82. In 1882-83 this amount was reduced to Rs. 720.

32. *Diet on police cases.*—The income under this head does not represent a regular government grant, and ought to be excluded from the calculation of ordinary government contribution. The amount paid in 1881 was Rs. 1,163, against Rs. 1,390 in 1880.

33. *Special allowance.*—The income under this head amounted to Rs. 15,038, or Rs. 485 more than that of 1880, and calls for no special remark. In 1879, the amount was Rs. 13,444. The money grants in lieu of medicines are entered under this head, and this has caused the increase in some degree, but most of them will disappear in the accounts of 1882. Special contributions of large sums were drawn in the undermentioned institutions :—

| | Rs. |
|---|---|
| Dacca Mitford Hospital ... ... ... ... | 5,085 |
| Bankipore dispensary ... ... ... ... | 1,964 |
| Pooree „ ... ... ... ... | 1,623 |
| Government institutions ... ... ... ... | 1,030 |
| Gya dispensary ... ... ... ... | 800 |
| Bancoorah „ ... ... ... ... | 727 |
| Burdwan „ ... ... ... ... | 600 |
| Midnapore „ ... ... ... ... | 440 |
| Moorshedabad „ ... ... ... ... | 388 |
| Serampore „ ... ... ... ... | 300 |
| Darjeeling „ ... ... ... ... | 300 |
| Other dispensaries ... ... ... ... | 1,781 |
| Total ... | 15,038 |

Many of these grants have already been withdrawn, and the orders of government were awaited at the end of the year in some other cases.

34. *Income from local sources.*—The total income from local sources amounted to Rs. 2,77,619, against Rs. 2,95,976 in 1880, and Rs. 2,84,878 in 1879, exclusive of the amount realized by sale of securities or withdrawal of deposits. The decrease in the income from "local or other funds" is rather apparent than real, being chiefly due to the transfer of the receipts, which

were erroneously recorded under this head, to that of "subscriptions." The municipal contribution shows an increase of Rs. 4,218 in 1881 on that of the previous year. The interest on investments amounted to Rs. 33,430, against Rs. 32,471 in 1880. Though each individual entry may not correspond with the sum due as reckoned on capital, the amount on the whole may be accepted as correct in relation to the sums shown as invested. It will be observed that, at a rough calculation, the interest on government securities, shown in the additional statement, amounts to Rs. 30,532 at 4 per cent. per annum, which leaves a balance of Rs. 2,898 to be accounted for as proceeds of the other kinds of investments. The practice of including undrawn interest accumulated in the savings bank at the end of the year, as directed in the resolution of government on the report for 1880, was followed in almost all cases. The interest thus shown in 1881 does not represent in every case the interest for the year alone. In some dispensaries the interest accrued from previous years has also been included. In the case of government securities the interest actually drawn has been shown. Here also some discrepancies may be found for reasons noticed in my report for 1880, but in almost all cases full explanation has been furnished to this office. The amount realized by sale of securities or withdrawal of deposits was Rs. 17,942. Of this amount Rs. 2,000 worth of government securities was sold, and the remainder was withdrawn from the savings bank mainly for current expenditure, all receipts being in the first instance deposited in the bank. European subscriptions show a decrease of Rs. 1,680 on those of 1880, when they were Rs. 21,702. Native subscriptions amounted to Rs 1,27,786, against Rs. 1,46,303 in 1880. In 1879 the subscriptions were Rs. 1,30,985. The closure of dispensaries during the year partially accounts for the decrease.

35. *Expenditure.*—The total expenditure amounted to Rs. 3,74,283, or Rs. 28,498 less than that of 1880, exclusive of the amount shown as invested. In 1879 the expenditure was Rs. 4,36,424, exceeding by Rs. 62,141 the expenditure in the year under review. The reduction is chiefly represented in the cost of establishment, which amounted to Rs. 2,40,543, against Rs. 2,65,912 in 1880, and Rs 2,64,288 in 1879. In this, as in other items, the closure of dispensaries operated to a greater or less extent, but the enormous reduction in 1881 was mainly due to the discharge of superfluous servants, and to the readjustment of salaries of medical officers. The expenditure on bazar medicines shows an increase of Rs. 151. On European medicines Rs. 36,114 was expended, against Rs. 25,531 in 1880, but in the latter year Rs. 7,128 worth of medicines obtained from the medical store department had not been paid for. The expenditure in 1881 does not necessarily include payment for that year alone, but in some cases the amount remaining unpaid in the previous year. In 1881 there were instances of bills still due to government and to private druggists, but they were too few to need special notes in the tabular statement. Dietary articles cost Rs. 29,104, against Rs. 33,234 in 1880. The reduction may be ascribed to the cheapness of provisions in 1881. The charges on miscellaneous items show a reduction of Rs. 1,146. The amount expended on buildings was less by Rs. 8,586.

36. *Percentage of cost paid by government.*—Of the entire outlay, government paid 28·4 per cent. in 1881, 32·4 per cent. in 1880, and 39·5 per cent. in 1879. In these calculations the amount invested has been deducted from the total expenditure.

37. *Investments during the year.*—The amount invested does not necessarily represent real invested capital. The deposits in the savings banks being in most cases made in a current account, it is not always possible to distinguish the real from the apparent investments. The amount of so-called investments in 1881 was Rs. 27,478, against Rs. 46,322 in the previous year, when Rs 15,488 and Rs. 5,060 were invested for the Tikaree and Balasore dispensaries, against Rs. 1,164 and Rs. 182 respectively in the year under review. The discrepancies in the amounts shown under this head in statements parts I and II are, as a rule, due to the fact that the former represents actual outlay on investments, while the latter exhibits the par value of investments. The difference in 1881 was mainly owing to the conversion of some *sicca* rupee securities belonging to the Berhampore dispensary,—*vide* foot-note in statement, part II.

38. *Invested capital.*—The amount of invested capital remaining on 1st January 1881 was Rs. 8,36,776. In the report for 1880 the corresponding amount was Rs. 8.83,272, or a difference of Rs. 46,496. The Mozufferpore dispensary had an invested capital of Rs. 50,600 at the end of 1880. This amount has disappeared altogether from the statement, as the dispensary was transferred to the local municipality, and the commissioners credited the entire capital in the municipal accounts, all expenses on account of the dipensary being paid by them and balanced against "income from municipal funds." This procedure has not been followed in dispensaries situated in other municipalities, and I am not aware whether it is or is not strictly correct. It was, however, ascertained that no subscriptions were realized from private individuals during the year for the dispensary at Mozufferpore. In the Jamooo dispensary the invested capital of Rs. 13,400, which belonged to the school and dispensary, was divided. Of this, Rs. 9,900 was allotted to the dispensary, and this has been shown in the accounts. In the statement of accounts of the Midnapore dispensary, the landed property valued at Rs. 9,120, which was previously omitted, has been included in the accounts of 1881. The disappearance of invested capital which remained to the credit of dispensaries closed during the year, and the correction of balances in certain institutions, which was found necessary in the accounts of 1881 have, together with the causes explained above, led to the discrepancy between the balance recorded on 1st January 1881 and that shown in the report for the preceding year. At the end of the year there remained at credit of the dispensaries an invested capital amounting to Rs. 8,48,420, and it was composed as follows:—

| | Rs. | A. | P. |
|---|---|---|---|
| Government securities of 4 or 4½ per cent ... | 7,58,300 | 0 | 0 |
| Government debentures of 5 per cent. .. ... | 2,000 | 0 | 0 |
| Municipal debenture (Calcutta) ... ... | 3,000 | 0 | 0 |
| Landed property ... ... ... ... | 15,120 | 0 | 0 |
| Money lent ... ... ... ... | 7,085 | 0 | 0 |
| In government savings banks ... ... ... | 62,915 | 7 | 8 |
| Total ... | 8,48,420 | 7 | 8 |

## EXTRACT FROM REPORTS OF CIVIL SURGEONS, &c.

### BURDWAN DIVISION.

Burdwan district.

The civil surgeon furnishes an excellent report on the dispensaries of this district, in which he has shown an active interest. The district was unusually unhealthy in 1881. The attendance in all the dispensaries shows some increase in 1881 over that of the preceding year. The number was 36,346 against 32,280 in 1880, with a daily average of 291 and 268. The civil surgeon is satisfied with the accuracy of the figures, and his evidence is good. There were six dispensaries at the end of the year. All the dispensaries are aided by government except Chuckdighee, which is maintained in class I. The dispensaries are said to be appreciated by the people, and the managing bodies devote a fair share of attention to them; but the well-to-do people are not very willing to help them by subscriptions. Three assistant surgeons and three civil hospital assistants were in charge. The Maharajah of Burdwan supports two large dispensaries at Burdwan and Culna under his private management.

*Burdwan.*—A dispensary in class II, transferred to municipality in October last. Government contribution to this dispensary is confined at present to Rs. 50 per mensem, being half the salary of a third-grade assistant surgeon, and to a special allowance of Rs. 600 a year; the latter contribution to be dispensed with on 31st March 1884, when it may be possible to maintain the institution in class I. The first-grade assistant surgeon who was in charge, and whose entire salary was paid by government, was removed during the year. The dispensary establishment was also reduced. There were treated 624 in and 15,705 out-patients, against 541 and 13,715 in 1880. The daily average attendance was 22 in and 94 out, against 23 and 79 in 1880. The increase was chiefly due to larger number of cases of malarious fevers and enlarged spleen treated at the dispensary, which alone account for 58 per cent. of the total treated. There were 179 deaths, or 28·6 per cent., against 28 per cent. in 1880, the increase being due to a larger number of cholera cases treated at the dispensary. There were 65 major operations, resulting in four deaths only. The total income of the dispensary amounted to Rs. 5,546, including the balance, Rs 260, in hand on 1st January 1881, and the total expenditure to Rs. 5,083. It is an useful institution, and the civil surgeon speaks favourably of assistant surgeon Kissoree Mohun Ghose, now in charge. The committee met ten times till October; since then the dispensary affairs have been investigated by the municipality at monthly meetings. The civil surgeon paid daily visits, and the civil officers visited the dispensary several times.

*Culna.*—A second-class dispensary, made over to local municipality on the 29th December 1881. Visited twice by the civil surgeon, and twice by the magistrate. The assistant surgeon in charge has been replaced by a 1st class civil hospital assistant on Rs. 55 a month, of which the government contributes half. In-patients numbered 136 and out-patients 4,191, against 116 and 3,306 in 1880. The daily average number of sick was 4 and 31, against 3 and 22. Malarious fever and its sequelæ were the chief diseases, which account for nearly half the total treated. The death-rate was 11·7 per cent., against 12 in 1880. There were three cases of major and 256 minor operations. The income from local sources in 1881 amounted to Rs. 1,108, including the balance, Rs. 651, in hand on 1st January 1881, against Rs. 1,289 in 1880. The municipality, however, guaranteed the monthly payment of Rs. 120, or Rs. 1,440 a year, on condition of retaining the services of an assistant surgeon, which was refused. This amount is quite sufficient to maintain the dispensary independent of government aid, with a first-class civil hospital assistant in charge. A proper estimate of expenditure is given below:—

| | Rs. | |
|---|---|---|
| Civil hospital assistant ... ... ... | 660 | grade pay. |
| Compounder at Rs. 8, cook at Rs. 4-8, chuprassie and water-carrier at Rs. 5, and sweeper at Rs. 5 ... | 270 | |
| Bazar medicines ... ... ... ... | 25 | |
| Europe „ ... ... ... ... | 80 | |
| Diet ... ... ... ... | 110 | |
| Miscellaneous charges ... ... .. | 80 | |
| Total ... | 1,225 | |

*Chuckdighee.*—A first-class dispensary, supported by the zemindar. An assistant surgeon is in charge The attendance fell from 125 in and 5,047 out-patients in 1880 to 84 and 4,493 in 1881. The daily average sick was 3 in and 19 out-patients, against 4 and 33 in 1880. This large reduction in daily attendance points to the conclusion that the calculation of daily average in 1880 was fallacious, and was rectified in the year under review. There were 13 deaths, against 14 in 1880, or a rate of 15·4 per cent. Fevers were the prevalent diseases. Two major operations of no importance, and 319 minor operations, were performed. Of the total expenditure of Rs. 2,124, the amount expended on establishment was Rs. 1,651.

*Mancoor.*—A second-class dispensary. Orders were issued for its closure in March 1881 after the funds at its disposal should have been exhausted. No in-patients. The number

of out-patients was 4,804, against 4,312 in 1880, with a daily average of 42 and 41. Malarious fever and its consequences, as usual, were conspicuous. There were 8 major and 209 minor operations. The total expenditure amounted to Rs. 634, government contributing Rs. 180, or half the salary of the civil hospital assistant.

*Raneegunge.*—A dispensary in class II, under municipal management. A second-grade assistant surgeon is in charge, whose half salary, or Rs. 75 a month, is paid by government. The dispensary, however, does not afford adequate work for him. The daily attendance was 11 in and 27 out-patients in 1881, against 8 and 19 in the previous year. The number of persons treated was 298 in-door and 2,813 out-door, against 260 and 2,103 in 1880. The death-rate was 38·5 per cent. compared with 41·1 in 1880, moribund pilgrims and travellers chiefly composing the list. There were 22 major and 331 minor operations. The dispensary was twice visited by the civil surgeon, once by the magistrate, and five or six times each month by the assistant magistrate. The total income from local sources was Rs. 2,026, including the balance (Rs. 730) in hand on 1st January 1881. The total expenditure amounted to Rs. 2,569.

*Mahata.*—Orders were issued for the closure of the dispensary in September last. Its continuance was allowed under special circumstances. A petition was presented by the local zemindar offering to defray all the charges, if government would contribute half the salary of the civil hospital assistant. The affairs of this dispensary were under the consideration of government at the close of the year. No in-patients. The total number of out-patients was 3,198, against 2,755 in 1880. The average daily sick was 34 and 32. Minor operations numbered 76. The total expenditure was Rs. 518, of which government contributed Rs. 339. A proposal has since been submitted by the supporter, Baboo Sreenarain Mitter, for the maintenance of the dispensary in class I.

**Hooghly district.**

The report is meagre, as it was in 1880. The prescribed form of report has not been strictly adopted by the civil surgeon. The public health in 1881 was worse than the preceding year. Fever and other diseases of malarial origin were much prevalent. There were six dispensaries in the beginning of the year. Two of these (Sultangachia and Dhuniakholly) were closed on the 1st November and 17th September respectively. The former is maintained independent of government supervision. The civil surgeon says nothing of the trustworthiness of his dispensary figures.

*Emambarah Hospital.*—A first-class dispensary, daily visited by the civil surgeon. An assistant surgeon is in charge. It is under the management of the local agents, Hooghly, the mutwali, and the civil surgeon. The people are said to appreciate the charity. There were 603 in-door and 10,213 out-door patients treated, against 582 and 9,164 in 1880. The daily average attendance was 25 in and 57 out-patients. In 1880 the numbers were 23 and 58. There were performed 32 major and 355 minor operations. The total number of deaths was 123, or 20·3 per cent. The establishment maintained is more than the work demands. The total receipts during the year amounted to Rs. 6,518, and the total expenditure to Rs. 6,506, of which Rs. 3,603 were expended on establishment.

*Boinchee.*—An out-door dispensary in class I, with an assistant surgeon in charge. The number of patients treated was 3,794, against 2,829 in 1880, with a daily average of 30 and 22. For this work, two compounders on Rs. 10 each per mensem are employed. There were one major and 366 minor operations. The dispensary was visited twice by the civil surgeon. It is entirely supported by the widow of late Baboo Behary Lall Mookerjee, who takes great interest in the dispensary. The total expenditure was Rs. 1,986, of which Rs. 1,608 were absorbed by the establishment charges.

*Jehanabad.*—A dispensary in class II. The government, as a special case, allowed an assistant surgeon here, who is medical officer of the sub-division. The attendance is insignificant. There were treated 55 in and 3,110 out-patients, with a daily average of 1·3 and 16. The corresponding figures of 1880 are nearly the same. Seven major and 95 minor operations were performed. The general death-rate was 16·3 per cent. Visited once by the civil surgeon. The committee met five times. The income of the dispensary from local sources rather increased in 1881. Dispensary pays nothing towards the pay of the assistant surgeon. The total expenditure was Rs. 1,882, of which Rs. 1,628 was expended on establishment.

*Dwarbassiny.*—A second-class dispensary, under the management of a local committee, to which fresh members were appointed during the year. The number of out-patients fell from 3,530 in 1880 to 2,796 in 1881. The daily average attendance was 21, against 27 in 1880. Minor operations numbered 158. The civil surgeon visited the dispensary twice. A compounder and water-bearer are needlessly maintained, who should be discharged. The income from local sources is quite sufficient for the legitimate wants of the dispensary, which may be transferred to class I. A report to this effect has been submitted for the orders of government.

**Midnapore district.**

The civil surgeon has furnished a complete and interesting report, showing much critical attention in the work of the district, which had suffered from the long absence of a civil surgeon. Epidemic fever prevailed more or less throughout the district, except in certain parts of the south and west. Cholera and bowel-complaints shewed an increase. There were 11 dispensaries at the beginning of the year, of which the dispensary at Kheerpye was closed on the 28th June. The Golegram dispensary was removed from government supervision, and is maintained as a private institution by Maharajah Sir Joteendra Mohun Tagore for the benefit of his tenants. Three dispensaries were made over to municipalities, and two transferred to class I during the year. The total attendance shows a reduction on that

of 1880. The civil surgeon is not satisfied with the figures of the year, but thinks them much better than those of previous years, which had been quite fallacious. He notices especially the reduction of averages under a proper method of reckoning.

*Midnapore.*—A dispensary in class II, transferred to municipality during the year. An assistant surgeon is in charge, whose entire salary was paid by government. Reductions of useless servants were effected. There were treated 507 in and 11,144 out-patients, against 494 and 10,295 in 1880. The daily attendance was 21 and 90, against 24 and 95. Closer compliance with the orders about recording attendances and calculating daily averages, led to a reduction of the daily average, though a large increase in the total treated has been exhibited. In addition to these patients, a daily average of 6·6 paupers were lodged in the alms-house maintained under the terms of the Pearce endowment, and there fed and clothed. The death-rate among in-patients was 34·9 per cent., against 27·7 in 1880. Of the 177 deaths, 69 occurred in pilgrims, 17 deaths were due to cholera, and 82 to dysentery and diarrhœa. The practice of operative surgery has progressively increased during the past few years. There were 61 major and 518 minor operations in 1880. The income during the year was Rs. 4,632, of which government contributed Rs. 1,628. The total expenditure amounted to Rs. 4,067. Rs. 637 represent the outlay on miscellaneous items, which include the money and clothing distributed to paupers. A sum up to Rs. 2,000 has been fixed to be expended on building a house for the resident surgeon. The dispensary was visited in September last by His Honor the Lieutenant-Governor and by the surgeon-general. The civil surgeon visited almost daily, and the magistrate seven times.

*Mysadul, or Ruthgerah Bazar Dispensary.*—A first-class dispensary, under the court of wards, supported from the Mysadul estate. It is managed by a local committee of six members, who met 15 times during the year. An assistant surgeon is in charge. 86 in and 2,628 out-door patients were treated, against 62 and 2,239 in 1880. The daily attendance was 3·7 and 28, against 2·9 and 32. The increase is attributed to the popularity of the present medical officer. The death-rate was 9·3 per cent. among in-patients. Seven major operations were performed. The total expenditure amounted to Rs. 1,833. The dispensary was visited once by the sub-divisional officer, and twice by the civil surgeon.

*Contai*—Transferred to class I. The assistant surgeon has been withdrawn and the civil hospital assistant of the sub-division put in charge, who receives Rs. 10 per mensem from dispensary fund. The number of out-patients fell from 4,248 in 1880 to 1,556 in 1881. The apparent decrease was due to the inclusion in 1880 of old as well as new cases; that is to say, the figures represented attendances, not persons, while in 1881 new cases have only been shown. The daily average sick was 13, against 11 in 1880. Contai was not affected by the fever epidemic prevalent elsewhere. Sixty-seven minor operations were performed. The income during the year was Rs. 510, of which Rs. 434 was expended. The dispensary is managed by a local committee, who met 11 times. It was visited once by the magistrate, the sub-divisional officer, and the district superintendent of police. The civil surgeon paid one visit. He was prevented from paying a second visit by sickness in the station.

*Ghattal.*—A dispensary in class II, transferred to municipality in July. It has been proposed to transfer the dispensary in class I, and the orders of government were awaited at the close of the year. The in-door ward has been closed, but a room in the dispensary is set apart for the accommodation of occasional sick travellers. The attendance increased from 4,487 out-patients to 4,774 in 1881. The daily average was 36 and 40 respectively. Forty-nine house-patients were treated, with 13 deaths, or 26 per cent. Nine major and 235 minor operations were performed. The income during the year was Rs. 1,242, of which Rs. 314 was contributed by government. The total expenditure amounted to Rs. 1,222. The dispensary was visited twice by the magistrate, once by the sub-divisional officer, and twice by the civil surgeon. The institution has since been placed in class I, government paying the grade pay of the hospital assistant and the dispensary an extra allowance of Rs. 10 a month.

*Tumlook.*—Made a sub-divisional dispensary in class I in December last, the civil hospital assistant receiving his grade pay from the sub-division, and an allowance of Rs. 10 from the dispensary fund. The dispensary is managed by the local municipality, in whom it has been formally vested. The committee met six times. The sub-divisional officer visited the dispensary on the occasion of the committee's meetings. The civil surgeon paid two visits. There were treated 29 in and 4,082 out-patients, against 36 and 4,204 in 1880. The daily average attendance was 2 5 and 37, against 2·5 and 39. The decrease is apparent only; attendances in 1880 were wrongly recorded. The in-door ward was closed in July 1881. The town was fairly healthy. Six major and 347 minor operations were performed. The income during the year was Rs. 915, of which government contributed Rs. 239, and the total expenditure amounted to Rs. 698. The financial condition of the institution is good, and considerable savings will now be effected, as the dispensary, which formerly paid the grade pay of the native doctor (Rs. 35), will have to pay Rs. 10 only under the new classification.

*Chunderkona.*—A dispensary in class II, originally established as an epidemic fever dispensary. It is under the management of the municipal committee, who meet monthly. No visit was paid by any magisterial officer; the civil surgeon visited twice. The attendance rose to 4,937 out-patients from 4,448 in 1880. The daily average sick was 62 and 48. The town and neighbourhood suffered greatly from fever. The compounder and cooly were discharged

during the year, but the services of the former have been engaged as a temporary arrangement owing to the increased attendance. Two major and 74 minor operations were performed. The income during the year was Rs. 673, of which government contributed Rs. 170, and the total expenditure amounted to Rs. 643.

*Narajole.*—A dispensary in class II, government contributing Rs. 180, or half the salary of the civil hospital assistant. It is managed by a local committee, who met only four times. The compounder has been discharged, and the civil surgeon says that the "dispensary has got on very well without him." The total number of patients treated out-door was 3,136, against 3,076 in 1880, with a daily average attendance of 28 and 31. One hundred and ninty-nine minor operations were performed. The local receipts amounted to Rs. 683, of which government contributed Rs. 192, including the cost of forms. The amount expended during the year was Rs. 623. The local income is sufficient for the maintenance of the dispensary independently of government aid. The dispensary was visited once by the magistrate, and twice by the civil surgeon.

*Dantoon.*—A second-class dispensary, under a local committee, who met ten times. The special government grant of Rs. 60 in lieu of medicines ceased from October, and the compounder was discharged under the orders of government. The attendance was 3,358 out-patients, against 3,403 in 1880, with a daily average of 20 and 21. Fever is said to have prevailed epidemically, but the dispensary attendance has not been affected. Thirty-four minor operations were performed. Subscriptions have fallen off by nearly Rs. 100, and the committee have several times found it difficult to meet monthly expenditure, and a collapse of the institution is threatened. The income from private sources amounted to Rs. 426. Government contributed Rs. 222, and the total expenditure was Rs. 648. The civil surgeon visited the dispensary once.

*Gurbetta.*—A dispensary in class II, under the management of a local committee, who met 11 times. It is situated on the pilgrim route between Raneegunge and Bancoorah and Midnapore. The special government grant in lieu of medicines has been withdrawn. The guaranteed income of Rs 40 fell short, and arrears of subscriptions are heavy, though the local zemindars, Messrs. Watson and Co., pay 62 per cent. of the subscriptions. 5,508 out-patients were treated, against 6,784 in 1880, with a daily average of 35 and 39. The decrease is apparent only as in 1880 and until August 1881, the attendance was calculated on the days for which medicines were supplied. 30 in-patients were treated before the ward was closed. Six major and 181 minor operations were performed. The income of the dispensary during the year was Rs. 635, of which government paid Rs. 241. The total expenditure amounted to Rs. 622. The magistrate and the district superintendent of police each visited the dispensary once, and the civil surgeon paid two visits.

*Kheerpye.*—Up to the end of June, when the dispensary was closed, 1,832 patients were treated out-door. The daily average attendance was shown as 44, or each patient attending the dispensary four times during six months.

*Golegram.*—Before the institution was removed from government supervision, 1,302 out-patients were treated, and the recorded daily attendance was 16.

**Beerbhoom district.**

The year under report was exceedingly unhealthy; fever raged in an epidemic form throughout the district from September to December, the number of recorded deaths amounting to 21,611, against 13,028 in 1880. The deaths from other causes were as usual. There were four dispensaries in the beginning of the year. The dispensary at Rypore was closed in June last. Relief was afforded by distribution of medicines and deputation of special medical subordinates. The civil surgeon is satisfied with the returns, and says the dispensaries are popular.

*Soory.*—A dispensary in class II, government contributing Rs. 360 a year towards the pay of a first-class civil hospital assistant. Since June the dispensary was taken over by the municipality. The in-door ward was ordered to be closed and the establishment reduced. On further representation, however, the retention of the in-door ward and the re-employment of the cook and bheestie, were sanctioned by government. An extra compounder was employed for three months at Rs. 5 during the fever season. 73 in and 12,819 out-patients were treated, against 73 and 8,978 in 1880. The daily average sick was 2·3 in and 120 out-patients, against 2·5 and 87. The increase in out-patients was due to the unusual prevalence of fever. There were 11 deaths among in-patients, or 15·06 per cent. Fever and its complication were the chief diseases treated. 30 major and 275 minor operations were performed. The income from private sources amounted to Rs. 1,190, and the total expenditure was Rs 1,722. The dispensary was visited four times by the magistrate, and daily by the civil surgeon.

*Rampore Hât.*—A dispensary in class II, government pays Rs. 300 per annum to the railway assistant surgeon, and a similar contribution is made from the dispensary funds. Railway servants are chiefly treated here. It has been ordered that the dispensary is to remain in its present footing. 136 in and 4,153 out-patients were treated, against 98 and 3,544 in 1880. The daily average sick was 4 and 26, against 2·7 and 21. There were 7 deaths, or 5·1 per cent. The small percentage of deaths was due to a larger number of railway servants being treated for ordinary complaints. The income during the year was Rs. 1,284, of which government contributed Rs. 308, and the total expenditure was Rs. 1,284. The committee met eight times, and the dispensary was visited thrice by the civil surgeon. Three visits were paid by the civil officers of the district.

*Hetampore.*—A dispensary in class II, government contributing Rs. 180 a year, or half the salary of the civil hospital assistant. It is managed by a local committee, who held no meetings during the year. 6,942 out-patients were treated, against 4,630 in 1880, with a daily average of 78 and 56, the increase being due to the prevalence of fever. 282 minor operations were performed. The civil hospital assistant is said to be fairly attentive to his work, and enjoys the confidence of the people, but is deficient in surgery. The income during the year was Rs. 701, of which Rs. 188 was paid by government including the cost of forms. The total expenditure amounted to Rs. 796. The dispensary is chiefly supported by Raja Ram Runjun Chuckerbutty Bahadoor of Hetampore. In commissioner's letter to government No. 586, dated 27th December 1880, the Raja expressed his willingness to pay Rs. 300 annually in addition to his present yearly allowance of Rs. 400 to provide for charges of Europe medicines. With this income of Rs. 700 and a local contribution of (say) Rs. 120, the dispensary can well be managed without any aid from government. The civil surgeon visited the dispensary twice; the civil officers paid no visits.

**Bankoora district.**

A full and clear report has been submitted by the civil surgeon, covered by a very interesting letter from Mr. Anderson, the magistrate, reviewing the working of the dispensaries and the general state of health of the district. The year under report was much unhealthier than the preceding year, the fever being excessively prevalent owing, it is said, to the exceptionally heavy rains of the last two years. There are four dispensaries in the district, the sudder dispensary receiving both in-door and out-door patients. Special deputation of medical subordinates was made to fever-stricken localities. The total attendance in the dispensaries has not, however, increased much during the year, being 273 in and 14,527 out-patients, against 261 and 13,188 in 1880. It should be observed, however, that the returns of 1880 had been closely checked by both magistrate and civil surgeon, so that an increase of genuine work may be inferred. The local officers have confidence in the figures of 1881, and this is sufficient ground in Bankoora for accepting them as correct. Mr. Anderson, the magistrate, shewed in 1881 the same warm and active interest, as in previous years, in sanitary work and dispensary management, supporting and supported by the zealous efforts of his civil surgeon.

*Bankoora.*—A dispensary in class II, under the management of the municipality. The in-door and out-door wards, which were quarter of a mile apart from each other, were brought together during the year. This measure, the magistrate says, has added to the popularity of the dispensary, and has led to reduction in expenditure. 273 in and 4,654 out-door patients were treated in 1881, against 261 and 5,473 of the previous year. The decrease is said to be apparent only, as attendance by friends was excluded from the figures of 1881 under recent orders. It is not clear why this should affect total numbers. Unless successive visits of friends had been entered before as those of separate persons, the changes should affect averages only. The death-rate among in-patients was 18·6, against 16·8 in 1880, moribund pilgrims largely figuring among them. Separate accommodation for the admission of pilgrims has been proposed. 58 major and 756 minor operations were performed. Government payment to this institution was confined to half salary of the civil hospital assistant, or Rs. 300 a year, and special allowances of Rs. 627 and Rs. 100. The latter contribution, which was in lieu of medicines, was withdrawn in May 1881. The special allowance of Rs. 627 has also ceased from 1st April 1882. The income during the year was Rs. 1,771, of which government contributed Rs. 1,112. The total expenditure was Rs. 1,838. The affairs of the dispensary are considered at the monthly municipal meetings. The civil surgeon visited the dispensary daily when in the station, the commissioner once, and the district magistrate seven times.

*Bishenpore.*—A dispensary in class II, government contributing half pay of the civil hospital assistant, who has passed the professional examination of the first-grade in October last. In November the management and control of the dispensary were vested in the municipality. The special allowance of Rs. 60 in lieu of medicines has been withdrawn, and the establishment of an in-door ward, which was previously disallowed, has been sanctioned by government. The dispensary was inspected twice by the magistrate and four times by the civil surgeon. 4,932 out-patients were treated, against 3,458 in 1880, the daily average being 41, against 34. 15 major and 261 minor operations were performed. The income from local sources amounted to Rs. 488, and the total expenditure to Rs. 734, of which government contributed Rs. 331. Eleven meetings were held during the year

*Maliara.*—A dispensary in class II, government contributing Rs. 240 a year towards the pay of the civil hospital assistant. It is of nominal usefulness now, the daily attendance being 17, against 16 in 1880, and is managed by a local committee, who take little interest in it. Three meetings were held during the year, and the civil surgeon is of opinion that the committee should be reconstituted. A compounder and water-carrier are needlessly maintained. The income from local sources fell from Rs. 738 in 1880 to Rs. 500 in 1881, nevertheless the amount is sufficient for the maintenance of the dispensary in class I without government aid. The total expenditure amounted to Rs. 640, of which Rs. 568 represent charges for establishment, and Rs. 72 for all other requirements. The dispensary was visited twice by the district magistrate and five times by the civil surgeon.

*Ajoodhya.*—A second-class dispensary, under a local committee, who met four times during the year. It is of very little use to the public, and maintained chiefly for the benefit of the zemindars, who represent the committee. The number of out-patients treated in 1881 was 2,373, against 2,186 in the preceding year, the daily averages being 13 against 12. The civil hospital assistant in charge has been unfavourably reported on, and the dispensary, it is

said, has suffered in popularity under him. 1 major and 181 minor operations were performed. The private income of the dispensary fell from Rs. 520 in 1880 to Rs. 500 in 1881, which is enough for its maintenance independently of government aid. The compounder has been discharged. The total expenditure amounted to Rs. 477, of which Rs 395 was for establishment, and Rs. 82 for all other charges. The dispensary was visited twice by the magistrate, and five times by the civil surgeon. The institution may pass into class I.

**Serampore sub-division.**

The sickness and mortality in the sub-division were somewhat higher in 1881 than the two preceding years. The Serampore hospital was placed in class I in June last, and the Connagore dispensary was closed under the orders of government. Four dispensaries remained at the close of the year; of these, three are managed by municipalities, and one by a local committee.

*Serampore.*—Placed in class I in June last by the withdrawal of government contribution of Rs. 50 per mensem. The hospital is under the immediate charge of the civil medical officer, who visits it twice daily, and oftener when required. The district magistrate visited once, and the sub-divisional officer paid several visits. 452 in and 4,473 out-patients were treated, against 417 and 3,927 in 1880, the daily average being 13 and 36 in 1881, against 15 and 33 in the previous year. The deaths were 27·2 per cent., against, 29·9 in 1880. The number of deaths from cholera was much larger in the past year than in 1880. The pilgrims or starving up-country people, who come for employment in the jute-mills, chiefly form the mortality. 16 major operations, which were chiefly for mill injuries or railway accidents, were performed. The dispensary is under the management of the Serampore municipality, who meet regularly every month, and oftener when required. The income of the dispensary, including Rs. 323 received from government, was Rs. 2,380, and the total expenditure was Rs. 1,957.

*Rishra.*—A second-class dispensary, under the management of the Serampore municipality. The dispensary is of nominal usefulness, and is situated close to Serampore. The income of the dispensary, which was much in arrears, has been placed on a satisfactory footing through the influence and exertion of the sub-divisional officer. The number treated during the year was 2,716 out-patients, with a daily average of 21, against 2,617 and 23 in 1880. 146 minor operations were performed. The income of the dispensary from private sources was Rs. 596. This amount is more than sufficient for the maintenance of the institution in class I. Government aid is not required. The dispensary was visited several times by the civil surgeon.

*Bundipore.*—A dispensary in class II, under the management of a committee, by whom three meetings were held during the year. The number of patients treated shows an increase of 542 on that of 1880, the daily average attendance being 29 in 1881, against 20 in the previous year. 75 minor operations were performed. The income of the dispensary, which was Rs. 480 from local sources, is quite sufficient for its maintenance independently of government aid. The civil hospital assistant may be paid his grade pay only, and the total expenditure, on a reasonable estimate, would amount to Rs. 371. The dispensary may be placed in class I. The government contribution is confined to half the salary of the native doctor, or Rs. 180 a year. The dispensary was inspected twice by the civil surgeon and the district magistrate, and the sub-divisional officer paid one visit.

*Boidobatty.*—A second-class dispensary, under the local municipality, government contributing Rs. 180 a year, or half the salary of the civil hospital assistant. It was visited several times by the civil medical officer. There were 3,991 out-patients treated in 1881, against 3,505 in 1880, with a daily average of 29 and 26. Minor operations numbered 233; no major operation. The private funds of the dispensary are quite sufficient for its support without government aid, and a report to that effect has been made to government in the current year.

**Howrah district.**

*Ooterparrah.*—A second-class dispensary. Government contributes the full salary of a second-grade assistant surgeon, or Rs. 1,800 per annum. This is the only dispensary in this district. In the civil list Ooterparrah is included in the Hooghly district. There were treated 280 in and 3,252 out-patients, against 283 and 3,715 in 1880. The daily average attendance was 11·3 in and 23·6 out-patients, against 11·6 and 31·8 in 1880. Four major and 377 minor operations were performed. The income of the dispensary was Rs. 3,752, of which government contributed Rs. 1,821. The total expenditure amounted to Rs. 3,643, of which Rs. 2,546 represents the cost of establishment. The case of this dispensary was under the consideration of government at the close of the year. Subordinate establishment is maintained at a monthly cost of Rs. 55, which is considerably more than the charity requires. The sub-divisional officer of Serampore and the civil surgeon each visited the dispensary once.

## Presidency Division.

**District of 24-Pergunnahs.**

The report was submitted very late, viz. on the 29th April. It is, however, very complete, and abounds in useful criticism. The general health of the district in the year under review compared favourably with that of the preceding year. There were occasional outbreaks of cholera, but no epidemic. There are 18 dispensaries in the district, of which nine receive both in and out-patients. Seven dispensaries were transferred to class I during the year. At the end of the year there were 8 dispensaries in class I and 10 in class II. The total number daily treated in all the dispensaries was 663, against 896 in 1880. The civil surgeon does not regard with much confidence the figures of the dispensaries, except those of the Alipore, Bhowanipore, North and South Suburbs, Russa, and Baraset. Seven dispensaries are

in charge of assistant surgeons, and 11 are under civil hospital assistants. The municipalities controlled six dispensaries, the local committees 11, and one was under private management. Dr. Jackson thus records his experience of the interest taken by the local committees, which is reproduced *in extenso* :—

"So far as my experience goes I see little or no interest manifested by local committees in what can be called the working of the dispensaries. They meet, pass the accounts, and the proceedings of one meeting are exactly like those of another. The meetings take place at a time when the dispensary is closed. I have seen no instances of the committee even interesting itself in the care of government property and instruments, in seeing the rules regarding the separation of poisons carried out, or in ensuring cleanliness." He adds :—"I think committees too prone to consider the dispensary as an institution especially designed for their own and their friends' use. They like to be in friendly terms with the medical officer in charge, and if he is subservient and attentive to them, and does not attach himself to some obnoxious family or get involved in petty local jealousies, he secures immunity from supervision and criticism, creates friends and partizans, who will secure him from punishment or oppose his transfer to the utmost, and the poor and their interest are altogether ignored. In fact, not unfrequently members of a committee lounge into a dispensary for a morning chat, and sit with the medical officer discussing their own private affairs, while the poor are waiting unattended to inside."

The civil surgeon also points out the inconvenience attending the committee meetings being held outside the dispensary building, and the keeping of committee and account books in the house of the secretary. As regards the appreciation of the dispensaries by the people, Dr. Jackson says "that in some places there is little or *no* appreciation of these, and resident *poor* never approach except in case of accident or injury." In the larger institutions, however, "sick-people generally resort to them for severe ailments as a matter of course."

*North Suburban Dispensary.*—A second-class dispensary, under the management of a local committee of European and native gentlemen. Five meetings were held. Inspected once each by the magistrate, joint-magistrate, and vice-chairman of the suburban municipality. The civil surgeon paid two visits during the year. A third-grade assistant surgeon is in charge, and government pays Rs. 1,200 a year, or the full salary of the medical subordinate. Many of the superfluous servants employed in the dispensary were discharged during the year. There were treated 632 in and 4,325 out-patients, against 654 and 4,418 in 1880; the daily average being 32 and 34, against 34, and 36. The death-rate, including moribund cases, was 7·7 per cent, against 10·5 and 8·3 in 1880 and 1879. This shows a great improvement. A fair amount of good work in operative surgery appears to have been done, and the results as recorded are most creditable to the assistant surgeon. There were performed 106 major operations—many of them were important—against 37 in 1880. These were all successful, except a case of multiple fracture, which terminated fatally. In the Mitford hospital and the Temple medical school, the number of major operations performed was 168 and 80 respectively. Minor operations numbered 562, against 328 in 1880. The income of the dispensary from local sources was Rs. 4,980, and from government Rs. 1,249. The total expenditure was Rs. 4,429. The local income of the institution is more than sufficient for its maintenance in class I independently of government aid. This is an useful institution, and the civil surgeon on the whole was satisfied with its working.

*Barisha.*—A second-class dispensary, under the management of the municipality since June last. Seven committee meetings were held during the year. The civil surgeon inspected twice. A second-grade assistant surgeon is in charge, who receives Rs. 90 from government, and Rs. 60 from dispensary fund. The civil surgeon is not satisfied with the working of the medical subordinate, and attributes the small attendance to inattention on his part. 125 in and 5,455 out-patients were treated, against 4 and 5,088 in 1880; the daily average being 3 and 37, against 0·1 and 36. The in-door ward was opened in December 1880. There were 8 deaths among in-patients. 18 major operations were performed; 17 of them were either reductions of dislocations or setting of fractures—a statement which condemns itself. Minor operations numbered 412. The total expenditure was Rs. 3,182, whereof Rs. 2,439 was expended on establishment, and Rs. 380 on buildings. Government paid Rs. 1,432, and Rs. 1,459 was paid by the municipality. There is no work for an assistant surgeon, who should be replaced by a hospital assistant.

*Bhowanipore.*—An out-door institution in class II of the new rules. It was under the management of a local committee throughout the year, which met only once. Orders were issued in September last transferring the dispensary to the suburban municipality. A second-grade assistant surgeon was in charge, who was paid his full grade pay, Rs. 150 per mensem, by government to 5th September last, after which the dispensary contributed Rs. 60 towards his salary. The civil surgeon paid two formal visits. 9,288 out-patients were treated with a daily average of 66, against 10,540 and 89 respectively in 1880. The decrease in attendance is ascribed to the exceptionally good state of the public health. As usual, fevers head the list of diseases treated. Minor operations numbered 624, against 837 in 1880; no major operation. The total expenditure was Rs. 2,376, whereof Rs. 2,148 was expended on establishment. Government paid Rs. 1,628, and the municipality paid Rs. 800. At the end of the year there was a cash balance of Rs. 755, and an invested capital of Rs. 5,800 in government securities. The dispensary is popular, and is said to be especially useful to, and sought by, the poor.

*Alipore.*—A second-class dispensary, managed by the municipality. Visited almost daily by the civil surgeon. A third-grade assistant surgeon is in charge, who receives his grade pay, Rs. 100 per mensem, from government. There were treated 183 in and 4,038 out-patients, against 238 and 4.740 in 1880; the daily average being 6 and 25, against 9 and 36. Forty-four major operations were performed. The total expenditure was Rs. 1,956, of which Rs. 1,663 was expended on establishment. The amount paid by government was Rs. 1,223. The municipality paid Rs. 733.

*Russapugla.*—A first-class dispensary, supported by private endowments. It is under the management of a committee, who held 12 meetings during the year. Visited once by the magistrate, twice by the judge, and ten times by the civil surgeon. A third-grade assistant surgeon is in charge, who receives his grade pay from the dispensary and an extra allowance of Rs. 50 per mensem from the Political department, Government of India, for medical attendance on the Mysore family. The civil surgeon reported unfavorably on the medical subordinate for neglect of duty, and he has been removed from the charge. 147 in and 6,494 out-patients were treated, against 271 and 6,954 in 1880; the daily average being 15 and 87, against 12 and 62. The falling off in house-patients was due to the fact that for three months the dispensary was under repairs, when no new patients were admitted. 27 persons died, or 18 per cent., against 15 per cent. in 1880. Dysentery was most fatal. 25 major and 300 minor operations were performed, against 26 and 523 in 1880. The total expenditure was Rs. 6,927, of which Rs. 3,287 was expended on buildings, and Rs. 2,012 on establishment. At the end of the year there remained a cash balance of Rs. 4,459, and an invested capital of Rs. 132,000 in government securities.

*Baraset.*—A second-class dispensary, under a committee, which met twelve times during the year. Visited once by the magistrate, nine times by the sub-divisional officer. The civil surgeon paid one visit. Baraset is a sub-division. Government contribution was confined to Rs. 1,800 a year, or the full salary of a second-grade assistant surgeon, who is in charge. The dispensary has since been placed in class I, and the assistant surgeon will receive Rs. 25 per mensem from the dispensery fund for his services in the dispensary. He is also in charge of the sub-division and jail. There were treated 117 in and 4,190 out-patients, against 114 and 4,214 in 1880; the daily average being 5 and 31, against 4 and 36. The death-rate was 8 5 per cent., against 7·8. Most of the deaths are said to have been among old men in the last stage of emaciation from dysentery and dropsy. 40 major operations, mostly fractures and dislocations and opening of abscess, and 322 minor operations, were performed, against 27 and 327 in 1880. The total expenditure was Rs. 3,049, of which Rs. 2,315 represents the cost of establishment, and Rs. 242 was expended on buildings. A compounder on Rs. 15 and a dresser on Rs. 8 per mensem were employed, and orders have since been issued by government to appoint a compounder on Rs. 8 in their place. The invested capital at the end of the year was Rs. 1,130.

*Nowabgunge or North Barrackpore.*—Transferred to class I on 1st November. The dispensary is under the management of the municipality. Twelve meetings were held. Once inspected by the civil surgeon. A civil hospital assistant is in charge. 2,519 out-patients with a daily average of 23 were treated, against 2,678 and 28 in 1880. Minor operations numbered 155; no major operation. The dispensary was removed during the year under report, which in some degree accounts for the falling off in attendance. The total expenditure was Rs. 644, whereof Rs. 542 represents the cost of establishment. Government paid Rs. 165, and Rs. 400 was paid by the municipality.

*Khordah or South Barrackpore.*—Transferred to class I on 1st November. The municipality manage the dispensary. Twelve meetings were held. The civil surgeon paid one visit. The civil surgeon speaks unfavorably of the hospital assistant who was in charge. The superfluous compounder and dresser were discharged during the year. There were treated 1,978 out-patients, against 1,871 in 1880; the daily average being 28 and 26 respectively. 252 minor operations were performed. The civil surgeon has little faith in the attention of the sub-divisional medical officer, or in his returns. The total expenditure was Rs. 835, of which Rs. 599 was expended on establishment, and Rs. 138 on Europe medicines. Government paid Rs. 173, and Rs. 600 was paid by the municipality.

*Naihati.*—A second-class dispensary, managed by the municipality. Seven meetings were held. The civil surgeon paid one visit. A hospital assistant is in charge, who is paid Rs. 300, or half the salary by government. 4,685 out-patients were treated, against 4,144 in 1880; the daily average being 40, against 55. Six major and 171 minor operations were performed. The total expenditure was Rs. 1,118, whereof government paid Rs. 282. The income from local sources was Rs. 958. The dispensary has since been placed in class I.

*Bistopore.*—A second-class dispensary, governed by a local committee, which met six times. Government contributed Rs. 480 a year, or the full salary of the hospital assistant, to 5th September 1881. Orders have since been issued for the payment of half the pay of the hospital assistant from the dispensary fund. The final orders of government on the re-classification of this dispensary were awaited at the end of the year. The civil surgeon paid no visit, the dispensary being difficult of access. The recorded number of attendants was 2,550 out-patients, with a daily average of 41, against 2,378 and 48 respectively in 1880. Each patient therefore attended six times during the year. The daily average is said to have been correctly calculated excluding represented persons. 52 major operations were returned; of these no less than 38 were for dislocations—which is absurd—viz. 2 jaws, 4 shoulder, 15 elbow, 15 wrist, and 2 foot. The civil surgeon disbelieves

them entirely, and distrusts also the other returns. 402 minor operations are said to have been performed. The hospital assistant will be removed from the charge. The hospital assistant reports the trial of sulphuric acid as a prophylactic in cholera. "Three cases out of five proved successful," he says. The total expenditure was Rs. 673, of which Rs. 607 represents the cost of establishment. The cost of medicines purchased in 1881 was not paid during the year. A compounder and dresser, costing Rs. 17 per mensem, are needlessly maintained. Government paid Rs. 434. The local income of the dispensary, which was Rs. 540, should be quite sufficient for legitimate expenses. Orders have since been issued that government aid will be continued on condition that the scale of establishment proposed by the surgeon-general is adopted.

*Bussirhat.*—A sub-divisional dispensary, transferred to class I on 5th September 1881. The dispensary is managed by a local committee consisting of the sub-divisional officer, two moonsiffs, and 4 municipal commissioners, who are said to take no interest in the institution. The committee, however, met 12 times. The civil surgeon paid one visit. Dr. Jackson remarks that "it is a most insignificant dispensary in a poor, dilapidated building, and avoided by all the residents, who prefer to seek aid from private practitioners. It is from non-resident people from a distance, who come to the cutcherries on business, that the attendance is made up. It seems a waste of time to spend two days in a ticca-gharry over such a place." The district magistrate inspected twice, and the sub-divisional officer once. A hospital assistant is in charge, who received, after the change of status of the institution, Rs. 10 per mensem from the dispensary fund and his grade pay from government for the charge of the sub-division. One in and 1,175 out-patients were treated, against 1 and 1,208 in 1880; the daily average in out-patients being 11, against 13. One major and 131 minor operations were performed. The total expenditure was Rs. 434, of which government paid Rs. 96; the municipality paid Rs. 310.

*Taki.*—A dispensary in class II, under a local committee, which met 11 times. Visited twice by the sub-divisional officer, and once only by the civil surgeon. The place is remote and hard to get at save by water. A civil hospital assistant was in charge, who was unfavorably reported on, and has since been removed. 1,627 out-patients were treated, against 1,613 in 1880; the daily average being 30 and 38. The civil surgeon doubts the accuracy of the returns. He states that "I found that while the books showed a daily attendance of 32 and 35, the unfinished entry of the previous day showed 8 names only and 15 serial numbers, the last seven of which were blank. These and 15 more would doubtless have been filled up with names eventually." Three major and 296 minor operations were recorded. The total expenditure was Rs. 920, of which government contributed Rs 467. The income from private sources was Rs. 743.

*Goberdanga.*—Transferred to class I since June 1881, Baboo Girija Prosunno Mookerjee undertaking to maintain it entirely at his own expense. Visited once by the sub-divisional officer and once by the civil surgeon. 9 in and 3,752 out-patients were treated, against 7 and 2,647 in 1880; the daily average being 0·3 and 38, against 0·1 and 31. Two deaths occurred among 9 in-patients, and they are described as those of persons moribund on admission. 13 major operations were performed, and the civil surgeon remarks that "it is remarkable that while elbow dislocations are so common at Bussirhat, Taki, and Bistopore, Goberdanga have none of them." Minor operations numbered 362. The total expenditure was Rs. 1,498, whereof Rs. 1,206 was expended on establishment. Government contributed Rs. 181, and the municipality paid Rs. 150.

*Satkhira.*—A second-class dispensary, under the management of the local municipality from 25th February 1881. 14 meetings were held. Visited once by the commissioner, and twice by the district magistrate. The civil surgeon paid no visit. He did his best to inspect the dispensary, and was within six miles of it when he was prevented from proceeding further by unavoidable reasons. An assistant surgeon is in charge, who receives Rs. 60 from government and the same amount from dispensary fund. The place does not afford work for him; it is a suitable charge for a hospital assistant. There were treated 129 in and 2,036 out-patients, against 134 and 2,008 in 1880; the daily average being 6 and 18, against 4 and 15. The death-rate was 6 9, against 5·2. It is said that the place is the "hot-bed of fever," but on'- 497 fever cases were treated. This indicates either that there is much exaggeration about this fever, or that people have little faith in the dispensary. Two major and 1·9 minor operations were performed. The total expenditure was Rs. 2,302, of which Rs. 1,817 was expended on establishment, and Rs. 208 on buildings. Government paid Rs. 733, and Rs. 910 was paid by the municipality. The assistant surgeon has since been withdrawn, and a first-class hospital assistant appointed to the dispensary and sub-division, and the dispensary placed in class I.

*Harinavi.*—A dispensary in class II, governed by a local committee, which is said to evince little interest in the institution. Eleven meetings were held. The civil surgeon visited once, the "result of four different attempts to go there." A hospital assistant is in charge. Government had paid the full salary of the medical subordinate, but in September last orders were issued that half the salarly should only be paid. 7,350 out-patients were treated, with a daily average of 42, against 7,843 and 87 respectively in 1880. The difference in the daily average is enormous, and is ascribed to the exclusion of represented persons in 1881. There were 14 major operations, chiefly dislocations. The civil surgeon does not believe in all these dislocations, and has very little faith in any of the surgery at the outlying dispensaries. 343 minor operations were reported. There was expended Rs. 1,189, of

which Rs. 588 was expended on establishment, and Rs. 532 on English medicines. The latter charge can scarcely be legitimately incurred. Government paid Rs. 240, and the municipality paid Rs. 325.

*Diamond Harbour.*—Transferred to class I during the year. The dispensary is under the management of a local committee, which met eight times. Visited once by the magistrate and five times by the sub-divisional officer. No visit was paid by the civil surgeon, who remarks that "it requires two clear days to see an institution with an attendance of nine people." But this is a mistake. Diamond Harbour is a sub-division. A hospital assistant is in charge, who receives now his grade pay from the sub-division, and an extra allowance of Rs. 10 from the dispensary fund. 28 in and 1,174 out-patients were treated, against 3 and 1,063 in 1880; the daily average being 0·7 and 8, against 0·1 and 8. The in-door patients were almost all police cases. There were 4 deaths, of which 2 were from cholera. The people are said to be "apathetic and to avoid European treatment." One major and 31 minor operations were performed. The total expenditure was Rs. 713, whereof government paid Rs. 142. Rs. 585 was expended on establishment.

*Canning Town.*—Transferred to class I, *vide* government letter No. 1823, dated 28th December 1881. The dispensary is under the management of a local committee, which met 12 times. Inspected once by the civil surgeon. A hospital assistant is in charge, who received Rs. 15, or half the salary, from government during the year. 1,273 out-patients were treated, against 1,407 in 1880; the daily average being 8 and 10. 30 minor operations were recorded. The total expenditure was Rs. 582, whereof government paid Rs. 168.

*Shamnugger.*—Transferred to class I on 29th November 1881. A local committee manage the dispensary, who met 12 times during the year. The civil surgeon paid no visit. He states that "it is in a remote part of the district, difficult of access, and a very insignificant institution. The cost and loss of time and discomfort are out of all proportion to the benefit obtainable. It is a little private dispensary, situated in a verandah-room of the proprietor's house." A hospital assistant is in charge. The out-patients treated were 568 with a daily average of 17·7, against 904 and a daily average of 22·8 in 1880, or each patient attended the dispensary 11 times during the year. The accuracy of the figures is doubtful. The civil surgeon says that the daily average attendance has been correctly calculated, but there is no evidence for this. 40 minor operations were recorded. The total expenditure was Rs. 620, whereof government paid Rs. 189.

The report was received very late, viz on the 29th April. The civil surgeon's report is accompanied by an interesting letter from the commissioner of the division reviewing the working of the dispensaries in the district. The general health of the district was much worse than that of the six preceding years. Epidemic fever, which commenced in 1880, prevailed with more or less violence throughout the district during the year under report. The number of deaths registered was 73,196, against 33,065 and 28,126 in 1878 and 1879 respectively. In 1880, the number was 54,422. The increase, the commissioner says, was to a certain degree due to improved registration. The registered deaths from cholera were more than seven times those of 1880, but were less than those of 1876 and 1877. At the end of the year there were eight dispensaries in the district, of which the dispensary at Koostea was under the supervision of the civil medical officer, Goalundo. The Chooadangha dispensary was closed during the year in consequence of the committee failing to give the required guarantee, and the magistrate observes that this may eventually be the case with the dispensary at Bongong. Five of these dispensaries receive both in and out-door patients. The status of the dispensaries at the end of the year was five in class II and three in class I, all transferred to the latter class during the year. The total number of patients treated in all the dispensaries was 318 in and 21,251 out-patients, against 318 and 21,588 in 1880. In 1879 the numbers were 284 and 21,149 respectively. The exceptional unhealthiness of the district has not therefore affected the dispensary attendance, which is ascribed, very unsatisfactorily, to the deputation of medical subodinates on special duty in the district with suitable remedies provided by government. The figures in 1881 are said to have been tested by the civil surgeon in various ways, and he is of opinion that they may be regarded with more confidence than those of the preceding years. Two assistant surgeons and 6 hospital assistants are in charge. The municipalities manage 5 dispensaries, and 3 are under local committees The municipal bodies are said to take an interest in the dispensaries, while the local committees are "mere nominal managers, and often do all they can to evade the duty." The poor people, it is said, appreciate the charity, but those who can afford to pay for medicines generally resort to the numerous practitioners of all classes, who are found more or less throughout the district.

*Kishnaggur.*—A second-class dispensary under the local municipality. Visited twice by the district magistrate, once each by the joint-magistrate, the sanitary commissioner, and the inspector-general of jails. The civil surgeon paid 122 visits. A first-class assistant surgeon was in charge, who received his entire pay, Rs. 2,400 a year, from government. In September last orders were issued that an assistant surgeon of the third grade will be appinted to the dispensary on the retirement of the present assistant surgeon, and government contribution will be confined to the payment of half pay of a third-grade man, or Rs. 50 per month. The second compounder and chowkidar were discharged during the year under the orders of government. 163 in and 5,587 out-patients were treated, against 172 and 5,743 in 1880, the daily average being 8 and 51, against 8 and 57. The death-rate was 16·5, against 16·2 per cent. in 1880. Eight major operations, 6 being reduction of dislocations,

were performed. The small number of operations is said to be due to the unhealthiness of the place and the people in general. The total expenditure was Rs. 3,587, of which Rs. 2,895 was expended on establishment, and Rs. 389 on Europe medicines obtained from a private druggist. Government paid Rs. 2,415, and Rs. 889 was paid by the municipality.

*Natuda.*—A second-class dispensary, managed by a local committee with Baboo Nuffur Chunder Paul Chowdhery, the zemindar, as their secretary. Visited once by the sub-divisional officer, and twice by the civil surgeon. An assistant surgeon is in charge, who received Rs. 720, or half the salary from government. There is, however, no sufficient work for him. 82 in and 3,959 out-patients were treated, against 49 and 3,289 in 1880; the daily average being 3 and 33, against 1 and 31. No deaths were recorded during the year. On this the civil surgeon remarks that "this can hardly be correct when we consider that 82 in-patients were treated, while its thana (Damurbuda) mortality returns show a death-rate of 34·8 per 1,000 of population." The death-rate among in-patients in 1880 was 2·04 per cent. Three major and 171 minor operations were returned. The total expenditure was Rs. 1,965, whereof government paid Rs. 689. The amount expended on establishment was Rs. 1,584. The dispensary is chiefly maintained out of the interest of a capital of Rs. 36,000 made over by Baboo Nuffer Chunder Paul Chowdhry. Orders have since been issued for the establishment of a first-class dispensary with a civil hospital assistant on Rs. 20 or Rs. 25, and a sweeper, as soon as the necessary guarantee bond is executed, when the deposit money will be returned to the Baboo. The records of work of this dispensary are apparently worthless.

*Meherpore.*—A sub-divisional dispensary, transferred to class I during the year. It is under the management of the municipality. Nineteen meetings were held. Visited once by the commissioner, once by the magistrate, and twice by the civil surgeon. A hospital assistant is in charge, who now receives Rs. 10 per mensem as extra allowance from the dispensary, and his grade pay from government for the charge of the sub-division. 8 in and 2,702 out-patients were treated, against 17 and 2,946 in 1880; the daily average being ·79 and 23, against ·65 and 22. No deaths. One major—reduction of dislocation—and 171 minor operations were performed. The total expenditure was Rs. 604, whereof government paid Rs. 131; the municipality paid Rs. 448.

*Ranaghat*—A sub-divisional dispensary, transferred to class I during the year. It is managed by the local municipality. Twelve meetings were held. Visited once by the commissioner, twice by the magistrate, and four times by the civil surgeon. The hospital assistant of the sub-division is in charge, who received, after the change of status of the dispensary, an extra allowance of Rs. 10 per mensem from the funds of the institution, government paying him the grade pay for the charge of the sub-division. 15 in and 2,311 out-patients were treated, against 21 and 1,247 in 1880, with a daily average of ·75 and 40, against ·93 and 18. The attendance is said to have increased owing to a hospital assistant only having been sent for relief operations. The death-rate was 46·6 per cent., against 33·3 in 1880, the high rate being due to admissions of cases in their last stage. 145 minor operations were performed. The total expenditure was Rs. 690, of which Rs. 516 represents the cost of establishment. The government paid Rs. 105, and Rs. 495 was paid by the municipality.

*Santipore.*—A second-class dispensary, governed by the municipality. Four meetings were held. Visited once by the commissioner, once by the magistrate, and twice by the civil surgeon. A hospital assistant is in charge. 1,444 out-patients were treated, against 1,710 in 1880, with a daily average of 26 in both the years. Minor operations numbered 107; no major operation. The total expenditure was Rs. 827, of which government paid Rs. 260. The income from local sources, inclusive of Rs. 567 contributed by the municipality, was Rs. 894. The dispensary has since been transferred to class I.

*Ula.*—A small out-door institution in class II, under the management of a municipal committee. Three meetings were held. Visited once by the magistrate, twice by the sub-divisional officer, and thrice by the civil surgeon. 1,090 patients were treated, with a daily average of 22, against 1,086 and 18 in 1880. 47 minor operations were performed The total expenditure was Rs. 654, of which Rs. 546 was expended on establishment. Government paid Rs. 259. The superfluous compounder was discharged.

*Bongong.*—A second-class sub-divisional dispensary, under the management of a committee, which met nine times during the year. Visited once by the commissioner, twice by magistrate, once by the sanitary commissioner, and thrice by the civil surgeon. A hospital assistant is in charge, who receives Rs. 10 per mensem as extra allowance from government. 14 in and 2,036 out-patients were treated, against 6 and 1,405 in 1880; the daily averege being ·67 and 19, against ·34 and 24. 29 minor operations were performed The total expenditure was Rs. 405, of which Rs. 125 was paid by government. Orders have since been issued for the establishment of a first-class dispensary.

*Chooadangha.*—A second-class dispensary, which was closed on the 23rd May 1881. One in and 357 out-door patients were treated, with a daily average of ·03 and 3 respectively. 17 minor operations were performed. The total expenditure was Rs. 240, of which government paid Rs. 81. There remained Rs. 244 in the savings bank after the dispensary was closed.

**Koostea sub-division.** A sub-divisional dispensary, transferred to class I during the year. It is under the supervision of the civil medical officer, Goalundo, by whom the report was submitted. It

is under the management of a local committee, who held nine meetings. The dispensary was visited once each by the magistrate, sub-divisional officer, and the civil medical officer. 35 in and 1,765 out-door patients were treated, against 41 and 1,970 in 1880; the daily average being 1·8 and 16, against 1·2 and 15. The indoor ward was closed during the year. The reduced number of attendances in 1881 is explained by the fact that patients, who would under ordinary circumstances have found their way to the dispensary, have been treated by the special hospital assistant deputed to afford medical aid to fever-stricken people. The death-rate was 20 per cent. against 12·1 in 1880. No explanation was given of the increase. The total expenditure was Rs. 780, whereof government paid Rs. 171; the municipality paid Rs. 200.

**Jessore district.**

The report is covered by letters from the commissioner and the magistrate, containing useful criticism on the working of the dispensaries. The district was an unusually sickly one; malarious fever and its complications were the chief diseases treated. There was also more cholera than usual, but none of these diseases can be said to have prevailed in an epidemic form. There were 11 dispensaries working at the commencement of the year. Four transferred to class I, and one was closed during the year. The total attendance shows decrease, and it is stated, among other things, that the increase in the number of drug-shops has contributed to this reduction to a certain extent. At Khoolna this has had the effect of diminishing the subscriptions to the dispensary considerably, and the realization of arrears was a matter of difficulty. All the dispensaries are managed by local committees except the sudder dispensary, which is under the municipality. The commissioner is not satisfied with the interest taken by the managing committees, except in the cases of the Sridhurpore and Magura dispensaries. He states that "though the necessity of meeting at least once a month has been repeatedly pressed upon the attention of all local committees, both through the magistrate and the civil surgeon, there has been no improvement in the remaining seven in this respect; on the contrary, matter has been worse with some." It is observable, however, that secretaries and committees are ready to vouch for the accuracy of the returns. There is no other evidence on this point, and the change in calculation may have been the true, as it is the assigned cause of reduction; it is very improbable from the date of the order, and it would not, or should not, affect the totals. Except the Jhenidah and Magura dispensaries, all the institutions were inspected by the civil surgeon once only. This was in consequence of Dr. Comins having been informed by his predecessor, on his taking over charge, that all the dispensaries had been visited twice. The sudder dispensary receives both in-door and out-door patients. In the sub-divisional dispensaries at Bagirhat, Khoolna, Jhenidah, and Magura, police cases are admitted and returned as in-door patients. The sudder dispensary is in charge of an assistant surgeon; the rest are all under civil hospital assistants.

*Jessore.*—A class II dispensary, under municipal management. A second-grade assistant surgeon was in charge, who has been ordered to be replaced by a third-grade man, half of whose salary will be borne by government. The second compounder and clerk were discharged under the orders of government, but the former was reappointed on the 28th November under order from the magistrate. There is no necessity whatever for a second compounder in this dispensary. The number of patients treated was 313 in and 4,961 out-patients, against 204 and 5,123 in 1880. The daily average attendance was 10 and 32, against 9 and 31. Among the in-patients there were 28 deaths in 1881, against 25 in the previous year. Major operations numbered 31, of which 9 were performed by the civil surgeon. 236 minor operations were performed. The income during the year amounted to Rs. 2,925, of which government contributed Rs. 1,138. The total expenditure was Rs. 3,239, of which Rs. 2,212 represents the cost of establishment. The dispensary was visited by the commissioner, twice by the magistrate, and once by the inspector-general of jails. The civil surgeon paid daily visits.

*Bagirhat.*—A sub-divisional dispensary, transferred to class I during the year. It is managed by a committee, who met five times. A first-grade civil hospital assistant is in charge The dispensary is of nominal usefulness. There were 111 in and 1,117 out-patients treated in 1881, against 77 and 1,176 in 1880; the daily average being 2·6 and 6·9, against 1·5 and 10·2. The in-patients represent police cases, of whom three died from injuries. 70 minor operations were performed. The total income was Rs. 1,347, inclusive of Rs. 639, balance in hand on 1st January 1881, of which government contributed Rs. 348. The total outlay was Rs. 682. The dispensary was visited by the commissioner, thrice by the magistrate, and once by the civil surgeon.

*Khoolnah.*—A sub-divisional dispensary, placed in class I in September last. The committee met six times during the year. The dispensary was visited by His Honor the Lieutenant-Governor on the 19th August; by the commissioner on 17th March; three times by the district magistrate, and once by the civil surgeon. A first-grade civil hospital assistant (without English) is in charge, who receives his grade pay from the sub-division, the dispensary paying him an extra allowance of Rs. 10 a month. The dispensay is of very little use to the people. 1,770 out-patients were treated, against 1,386 in 1880, the daily average attendance being 16, against 14. No major operations; minor operations numbered 94. The total income was Rs. 924, including the balance Rs. 172 in hand on 1st January 1881, of which government paid Rs. 342. The total expenditure amounted to Rs. 726.

*Narail.*—A sub-divisional dispensary, transferred to class I in September last. It is under the management of a local committee, who held eight meetings during the year. A

second-grade civil hospital assistant is in charge, who receives his grade pay from the sub-division, and an extra allowance of Rs. 10 from the dispensary fund. The dispensary was inspected once by the commissioner and the civil surgeon, and twice by the district magistrate. It is also of nominal usefulness to the people. There were treated 1,599 out-patients, or a daily average of 13 in 1881, against 1,770 and 14 respectively in 1880. No major operation; 86 minor operations were performed. The total income from all sources was Rs. 869, including the balance Rs. 122 in hand in 1st January 1881, and the total expenditure was Rs. 583.

*Magurah.*—A sub-divisional dispensary, placed in class I in September. It is managed by a committee, who held 17 meetings. A third-grade civil hospital assistant is in charge, who received Rs. 10 as extra allowance from the dispensary fund, government paying him the pay of his grade for charge of the sub-division. The cook attached to the dispensary was discharged, and the sweeper's pay reduced during the year. The dispensary is useless to the people. The registered number of out-patients treated was 2,490, against 3,280 in 1880, the daily average being 10·8, against 10·6. Fevers are said to have prevailed in an epidemic form since August last, but the dispensary figures do not show this. 52 minor operations were performed. The dispensary was inspected by the commissioner, and twice by the district magistrate and the civil surgeon. The income during the year amounted to Rs. 941, of which government paid Rs 187, and the total expenditure was Rs. 822.

*Jhenidah.*—A class II dispensary under the new rules. The dispensary had to be closed for two months (February and March) for want of funds. It was reopened on 1st April under rule VII of the old rules, and the dispensary paid nothing to the civil hospital assistant of the sub-division. There is no committee at present, the dispensary being managed by the sub-divisional officer. The magistrate has been asked to arrange for a committee. The dispensary was visited twice by the civil surgeon; no visits were paid by civil officers. There were 20 in and 1,353 out-patients, with a daily average of ·24 and 8, against 14 and 3,923 with 1 and 18 respectively in 1880. The dispensary is of no use to the people. The in-door patients apparently represent police cases. Five major and 84 minor operations were performed. Funds are very low. The income from local sources amounted to Rs. 128, or Rs. 8 more than the usual dispensary contribution of Rs. 120 a year towards the civil hospital assistant's pay. Government contributed Rs. 134, which, together with the cash balance of Rs. 454 on 1st January, amounted to Rs. 716 as the total income. Of this amount Rs. 228 was expended, leaving a balance of Rs. 488 at the end of the year.

*Dowlutpore.*—A dispensary in class II, government contributing the full salary (Rs 480) of the civil hospital assistant. The dispensary is of nominal usefulness to the people. It is under the management of a local committee, who met four times during the year. It was visited once by the magistrate, and once by the civil surgeon. There were treated 1,287 out-patients, with a daily average of 17 in 1881, against 1,040 and 17 in 1880. For this nominal work a compounder on Rs. 8 and a servant on Rs. 5, besides a sweeper on Rs. 2, are employed. The compounder and servant are superfluous. The dispensary should be closed as a government institution, but if the supervision of the civil surgeon be allowed, it should be placed in class I, for which the guaranteed income of the dispensary will suffice. The civil hospital assistant need be paid his grade pay only. The income of the dispensary during the year was Rs. 975, of which government contributed Rs. 480. The total expenditure amounted to Rs. 1,301, including a refund of Rs. 520 embezzled by the magistrate's accountant.

*Sreedhurpur.*—A dispensary in class II, under the management of a committee, who met 13 times during the year. It is of little use to the public. The daily number of out-patients treated was 20·1, against 20·6 in 1880. It was recommended that the dispensary should either be closed, or transferred to class I with its ample pecuniary means. The case was under the consideration of government at the close of the year. The income from local sources in 1881 was Rs. 501; government contributed Rs 485, of which Rs. 480 was for the salary of the civil hospital assistant. The total expenditure amounted to Rs. 662, of which Rs. 545 represents the cost of establishment. The cash balance at the end of the year was Rs. 1,511, besides an invested capital of Rs. 1,174. The dispensary was visited once by the civil surgeon; no visits were paid by civil officers. The dispensary has since been placed in class I.

*Morrelgunge.*—A class II dispensary, government contributing Rs. 15 per mensem, or half the salary of the civil hospital assistant. It is managed by a committee, who met four times during the year. There were treated 1,773 patients, against 2,051 in 1880, with a daily average of 10 and 22. There were no major operations; minor operations numbered 38 only. The work in this dispensary does not justify the use of government money, the private income being more than sufficient for all legitimate wants. A superfluous compounder was employed, who has been discharged. The dispensary should either be closed or maintained in class I of the rules. The institution was visited once by the district magistrate, and once by the civil surgeon. Orders have since been issued for the closure of the dispensary from 1st March 1882, as the proprietors of the Morrelgunge estate have expressed their intention of withdrawing their subscriptions.

*Chandra.*—A second-class dispensary, government contributing Rs. 480 a year, or the full salary of the civil hospital assistant. There is no committee, the dispensary matters being disposed of by the secretary, who pays the whole amount of subscriptions. There were 2,036 out-patients treated, with a daily average of 14, against 1,701 and

12 in 1880. 99 minor operations were performed. It was reported that "this dispensary has been a mistake from the beginning; it has never served any charitable purpose. The money spent has been wasted, and that which has accumulated is useless." The case was under the consideration of the government at the end of the year. The dispensary should be closed, but all the indulgence that could be granted is to allow the supervision of the civil surgeon, and to place the dispensary in class I of the rules. The income from private sources in 1881 amounted to Rs. 516, which is more than sufficient for all the legitimate wants of the dispensary. A compounder, who was needlessly maintained, has been discharged during the year. The total expenditure amounted to Rs. 759, of which Rs. 608 was expended on establishment, and Rs. 151 on all other charges. At the end of the year, there was a cash balance of Rs. 1,967, besides Rs. 1,006 deposited in the savings bank. The civil surgeon visited the dispensary once.

**Moorshedabad district.**

The report is complete, and is covered by a letter from the commissioner, reviewing the working of the dispensaries in the district. The public health of the district was worse in 1881 than the preceding year. Fever broke out in an epidemic form in some villages. Of the total registered deaths, viz., 37,787, 33,448 are said to have been caused by fevers. The deaths from cholera and small-pox also show an excess over 1880. There are six dispensaries, viz., two in class I and four in class II. The affairs of the Berhampore, Jungipore, and Kandi dispensaries were under the consideration of government at the close of the year. All the dispensaries in the district receive in-door patients, and are in charge of assistant surgeons. Two of these institutions were transferred to municipalities during the year. The civil surgeon has "no doubt whatever that all the dispensaries are thoroughly appreciated by the people." I am afraid he is easily convinced on this point. The marked unhealthiness of the district was not attended by increase of dispensary practice.

*Berhampore.*—A second-class dispensary, under a committee who held 12 meetings during the year. Government contributes Rs. 720 a year, or half the salary of the assistant surgeon. The income of the dispensary is sufficient for its maintenance without government aid. The orders of government on the re-classification of this institution were pending at the close of the year. The dispensary was visited by the commissioner, magistrate, and the sanitary commissioner, Bengal. The civil surgeon paid daily visits. The number of patients treated was 392 house and 7,829 out-patients, against 466 and 7,899 in 1880. The daily average attendance was 16 and 51, against 22 and 57. The death-rate among in-patients was 19·1 per cent., against 21·8 per cent. in 1880. 16 major operations were performed, of which one proved fatal. Minor operations numbered 630. The income during the year, including special donations and accumulated interest on investments, &c., amounted to Rs. 8,950. The total expenditure was Rs. 5,846, including Rs. 2,650 expended on buildings. The amount of invested capital at the end of the year was Rs. 45,000 in government securities, and Rs 1,387 in the savings bank. The extension and improvement of the original dispensary building have been effected, and the institution is now capable of comfortably accommodating 36 in-patients. The dispensary has since been placed in class I.

*City Moorshedabad.*—A second-class dispensary, under the management of a committee of its own, who met nine times during the year. It was inspected by the sanitary commissioner and district magistrate. The civil surgeon paid monthly visits, and oftener when required. There were treated 254 in and 9,069 out-patients, against 371 and 9,461 in 1880; the daily average attendance being 11 and 52, against 15 and 52. The death-rate was 9·8, against 12·6. There were 63 major operations with 2 deaths; minor operations numbered 563. The income of the dispensary was Rs. 2,905, of which government paid Rs. 1,137, and the total expenditure amounted to Rs. 2,736. The establishment was reduced during the year under the orders of government, but superfluous servants are still maintained. A further reduction was under contemplation. Government contribution to this dispensary is confined at present to half the salary of the assistant surgeon.

*Jungipore.*—A dispensary in class II, government contributing Rs. 720, or half the salary of the assistant surgeon. It was managed by a dispensary committee the greater part of the year, and towards the end of the year it was transferred to the municipality. The committee, as long as it existed, held monthly meetings. The dispensary was visited by the commissioner, the district magistrate, and the sub-divisional officer. The civil surgeon inspected it four times. A compounder is maintained here on Rs. 20 a month, besides a dresser on Rs. 6. The reclassification of this dispensary was under the consideration of government at the close of the year. There were treated 88 in and 5,853 out-patients, against 115 and 6,019 in 1880; the daily average being 6·7 and 42, against 6·6 and 46. The death-rate was 18·1 per cent. Four major and 284 minor operations were performed. Fevers prevailed in an epidemic form here, but the decrease in dispensary attendance was due to medical relief having been afforded to the sufferers in their own villages. The income of the dispensary during the year amounted to Rs. 2,352, of which Rs. 729 was paid by government, and the total expenditure was Rs. 2,265. Orders have since been issued for the reduction of establishment and the transfer of the dispensary to class I.

*Kandi.*—This is a second-class dispensary, transferred to the municipality in April last. It was visited by the commissioner, the district magistrate, and frequently by the sub-divisional officer. The civil surgeon inspected it twice. The assistant surgeon in charge passed into the higher grade during the year, and the government contributed Rs. 90 towards his pay from 2nd May. The case of this dispensary was under the consideration of government at the close of the year. 163 in and 7,026 out-patient swere treated, against 95

and 6,298 in 1880; the daily average being 5 and 66, against 5 and 71. There were 17 deaths among in-patients, or a rate of 10·4 per cent. Twenty-six major and 222 minor operation were performed. The income during the year amounted to Rs. 2,477, including Rs. 982 paid by government, and the total expenditure was Rs. 2,494. The dispensary has since been placed in class I.

*Azimgunge.*—This is a first-class dispensary, under the management of Rai Dhunput Singh Bahadoor, the sole supporter of the institution. There is a nominal committee, but the members never met during the last nine years or more. The dispensary was visited by the commissioner and the district magistrate; the civil surgeon inspected it every month, and oftener when required. There were treated 281 in and 8,883 out-patients, against 314 and 9,205 in 1880; the daily average being 9 and 47, against 10 and 52. The death-rate was 13·5 per cent., against 19 in 1880. 21 major and 558 minor operations were performed. The total expenditure amounted to Rs. 2,277. The total income was Rs. 2,277, of which government contributed Rs. 26, viz. Rs. 19, the value of forms, and Rs. 7 for diet of police cases. Rs. 155 was received from the municipality.

*Lalgola.*—A first-class dispensary, solely supported by Rao Jogendro Narain Roy. The dispensary was visited by the district magistrate and the sub-divisional officer of Jungipore; the civil surgeon inspected it twice. 169 in and 3,425 out-patients were treated during the year, against 202 and 3,216 in 1880; the daily average being 5 and 19, against 8 and 21. The death-rate was 4·1 per cent., against 5·9 in 1880. The dispensary being situated in a quiet village in a remote corner of the district, the patients admitted into it are not of the same class as are generally admittted in the last stage of disease in dispensaries situated in sudder stations or in sub-divisional head quarters, and to this cause the reduced mortality in the dispensary is attributed. The total expenditure amounted to Rs. 2,290, inclusive of Rs. 8, being the value of forms supplied by government.

### RAJSHAHYE AND COOCH BEHAR DIVISION.

**Dinagepore district.**

The public health of the district was on the whole much better in 1881 than the preceding year, owing to decrease of fever. There were five dispensaries at the beginning of the year, of which the sudder dispensary only receives in-door patients. Three of these dispensaries were placed in class I of the rules during the year. Various means were adopted by the civil medical officer to verify the recorded attendance, and the figures may be regarded as approximately true except those of the Mohadebpore dispensary, which are open to suspicion. They are evidently false. The sudder dispensary figures, which are daily checked by the civil surgeon, are correct. The aggregate figures of the district are made to appear absurd by the inclusion of these figures.

*Dinagepore.*—A second-class dispensary. The government grant consists of Rs. 300 as half the salary of the civil hospital assistant, and Rs. 100 in lieu of medicines. The latter contribution, which was sanctioned in resolution dated 18th November 1879 for two years, will not be continued beyond that period. The dispensary is governed by a committee of 15 members, who held four meetings during the year. The civil officer paid several visits, and the civil surgeon visited the dispensary almost daily. There were treated 322 in and 3,155 out-patients, against 319 and 3,118 in 1880, the average daily attendance being 9 and 26, against 8 and 26 respectively. The number of deaths in house-patients was 56, or one more than that of 1880. 8 major and 87 minor operations were performed. The income of the dispensary during the year amounted to Rs. 1,457, of which government contributed Rs. 429, and the total expenditure was Rs. 1,602. The dispensary has been placed in class I on the 25th April 1882.

*Raigunge.*—Transferred to class I in July 1881. The dispensary is managed by a committee, who met 12 times during the year, and who are said to take interest in its welfare. The guaranteed income of the institution is Rs. 40 a month, paid by Maharani Syam Mohini of Dinagepore. 1,472 out-patients were treated during the year, against 1,450 in 1880, the daily attendance being 20, against 19. One major and 30 minor operations were performed. The income of the dispensary was Rs. 220, including Rs. 120 paid by government, and the total expenditure amounted to Rs. 425. The cash balance left in the savings bank at the end of the year was Rs. 479. The dispensary was visited once by the district magistrate, and twice by the civil surgeon.

*Chooramun.*—Placed in class I from August. It is supported by an estate under the court of wards with a monthly subscription of Rs. 40. The dispensary is under the management of a committee, who met every month. There were treated 1,369 out-patients, against 1,348 in 1880, the daily average being 15, against 17. Cholera broke out in Chooramun and in some of the adjoining villages, which accounts for the larger number of cases treated in 1881. 78 minor operations were performed, against 51 in 1880. The income of the dispensary was Rs. 548, including Rs. 124 paid by government, and the total expenditure was Rs. 456. The civil surgeon visited the dispensary twice during the year; the civil officers paid no visits.

*Mohadebpore.*—Transferred to class I in August. The dispensary is under the management of a committee, who held 13 meetings during the year, against 3 in 1880. This regularity is ascribed by the civil surgeon to other causes than the real interest taken by them. The civil surgeon states that "this institution is not well looked after by the managing body." 916 out-patients were registered, against 933 in 1880, the daily

attendance being 2, against 5. The dispensary is quite useless. It is not worth while to keep up an establishment for treating two patients daily, and to take away the civil surgeon twice during the year to inspect the dispensary. Twenty-five minor operations were performed. For this nominal work a sum of Rs. 369 was expended, of which Rs. 288 represents the cost of establishment. The government contributed Rs. 120 as a moiety of the pay of the native doctor till August, and Rs. 4 as the cost of forms. The district magistrate and the civil surgeon visited the dispensary twice each.

*Baloorghat.*—A dispensary in class II, under the management of a committee, who met every month, and seemed to take interest in its working. Government contribution is confined to Rs. 15 per mensem, or half the salary of the civil hospital assistant. There were 1,931 out-patients treated in 1881, against 641 in the previous year, with a daily average of 20 and 15. No major operation; 51 minor operations were performed. The income of the dispensary amounted to Rs. 679, of which Rs 184 was paid by government. The total expenditure was Rs. 506. In December last the civil surgeon reported that "the fund of the dispensary is now in such a state that it can easily afford to pay the hospital assistant his whole grade pay, and the government aid may be easily dispensed with." A report has since been submitted to this effect, and the orders of government are awaited.

**Rungpore district.**

Fevers prevailed almost to the same extent as in 1880. Cholera was absent until the end of November, when it broke out in some parts of the district. The drainage of the swamps in 1879 is said to have contributed to the reduction of mortality, especially of that from fever in the town. There were 13 dispensaries at the beginning of the year, of which one (Kishoregunge) was closed on 26th November last. Of the 12 remaining at the close of the year, six were under class I, and six under class II. The total daily attendance in all the dispensaries was 15 in and 261 out-patients. The figures were compared with the monthly returns, and the civil surgeon says, may be accepted as correct. All the dispensaries are in charge of civil hospital assistants, except the Kurigram dispensary, where a third-grade assistant surgeon is employed. Dr. Ghose says that a fair interest is taken by members in dispensaries under the management of committees, and dispensaries under the management of private individuals are well looked after.

*Rungpore.*—A second-class dispensary, government contributing Rs. 330 per annum, or half the salary of a first-class hospital assistant. It is under the management of the local municipality, and visited daily by the civil surgeon. The commissioner and the magistrate inspected once. In October the hospital assistant in charge was removed for misconduct, the native doctor of the police hospital conducting the duties of the dispensary in addition to his own. There were treated 371 in and 8,798 out-patients in 1881, against 410 and 10,623 in the previous year. the daily average attendance being 11 in and 32 out, against 14 and 46. The improvement in the public health of the town is said to have caused the decrease. Of the house-patients 11·8 per cent. died, against 11·7 in 1880. The civil surgeon states that 20 out of 44 patients who died were brought into the dispensary merely to die under shelter. 13 major and 216 minor operations were performed. The total income of the institution amounted to Rs. 2,337, including the balance Rs. 58 in hand on 1st January 1881, of which government contributed Rs. 422, inclusive of Rs. 150 as special allowance in lieu of medicines, which will cease on 31st March 1882. The total expenditure was Rs. 2,105. The expenditure on bazar medicines, viz. Rs 279, is too high. In this office No. 3656, dated 10th August 1881, it was pointed out that the expenditure of the dispensary was wasteful. It was ordered that if government aid is to be continued to this dispensary, the second compounder must be discharged, and the dismissal of either the water-carrier or the cooly was also ordered. The private funds of the dispensary, if properly conducted, will more than suffice for its legitimate wants.

*Mahigunge.*—An out-door dispensary in class II in the old town of Rungpore, and under the management of the Rungpore municipality. The civil surgeon inspected the dispensary about twice a week; no visits were paid by civil officers. 6,101 patients were treated, against 5,304 in 1880, with a daily average of 25 in both years. Fevers and goitre are the prevailing diseases treated here. Minor operations numbered 61 only; no major operation. The income during the year amounted to Rs. 991, inclusive of Rs. 336 paid by government, and the total expenditure was Rs. 1,087, which includes a charge of Rs 324 on "building or repairs," and Rs. 70 paid as house-rent before the new building was occupied. A compounder is needlessly maintained. The local income of the dispensary is more than the institution requires for its legitimate wants. The dispensary has been placed in class I.

*Ulipore.*—A first-class dispensary, entirely supported by Moharani Surnomoyee of Moorshedabad. It is under the private management of her local agent, who is said to take much interest in its welfare. The civil surgeon visited the dispensary twice during the year, the assistant magistrate and the sub-divisional officer each once. A civil hospital assistant is in charge, who is paid Rs. 70 a month. There were treated 32 in and 5,034 out-patients against 43 and 5,225 in 1880, the daily average being 2·9 and 45, against 2·9 and 46. There were 8 deaths or 25 per cent. Minor operations numbered 96. The total expenditure amounted to Rs. 2,002, of which Rs. 14 represents the cost of forms supplied by government.

*Gyebanda.*—A second-class dispensary at the head-quarters of the sub-division. It is managed by a committee, who met only once during the year. The civil surgeon paid two

visits; the magistrate paid one visit. The dispensary is of nominal usefulness. The daily average number of persons attending rose from 14 to 20 in 1881, the increase being due to the increased number of cases of goitre treated. 16 minor operations were performed. The income of the dispensary was Rs. 397, of which Rs. 271 was realized from local sources, or Rs. 103 less than the amount received last year; the total expenditure was Rs. 305. The private income of the dispensary is sufficient for its maintenance in class I. Government contribution is confined to Rs. 10 per mensem as extra allowance to the native doctor of the sub-division, which may be withdrawn at once. There was an invested capital of Rs. 1,471 at the end of the year.

*Batashim.*—A first-class dispensary, supported entirely by Roy Lutchmiput Sing Bahadoor of Moorshedabad, under the private management of the superintendent of his estate. It was visited once by the assistant magistrate, and twice by the civil surgeon. There were treated 3,965 out-patients, against 4,150 in 1880, with a daily average of 26, against 29. Minor operations numbered 158. The total expenditure amounted to Rs. 756, including Rs. 7, the cost of forms supplied by government.

*Kakina.*—A dispensary in class I. It had a committee, which has ceased to exist. It is now under the private management of the local zemindar, who entirely maintains it. The judge and the assistant magistrate visited the dispensary once each, and the civil surgeon twice. The number of patients treated in 1881 was 30 house and 6,155 out-patients, the daily average being ·9 and 8, against 44 and 6,492, with a daily average of 2 and 29 in 1880. The reduction in the daily attendance was due to the exclusion of represented persons from the calculation, who form the major portion of the attendants in this dispensary. Four major operations of no importance, and 113 minor operations, were performed during the year. The total expenditure amounted to Rs. 972, of which Rs. 7 represents the cost of forms supplied by government.

*Tushbunder.*—A first-class dispensary. A nominal committee exists, but the institution is really under the private management of the local zemindar, who pays the entire cost of its maintenance. A civil hospital assistant is in charge, who is not in the service of government. The dispensary was visited twice by the civil surgeon. There were treated 7,752 out-patients, and the daily average is said to have been 19, which are impossible figures, against 4,512 and 23 in 1880. The total expenditure amounted to Rs. 807, inclusive of Rs. 11, the cost of forms supplied by government.

*Dinhatta.*—A dispensary in class II. There was a managing committee, but on the death of the supporter, Baboo Jogendranath Roy Chowdhry, it ceased to exist. It is now under the private management of the managers of the estate of the Baboo, though by what authority a second-class dispensary is so managed does not appear. The dispensary was visited by the district magistrate and the sub-divisional officer of Kurigram; the civil surgeon paid two visits. The dispensary is of very little use to the public. The number of out-patients treated in 1881 was 3,355, against 2,174 in the previous year, the daily attendance being 16 and 18. There were only 23 minor operations. The income of the dispensary was Rs. 660, of which government contributed Rs. 180, and the total expenditure amounted to Rs. 561. The expenditure on bazar and Europe medicines was high for the work done. The private income of the dispensary should be quite sufficient for its legitimate wants.

*Domla.*—This dispensary was transferred to class I during the year. It is under the management of a committee, who held three meetings. The magistrate, sub-divisional officer, and the civil surgeon each paid two visits in the year. 2,099 out-patients were treated, against 2,463 in 1880, the daily average being 13 and 16. Minor operations numbered 27 only. The income of the dispensary amounted to Rs. 635, including Rs. 155 paid by government, and the total expenditure was Rs. 519.

*Saptana.*—A first-class dispensary, under private management, supported by the estate of late Baboo Annoda Prosad Rai, which is under the court of wards. The civil hospital assistant was getting Rs. 40 per mensem, which was reduced to Rs. 30 during the year. There is no establishment under the hospital assistant. There were treated 2,691 out-patients, against 3,340 in 1880, the daily attendance being 16 and 18 respectively. 33 minor operations were performed. The total expenditure was Rs. 666. The magistrate and the sub-divisional officer visited the dispensary; the civil surgeon inspected it twice.

*Bogdogra.*—A second-class dispensary, in charge of the civil hospital assistant of the sub-division, who receives Rs. 10 per mensem from government. The dispensary will be closed on the transfer of the sub-divisional head-quarters to Nelphamaree, unless the supporters undertake to maintain it in class I. It is managed by a committee, who met five times. It was visited twice by the district magistrate and the civil surgeon. There were treated 1,415 out-patients, against 1,475 in 1880, the daily average being 13, against 11. The income during the year amounted to Rs. 441, of which government contributed Rs. 122, and the expenditure was Rs. 281. The dispensary invested Rs. 117 during the year, and the total investment at the end of the year was Rs. 1,774. This shows that the government aid is not at all required, and may be withdrawn at once.

*Kurigram.*—A sub-divisional dispensary. No direct payment is made by government on account of the dispensary. The assistant surgeon of the sub-division is in charge, who receives his grade pay (Rs. 100) from the sub-division, and Rs. 20 from the lock-up. The dispensary pays nothing, and it may be regarded as an institution in class I, though in the list it is placed in class II. The services of an assistant surgeon are not required, but the present arrangement has been ordered to stand so long as the dispensary costs the government

nothing. There were treated 5,678 out-patients, against 4,115 in 1880, the daily average attendance being 23, against 20. The increase in attendance was caused by the opening of the Kownia and Dhurla Railway. Sixty-five minor operations were performed. The total income amounted to Rs. 750, including a balance of Rs. 157 on 1st January 1881, and Rs. 6, the cost of forms supplied by government. The total expenditure was Rs. 474, of which Rs. 263 represents the salary of menial servants engaged in the dispensary.

**Rajshahye district.**

The public health in 1881 showed considerable improvement over that of the past two or three years. Fevers, which were chiefly of the intermittent type, were not so severely prevalent as in 1880. Cholera prevailed severely in the months of March, April, and May. There are eight dispensaries in this district: five of these are now in class I, and the remainder in class II of the rules. None of the dispensaries are under charge of municipalities. The civil surgeon states that the majority of the managing bodies appear to think that their interest should end in the paying of subscriptions. Little interest is shown by them in the working of the dispensaries. It does not appear that any effective measures were taken to check the figures, which cannot be regarded, therefore, as having any value; nor do the measures proposed by the civil surgeon afford much hope of improvement.

*Baulcah.*—It is a class II dispensary. A first-grade assistant surgeon is in charge, whose entire salary was paid by government. In July last it was ordered to replace him by a third-grade officer, one-half of whose salary will be paid by government; but in consideration of the present incumbent retiring on pension, to which he will be entitled after a year and half, he has been ordered as a special case to remain in charge, government paying Rs. 150 and the dispensary fund Rs. 50 a month towards his salary. The Prosunnonath fund pays the entire expenses, except a portion of the assistant surgeon's salary. There were treated 262 in and 6,358 out-door patients in 1881, against 299 and 5,822 in 1880. The average was 11·9 in-door and 64 out-door, against 15 and 67 in 1880. The death-rate was 12·5 per cent., against 12. Major operations numbered 26, but few were really important. Of these few, the superintendent operated in five cases, and there were no deaths. 347 minor operations were performed during the year. The dispensary was almost daily visited by the civil surgeon, and once by the commissioner. No visits were paid by the magistrate, who observes, in his letter covering the report with reference to the remarks of the civil surgeon, that the "civil officers doubtless did not think that it was necessary to visit the dispensary, knowing it was regularly visited by the civil surgeon." The establishment maintained is moderate. The total expenditure was Rs. 4,021, of which government contributed Rs 2,412. The cost of medical stores was Rs. 782, against Rs. 215 in 1880. The increase was due to the purchase of a capital amputating case, the cost of which alone was Rs. 430. The committee met only once during the year.

*Nattore.*—A first-class dispensary, supported by the Prosunnonath fund, and managed by the sub-committee of the fund. There was no meeting held. The dispensary was twice visited by the civil surgeon, and frequently by the sub-divisional officer. The in-door patients treated in 1881 were 96, against 144 in the preceding year, and out-door 3,663, against 3,696. The death-rate was 25 per cent., against 20 in 1880. There were 12 major and 158 minor operations during the year. A civil hospital assistant is in charge. The total expenditure was Rs. 1,371.

*Pooteah.*—A first-class dispensary, supported by Rani Monmohinee Debya. There is no committee. The dispensary was occasionally visited by the principal agent of the Rani. The magistrate and the civil surgeon paid two visits each. There is no in-door accommodation. Out-patients numbered 4,622, with a daily average of 46, against 5,298 and 68 in 1880. The decrease is ascribed to less prevalence of sickness. There were performed 10 major operations of no importance, and 199 minor operations The dispensary is in charge of a civil hospital assistant. The total expenditure was Rs. 1,076.

*Kurruchmaria.*—A second-class dispensary, under the management of Baboo Raj Kumar Sircar, who pays all the expenses except the half salary of the civil hospital assistant. The establishment was reduced during the year under the orders of government. There were treated 1,665 out-patients, against 920 in 1880, the daily average being 27 and 18. The increase in the past year is attributed by the civil hospital assistant to a greater prevalence of fever; but in this the civil surgeon does not agree, and seriously questions the accuracy of the figures. Thirty minor operations were performed. The dispensary was visited once by the sub-divisional officer, and once by the civil surgeon. The place is far from the sudder-station, and not easily accessible. The dispensary is almost useless as a charity. The money paid by Baboo Rajcoomar Sircar, viz Rs. 480 a year, is more than sufficient for the legitimate expenses with a hospital assistant on Rs. 25 as grade pay, and a sweeper on Rs 2 per monsem The government aid is not required.

*Lalpore.*—A first-class dispensary, supported by Maharani Surut Soondri Debya. Visited once by the civil surgeon. Press of work detained him at the end of the year, when he contemplated paying another visit. No visits were paid by any civil officer. There were 2,751 out-door patients treated, against 2,434 in 1880. The average was 38, against 33. A great deal of cholera prevailed, but the dispensary does not appear to have rendered much aid. 3 major and 64 minor operations were performed. A civil hospital assistant holds charge. The total expenditure amounted to Rs. 983.

*Bolihar.*—A first-class dispensary, maintained by Rajah Kristendra Roy. Visited once by the magistrate, and twice by the civil surgeon. The attendance in the year was 1,656 out-patients, with a daily average of 20, against 1,790 and 22. The average was erroneously calculated by the number of days for which medicines were issued, and not by the actual daily attendance. A compounder is needlessly maintained. Minor operations numbered 101. The total amount expended was Rs. 1,153, which is too high for the work done. A private native doctor of the vernacular licentiate class is in charge, who is paid Rs. 60 a month from dispensary fund.

*Tahirpore.*—A dispensary in class II, supported by the court of wards in all but half the salary of the native doctor. The number of out-patients treated was 3,485, with a daily average of 32, against 3,447 and 35· in 1880. The calculation of daily average was incorrect, as the number of days for which medicines were issued has been taken as actual attendances. There was one meeting only. The dispensary was twice visited by the civil surgeon; no visits were paid by civil officers. There were performed 118 minor operations. The in-door ward was closed during the year. The private income of the dispensary is more than sufficient for its maintenance in class I without government aid, which consists of Rs. 300 a year, or half the salary of the civil hospital assistant. The civil hospital assistant need be paid his grade pay only. The expenditure on miscellaneous items and bazar medicines was too high for the work done. The dispensary has since been placed in class I.

*Kassimpore.*—The dispensary was placed in class I in September last. The civil surgeon under a misapprehension treats this as one in class II. Six meetings were held by the committee. Once visited by the civil surgeon; no visits were paid by civil authorities. There were 1,564 out-patients treated in 1881, against 1,239 in 1880. The daily average attendance was 33, against 32. Forty-four minor operations were performed during the year. The total expenditure was Rs, 555, of which government paid Rs. 188.

**Bogra district.**

The general health of the people was not so good in the year under review as in the three preceding years. The most prevalent disease, as usual, was fever. There are three dispensaries in this district, all in charge of civil hospital assistants. One was transferred to class I during the year. On the Nowkhilla and Sherepore dispensaries the officiating magistrate remarks that "the native doctors at the two last-named places do not seem to work these dispensaries as charitable institutions kept up in the first instance for the medical treatment of the very poorest."

*Bogra.*—The dispensary was in class II throughout the year. Orders for its transfer to class I were issued in December last. It is under the management of the local municipality, and the committee held 11 meetings in 1881. All the superfluous servants attached to this dispensary were discharged during the year under the orders of government. There were treated 105 in and 3,803 out-patients, against 136 and 3,619 in 1880, the daily average sick being 3 and 30, against 4 and 32. The death-rate was 21·9 per cent. Nineteen major and 128 minor operations were performed. The dispensary was visited once by the commissioner, several times by the magistrate, and daily by the civil surgeon. The income during the year amounted to Rs. 1,343, of which Rs. 385 was received from government. The total expenditure was Rs. 1,277, and Rs. 227 was invested during the year. The civil surgeon gives the returns of the dispensaries at Bogra and Nowkhilla as correct, but has little to say for those of Sherepore.

*Nowkhilla.*—A first-class dispensary, entirely supported by Raja Promotho Nath Roy Bahadoor. It is managed by a local committee, and nine meetings were held during the year. In-door patients numbered 9 and out-door 1,771, against 33 and 1,758 in 1880; the daily average was ·59 in and 20 out-patients, against ·8 and 20 in 1880. The figures do not bear relation to the public health, as sickness is said to have been greater in the year under report than it has been for some years. The dispensary is chiefly maintained for the benefit of the servants of the estate. Nine major and 91 minor operations were performed. The total expenditure amounted to Rs. 864, of which Rs. 761 represents the cost of establishment.

*Sherepur.*—A second-class dispensary, under the municipality. The dispensary was allowed in July last a further trial up to end of December 1881, and if by that time steps were not taken to make it independent of government aid, it was ordered to be closed. The civil surgeon inspected the dispensary four times. The servant attached to the dispensary was ordered by the municipal commissioners to act as vaccinator in addition to his own duties, and the civil surgeon says that as the man had enough to do, and as this arrangement would bring discredit on vaccination, he represented the case to the magistrate, who ordered the appointment of a vaccinator. There were treated 3 in and 1,436 out-patients, against 10 and 1,856 in 1880. The daily average sick was ·9 and 12, against ·4 and 16. The income of the dispensary was Rs. 797, of which government paid Rs. 215, and the total expenditure amounted to Rs. 619. There are ample funds for the maintenance of the institution in class I. The dispensary has since been placed in class I.

**Pubna district.**

The civil medical officer's report is extremely meagre. The public health of the district has on the whole been good. There are two dispensaries in the district, both under the municipal management. The members of the sudder municipality do not, it is said, take much interest in the dispensary. The magistrate does not think that the dispensaries are appreciated by the public. The civil surgeon is disposed to trust the figures, but the averages are very suspicious.

*Pubna.*—A second-class dispensary, under the municipality, government contributing Rs. 300, or half the salary of the hospital assistant. There were treated 185 in and 2,113

out-patients, against 196 and 2,072 in 1880, the daily average being 6 and 26, against 9 and 30. The death-rate was 7·5 per cent., against 12·2 in 1880. There were performed 2 major and 130 minor operations. The dispensary was visited by the commissioner, the sanitary commissioner, frequently by the magistrate, and almost daily by the civil surgeon. The income of the dispensary amounted to Rs. 1,525, of which government contributed Rs. 304, and the total expenditure was Rs. 1,248. The local income of the dispensary is sufficient for its maintenance in class I without government aid.

*Serajgunge.*—A second-class dispensary, government contributing Rs. 720 a year, or half the salary of the assistant surgeon, whose retention in the dispensary has been allowed, until further orders, in government letter No. 840, dated 20th July 1881. It is under the local municipality. The dispensary was visited by the district magistrate once or twice, and several times by the sub-divisional officer; the civil surgeon inspected it twice. There were treated 77 in and 2,902 out-patients, against 50 and 2,420 in 1880, the daily average being 4 and 24, against 3 and 20. There were 16 deaths among the in-patients. Six major operations were performed. The income of the dispensary was Rs. 2,871, of which government paid Rs. 882. The total expenditure was Rs. 2,553, of which Rs. 1,955 represents the cost of establishment, and Rs. 325 the amount expended on building. A compounder on Rs 15 per mensem is maintained for this insignificant work.

**Darjeeling district.**

The health of the district would appear to have been satisfactory as compared with former years. There are four dispensaries in the district, the dispensary at the sudder station only receiving in-door patients. One of these is in charge of municipality, one under a local committee, and two are entirely supported by government. The managing bodies take interest in the dispensaries, which are said to be appreciated by the people.

*Darjeeling.*—A dispensary in class II, under the local municipality, government contributing the full grade pay of a first-class civil hospital assistant, viz. Rs. 55 per mensem, besides a hill allowance of Rs. 10 a month. Certain reductions in the establishment have been carried out during the year, and the special grant of Rs. 100 has been discontinued. 143 in and 3,868 out-patients were treated, against 161 and 3,065 in 1880. The daily average attendance was 10 and 15, against 7 and 13. The number of deaths was 25, or 17·4 per cent. Eight major and 78 minor operations were performed. The income of the dispensary was Rs 2,455, of which government contributed Rs. 972, and Rs. 1,158 was realized by European subscriptions. The total expenditure amounted to Rs. 2,455. The civil surgeon visited the dispensary almost daily; no visits were paid by civil officers.

*Kurseong.*—This dispensary is entirely supported by government, and is in class III of the revised rules. There were treated 1,606 out-patients, against 1,380 in 1880, the daily average being 15, in both the years. In-door patients (all police cases) numbered 30, against 29 in 1880, and the number of deaths was 11, against 8. Seventy-one minor operations were performed; no major operation. The total expenditure amounted to Rs. 1,250, of which Rs. 888 was expended on establishment. The dispensary was inspected twice by the civil surgeon, and once by the surgeon-general; no visits were paid by civil officers.

*Kalimpoong.*—This is also a third-class dispensary under the new rules, almost entirely supported by government. There is no committee. It was visited by deputy commissioner and the assistant commissioner. No visits were paid by the civil surgeon, and no explanation has been given. Out-door patients numbered 2,228, against 2,199 in 1880, and the daily average was 6 in both the years. Twelve minor operations were performed. The total expenditure amounted to Rs. 965. Rs. 56 was realized from European and native subscriptions.

*Siligoree.*—A second-class dispensary, under the management of a committee, who met three times during the year. It was transferred from Phansedewa to Siligoree sub-division. Government pays Rs. 25 a month to the civil hospital assistant, besides a hill allowance of Rs. 10. The dispensary was visited by the commissioner and the deputy commissioner; the civil surgeon inspected it once during the year. 10 in and 1,654 out-patients were treated during the year, against 24 and 1,092 in 1880. The daily average attendance was 16, against 9 out-patients. The in-door ward has been ordered to be closed. Rs. 1,338 was sanctioned by government during the year for the construction of a new dispensary building at Siligoree. Two major and 24 minor operations were performed. The total income was Rs. 1,177, including the balance Rs. 35 in hand on 1st January 1881, of which government contributed Rs. 602. The total expenditure amounted to Rs. 1,005.

**Julpigoree district.**

The report is submitted by the assistant surgeon who was appointed to the charge in October last, and contains marginal notes by the deputy commissioner. The public health of the district appears to have been somewhat better than the previous year. No outbreak of epidemic disease occurred during the year. Fevers prevailed with some intensity. There were three dispensaries in the district at the beginning of the year, viz. one in class I and two in class II. The dispensary at Boda was placed in class I during the year. The monthly returns have not been regularly submitted from the dispensaries, but, judging from the figures entered in the registers which were examined by the assistant surgeon, they do not appear to him to be untrustworthy.

*Julpaigoree.*—A second-class dispensary, under the management of a committee of which the deputy commissioner is the president. The committee met 12 times during the year. A first-grade assistant surgeon is in charge, who has the duties of a civil surgeon in the district. There were treated 208 in and 3,962 out-patients, against 207 and 3,766 in 1880,

the daily average being 9 and 23, against 8 and 23. There were 49 deaths among in-patients, or a rate of 23·5 per cent., against 19·3 per cent. in 1880. The deputy commissioner says that "it has been his experience that dispensaries, even the best managed, are not popular." Nine major and 101 minor operations were performed. The income of the dispensary was Rs. 2,675, of which government contributed Rs. 1,434. The total expenditure amounted to Rs. 2,638, of which Rs. 1,835 represent the cost of establishment. Government contribution is confined to the payment of the full salary of the assistant surgeon. The dispensary was visited by the commissioner of the division, and regularly by the assistant surgeon.

*Boda.*—Formerly a second-class dispensary, and placed in class I in September last. It is under the management of a committee, which held two meetings during the year. The monthly contribution of Rs 20 by the Maharajah of Cooch Behar has of late been raised to Rs. 44. The dispensary was visited once during the year by the medical officer. No visits were paid by his predecessor, who was in charge of the station for ten months. 1073 out-patients were treated, against 1,002 in 1880, the daily average being 8 in 1881. Fifty-three minor operations were performed. The income during the year was Rs. 649, of which government paid Rs. 123 before the dispensary was transferred to class I. The total expenditure was Rs. 681. A compounder is attached to the dispensary, who is paid Rs. 10 a month.

*Titalyah.*—A first-class dispensary, entirely supported from the Chuklajat estate of Cooch Behar from 1st April 1881. A committee exists, but no meetings were held during the year, the current duties being conducted by the secretary. 28 in and 1,843 out-door patients were treated, against 26 and 1,497 in 1880. The daily average attendance was ·95 in and 16 out-patients, against ·92 and 16. The death-rate was 21·4 per cent. Thirty-six minor operations were performed. The total expenditure amounted to Rs. 797. Rs. 81 was paid by government, viz. Rs. 75 as salary of the hospital assistant for three months, and Rs. 6 as the cost of forms. The dispensary was visited once by the deputy commissioner, and once by the medical officer.

*Alipore Buxa.*—This dispensary is entered for the sake of classification in the district of Julpigoree. It is under the supervision of the military surgeon of Buxa Bhootan, who also conducts the civil duties of the station, and by whom the report has been submitted. It is a sub-divisional dispensary under the management of a local committee, and is said to be much appreciated by the people, but the attendance is too small to justify this conclusion. There was only one meeting of the committee. Government pays Rs. 10 a month as extra allowance to the civil hospital assistant of the sub-division. The number of patients treated was 6 in and 501 out-door, against 11 and 649 in 1880, the daily average being ·09 and 5, against ·34 and 8. The dispensary was visited once by the divisional commissioner, and twice by the deputy commissioner of Julpigoree. The civil surgeon inspected it thrice. The total income of the dispensary amounted to Rs. 521, including Rs. 237, the balance on 1st January 1881, and the total expenditure was Rs. 266.

## Dacca Division.

**Dacca distrcti.**

The report contains useful marginal notes by the magistrate and commissioner. The public health of the district, judging from the registered mortality, was worse than 1880, but the fact is not established. Fevers and cholera were prevalent in many parts of the district during the year. There is a great want of good water in many localities away from the river. There were ten dispensaries working during the year, five of these receive both in and out-door patients. Two of these institutions were placed in class I during the year. Thus at the close of the year there were three dispensaries in class I and seven in class II. The total number of patients treated in all the dispensaries including the Mitford hospital was 1,896 in and 47,166 out-door, against 1,743 and 47,092 in 1880. The statistics of the Mitford hospital, the civil surgeon considers, are thoroughly reliable. Of the dispensaries in the interior, he is of opinion that the figures are much more reliable under the present improved system of inspection. This conclusion is affected, however, by the scarcity of inspection in 1881, and it is noted that the old system of including represented persons is followed in the returns. Nine of the dispensaries are under the management of local committees, and one under the municipality. Except the Joydebpore dispensary, all the institutions were inspected once by the civil surgeon. Pressure of work in the station prevented him from visiting the outlying dispensaries oftener, most of which can only be conveniently reached by boat when the river is full and the country flooded.

*Mitford Hospital.*—The civil surgeon says that the hospital must be treated as a special institution, and cannot be classified with ordinary charitable dispensaries. There is no reason for this. As the hospital is aided by government, it must be placed as a second-class institution under the new rules at least for 1881. It is under the management of a committee, of which the commissioner is president, and the judge, magistrate, and other officers, as well as European and native gentlemen, are members. The committee met thrice during the year. The hospital was visited by His Honor the Lieutenant-Governor and staff in August; the civil surgeon paid daily visits. First-class apothecary G. H. Campbell, who is very favourably reported on by the civil surgeon, acted as house-surgeon throughout the year. The teachers of the Dacca medical school are also attached to the hospital for duty, who are said to be experienced and first-rate officers There were treated 1,634 in and 19,138 out-patients, against 1,471 and 19,320 in 1880, the daily average

attendance being 81 and 135, against 94 and 142. The number of in-door cases treated is the highest on record since the establishment of the hospital. The death-rate was 14·1 in 1881, against 14·3 in the previous year. The mortality has been lower in these two years than in any of the eight preceding years. Cholera was more prevalent in the city than the previous year. As usual, malarious fevers headed the list. The total number of major operations was 168 against 149 in 1880, the death-rate being 10·4 per cent. against 13·1. 3,838 minor operations were performed. The total income of the hospital was Rs. 22,618, viz., cash balance on 1st January, Rs. 6,795; special allowance given by government and the cost of forms, Rs. 5,140; from local or other funds, Rs. 279; from municipal funds, Rs. 3,600; interst on investments, Rs. 6,804. The total expenditure amounted to Rs. 15,503. Government pays the half cost of Europe medicines, and the entire cost of medical stores obtained from the store department in 1881 was Rs. 1,577, which will be charged in the accounts of 1882. Rs. 3,000 was invested during the year, and the amount of invested capital at the end of the year was Rs. 1,69,000. The cost of diet including extras was one anna seven pie, against one anna eight pie in 1880. The accounts are checked by the commissioner of the division. The hospital buildings have been placed on the books of the public works department with the sanction of government, and estimates for necessary repairs, which were much needed, are being prepared. The new female ward, which was commenced in July 1880, made little progress during the year. The estimated cost is Rs. 27,094. Rs. 20,000 was given by Kumar Rajender Narain Rai of Joydebpore for the purchase of the site for the ward, and Nawab Ashanwoollah Khan has paid the money for the building. The town filtered water has been laid on to the hospital through the liberality of Baboo Protab Chunder Dass. As stated in my report for 1880, the institution is very valuable both as a medical charity and a school.

*Naraingunge*—A dispensary in class II, government contributing Rs 300 a year, or half the salary of the hospital assistant. In government letter No. 915, dated 8th August 1881, enquiries were made as to whether there was any objection to the dispensary being placed in class I, the native doctor receiving the grade pay from the dispensary, and government paying him an extra allowance of Rs. 10 a month for the charge of the station. Final orders have not been passed during the year. The dispensary is under the management of a committee, who met three times. It was visited twice by the district magistrate and once by the sub-divisional officer; the civil surgeon paid one regular visit. There were treated 74 in and 4,112 out-patients, against 60 and 4,022 in 1880, the daily average being nearly the same as in 1880. Eighteen deaths occurred among in-patients against 7; of these, cholera caused 6 deaths against 3. 16 major, chiefly incisions, and 277 minor operations were performed. The income during the year amounted to Rs. 1,189, of which government contributed Rs. 313, and the total expenditure was Rs. 1,233, of which Rs. 939 represent the cost of establishment. One compounder and a dresser are employed for the insignificant work; the latter is certainly not needed.

*Moonsheegunge*—A sub-divisional dispensary in class II, under a committee. It was proposed in August last to place the dispensary in class I, government paying the hospital assistant of the sub-division his grade pay, and the dispensary paying him the additional allowance of Rs. 10 per mensem. This proposal is certainly advantageous to the committee, who pay the entire salary (Rs. 30) to the native doctor. The committee met four times during the year, and the civil surgeon inspected once. The dispensary is of nominal usefulness. There were treated 20 in and 2,537 out-patients, against 29 and 2,348 in 1880, the daily average being ·93 and 12, against ·85 and 11. Injuries were the chief causes of admissions among in-door patients. Skin diseases were most prevalent among out-patients Thirteen major and 428 minor operations were performed. The income from local sources amounted to Rs. 195 only, and the total expenditure was Rs. 383. The orders of government on the reclassification of this dispensary were awaited at the end of the year. The dispensary has since been placed in class I, government paying the grade pay of the hospital assistant, and the dispensary an extra allowance of Rs. 10 a month.

*Simoiya.*—This is a useless institution under class II of the new rules. Government contributes Rs. 240 a year towards the pay of the hospital assistant. The government in their letter No. 157, dated 13th February 1881, remarked that, "looking to the meagre attendance at the dispensary, government cannot continue to give pecuniary aid to such an institution. If the manager, however, wishes to keep the dispensary under class I of the rules, government will have no objection." Final orders on the reclassification of the dispensary were not issued during the year. There were treated 2,874 out-patients with a daily average of 18, against 2,695 and 19 in 1880. No major operation; minor operations numbered 709, a rather unusual number, but the prevailing diseases are said to be abscess, ulcers, &c. The income from local sources was Rs. 464, and the total expenditure was Rs. 710, of which Rs. 519 represents the cost of establishment. The supporter of the dispensary died during the year, and it was thought at one time that it would have to be closed. The dispensary is under a committee, which met three times during the year. The civil surgeon paid one visit. The dispensary has since been closed.

*Baliati*—A second-class dispensary, government contributing Rs. 15 per mensem, or half the salary of the hospital assistant. A nominal committee exists, who met once during the year, but the supporter of the institution really does all the work. Money is needlessly expended here on establishment. The establishment, which should consist of a hospital assistant and a cooly or sweeper, includes compounder, dresser, apprentice, cooly, and sweeper.

The number of out-patients treated was 3,153, against 2,939 in 1880, or a daily average of 24 and 23 respectively. Goitre is very common here. 101 minor operations were recorded. The income from local sources was Rs. 480, and the total expenditure amounted to Rs. 698. The private funds are sufficient for the needful wants of the institution. The civil surgeon inspected once.

*Manickgunge.*—Transferred to class I during the year, government paying the grade pay of the hospital assistant for the charge of the sub-division, and the dispensary paying him an extra allowance of Rs. 10 a month. It is under a committee, by whom eleven meetings were held. Once inspected by the civil surgeon. 13 in and 2,626 out-patients were treated, against 17 and 2,298 in 1880, the daily average being ·37 and 26, against ·73 and 24. Of the 13 in-patients, 8 were from injuries. One major (removal of tumour) and 161 minor operations were performed. The total income amounted to Rs. 868, inclusive of the balance (Rs. 422) on 1st January 1881, and the total expenditure was Rs. 462.

*Joydebpore.*—Placed in class 1 during the year. The dispensary is supported by Kumar Rajendra Narain Roy Chowdhry. A nominal committee exists, which met once only during the year. Two visits were paid by the civil surgeon. The civil hospital assistant is paid Rs. 60, of which the government, before the institution was transferred to class I, paid Rs. 30 per mensem. 22 in and 2,664 out-patients were treated, against 22 and 2,606 in 1880, the daily average being ·49 and 15, against ·51 and 16. There were 5 major and 213 minor operations. The income from local sources was Rs. 720, and from government Rs 274. The total expenditure was Rs 953, of which Rs. 843 was expended on establishment.

*Bhaggokool.*—A second-class dispensary, government contributing Rs. 480 a year, or the full salary of the hospital assistant. The dispensary is of very little use. It was proposed in August last to transfer the dispensary to class I if the proprietors agree to the measure; if not, it should be closed. A reply from the committee is awaited. No regular meetings were held during the year. Once inspected by the civil surgeon and the magistrate. There were treated 2,303 out-patients with a daily average attendance of 11, against 2,452 and 12. Seven major and 142 minor operations were performed. The income during the year was Rs. 1,202, of which government paid Rs. 482, and the total expenditure was Rs. 726. The dispensary had a cash balance of Rs. 505 at the end of the year. The dispensary has since been placed in class I.

*Maluchi.*—A first-class dispensary, supported by an estate and managed by a committee, by whom 18 meetings were held. An assistant surgeon is in charge. The dispensary was visited by the magistrate, deputy magistrate, and deputy postmaster-general; the civil surgeon inspected once. 133 in and 4,968 out-patients were treated, against 140 and 4,504 in 1880, the daily average being 7 and 39, against 10 and 37. There were 11 deaths, or 8·2 per cent. Three major and 101 minor operations were performed. The total expenditure was Rs. 3,014, including Rs. 11, the cost of forms supplied by government.

*Joinsher.*—A second-class dispensary, under a committee, by whom six meetings were held. There were treated 2,791 out-patients, against 3,908 in 1880, the daily average being 22 and 24 respectively. The falling off in attendance is said to be due to greater healthiness in the year. Four major and 386 minor operations were performed. The income from local sources was Rs. 443, and from government Rs. 187. The total expenditure was Rs. 631. The private income of the dispensary is sufficient for its needful wants.

**Furreedpore district.** The year 1881 is said to have been more unhealthy than the previous year. There was a supposed increase of mortality from all causes, especially from cholera and fever, but proof is wanting. There are four charitable dispensaries in the district, of which the dispensary at Goalundo is under the supervision of a separate medical officer. The three dispensaries under the civil surgeon receive in and out-door patients, and are in charge of civil hospital assistants. Two are in class II, and one transferred to class I during the year. The figures of the outlying dispensaries cannot be regarded with confidence. It is said that very little interest was shown by the managing bodies. The Goalundo dispensary is maintained in class I.

*Furreedpore.*—A dispensary in class II, government contributing Rs. 180 a year, or half the salary of the hospital assistant. It is under the management of the local municipality. 224 in and 6,272 out-patients, against 230 and 6,031 in 1880, the daily average being 9 and 17, against 8 and 23. The death-rate was 4 per cent., against 2·6. There were 13 major and 173 minor operations. The dispensary was inspected by the commissioner and inspector of schools; the civil surgeon paid daily visits. The income of the dispensary from local sources was Rs. 1,821 and Rs. 301 from government. The total expenditure was Rs. 2,543, of which Rs. 1,350 was expended on buildings and excavating a tank. The local income is more than enough for the maintenance of the institution in class I. The government aid is not required.

*Madaripore.*—A sub-divisional dispensary, transferred to class I during the year. It is managed by the local municipality, by whom two meetings were held. Twice visited by the civil surgeon. The civil hospital assistant receives Rs. 10 from dispensary fund, and his grade pay is paid by government for the charge of the sub-division. There were treated 134 in and 3,208 out-patients, against 54 and 3,197 in 1880, the daily average being 2·9 and 8, against 1·5 and 10. Fevers were prevalent rather epidemically at Madaripore, but only 466 cases were treated in the dispensary, a number which the civil surgeon does not consider satisfactory. 92 minor operations were performed. The total expenditure was Rs. 636, of which Rs. 426 was expended on establishment.

*Lonesing.*—A second-class dispensary, under the management of a committee, by whom nine meetings were held. Twice visited by the civil surgeon. Superfluous servants were discharged during the year. There were treated 9 in and 2,746 out-patients, with a daily average of ·27 and 11, against 5 and 2,297, and a daily average of ·3 and 12 in 1880. Three major and 213 minor operations were performed. The income of the dispensary was Rs. 698, of which Rs. 218 was paid by government. The total expenditure was Rs. 598. Orders were issued in September last that the dispensary should be closed on 31st December 1881 unless it were carried on without pecuniary aid from government, the small attendance not justifying the continuance of the payment of half the salary of the native doctor (Rs. 180).

*Goalundo*—A sub-divisional dispensary in class I, under the supervision of the civil medical officer, Goalundo. It is under the management of a local committee, who met three times during the year. The sub-divisional officer inspected several times, and the civil surgeon paid frequent visits. It was visited also by the district magistrate. There were 113 in and 1,345 out-patients, against 140 and 1,615 in 1880, the average daily attendance being 4 and 7, against 4 and 10. Three major and 70 minor operations were performed. The dispensary is said to be fairly appreciated by the people. Emigrants largely contribute to the admissions. The death-rate was 30 per cent., against 26 ; it is ascribed to the large proportion of moribund persons admitted. The total expenditure was Rs. 1,142, of which Rs. 600 was expended on establishment. The civil hospital assistant is paid Rs. 10 a month from dispensary fund, government contributing his grade pay for the charge of the sub-division.

**Backergunge district.**

The report is complete and interesting. Useful marginal notes are appended by the magistrate. The year under review was not on the whole as unhealthy as 1880, nor can it be said to have been a particularly unhealthy year. A large proportion of the apparently increased mortality is said to be due to improved registration. There was an increase of fever as compared with 1880, but the civil surgeon believes that many of the cases of so-called "fever" are cases of pneumonia and pleurisy, which are ignorantly reported as fever. There was no severe epidemic of any disease during the year. There were four dispensaries in the district at the beginning of the year, of which the dispensary at Patuakhally was closed in June. Except the Matbaria, all the dispensaries are aided by government. The civil surgeon thinks that the figures of attendance have been somewhat more correctly given in 1881 than in 1880. He notices, however, that the house-patients consist largely of cases of very trivial injury received from the police. The magistrate confirms this, and considers it to be a method of converting trivial injuries into cases of grievous hurt. He has issued prohibitory orders. The figures of the sudder dispensary may be entirely relied on. All the dispensaries are under the management of local committees. The civil surgeon states that "the educated class of natives of Burrisal and the neighbourhood are very lukewarm in their disposition towards the dispensary, and show very little interest in the work done."

*Burrisal*—A second-class dispensary, under the management of a committee, with the district magistrate as president and the civil surgeon as secretary. Four meetings were held during the year. The dispensary was occasionally visited by the magistrate and the judge, twice inspected by the commissioner, and daily by the civil surgeon. His Honour the Lieutenant-Governor paid a visit in August last. There were three assistant surgeons in charge of the dispensary at different periods of the year. The falling off in attendance is attributed to the unpopularity of the medical subordinate. There were treated 296 in and 8,848 out-patients, against 403 and 10,739 in 1880. The daily average attendance was 9 and 42, against 13 and 52. There were performed 35 major operations, against 32 in 1880. Government contributed to this dispensary Rs 1,800 a year, or the full salary of a second-grade assistant surgeon. The present payment is confined to half the salary of a third-grade man (Rs. 60 a month), but in consideration of a second-grade assistant surgeon now being in charge of the dispensary, he has been allowed to draw his pay in the proportion of Rs. 90 from government, and Rs. 60 from dispensary fund till an opportunity offers to relieve him by a lower grade man. The income from local sources was Rs. 2,256, and from government Rs. 1,066 ; the total expenditure was Rs. 2,394. Rs. 1,131 was invested during the year. The local income of the dispensary is nearly sufficient for its maintenance independently of government aid. The total invested capital at the end of the year was Rs. 4,332. The new female ward has been completed during the year at the cost of Nawab Ashanwoollah. There is no fund, it is said, to meet the cost of an establishment required for it, and the cost of erecting a surrounding wall. In the event of the funds not forthcoming, the civil surgeon suggests "the building being let or sold as a public library until the state of native society in Burrisal is sufficiently advanced to support and recognize the use of a female hospital." The magistrate, while agreeing generally with the civil surgeon, does not think that the building, which has been given for a definite purpose, can be disposed of without consulting the donor.

*Bhola*—A sub-divisional dispensary in class II, government contributing Rs. 10 a month as extra allowance to the hospital assistant for the charge of the dispensary, besides his grade pay from the sub-division. It is managed by a committee, by whom two meetings were held. The district magistrate and the civil surgeon inspected the dispensary twice. There were treated 35 in and 1,102 out-patients, against 55 and 1,407 in 1880. The daily average attendance was ·73 against 1·4 among in-patients, mostly police cases, and 9 against 11 in out-patients. Minor operations numbered 48; no major operation. The dispensary is very little used, but its financial condition is very good, the estates improvement fund being the chief source of income here. The income from local sources in 1881 was Rs. 781, which is

more than enough for the legitimate wants of the institution. A peon at Rs. 6 per mensem is needlessly maintained. The civil surgeon states that "the peon is supposed to collect subscriptions, but I believe does very little work for his pay, and is a useless servant." The dispensary may pass into class I as a sub-divisional institution, the extra allowance to the hospital assistant being paid from its fund.

*Matbaria.*—A first-class dispensary, maintained by government on the Khasmehal Toshkhali Estate. Rs. 1,000 is annually contributed out of the 3 per cent. improvement fund. It is under a local committee, which met three times during the year. The magistrate and the civil surgeon inspected twice. Out-patients numbered 1,817, against 805 in 1880, the daily average being 13 against 9. These figures, the civil surgeon says, are suspicious, and he does not think trustworthy. Very little interest is taken by the committee, and it is believed they have a grievance in not being allowed a compounder. The late compounder is said to be "some relative of one of the committee members or hospital assistant in charge, and was not at all necessary for the small amount of out-patient work that goes on." The magistrate on this remarks that "it was on this account, no doubt, that an increase of more than double has been shown in the number of out-patients treated in 1881." The dispensary is of no use to the people; it should be closed at once. Hitherto money was wasted on establishment and on other items. The total expenditure was Rs. 563, and the cash balance at the end of the year amounted to Rs. 1,633. Orders have since been issued for the closure of the dispensary.

*Perozepore.*—A sub-divisional dispensary in class II, government contributing Rs. 10 per mensem as extra allowance to the hospital assistant on account of the dispensary. Twice inspected by the magistrate and the civil surgeon. It is managed by a committee, by whom four meetings were held. There were treated 103 in-patients against 115 in 1880, the daily average being 3·9 against 3·4. The civil surgeon thinks too many police cases are admitted as in-patients, many of whom could have their wounds attended to as out-patients. The magistrate has issued orders on the subject. He states that "it is a common practice to allow police patients to stop on in order that their cases may be made out to be technically grievous hurt. A charitable dispensary, however, is not to be allowed to serve as a manufactory for evidence." Out-patients numbered 1,998 against 2,510 in 1880, with a daily average of 9 and 16. Sixty-one minor operations were performed. The income of the dispensary from local sources was Rs. 487, and the total expenditure was Rs. 497. The expenditure on Europe medicines was very high for the work done. It is said that the hospital assistant receives Rs. 5 from government for the charge of the sub-division, besides his grade pay, and the extra allowances for the dispensary and the subsidiary jail. This is irregular. The private funds of the institution are well able to bear the charge of Rs. 120 a year paid to the native doctor, and it should be made a 1st class sub-divisional dispensary, government paying the grade pay for the charge of the sub-division, and the dispensary an extra allowance of Rs. 10.

**Mymensingh district.** This report, like the last, is complete and interesting. It contains not only a full record of dispensary affairs, but a critical examination of them, which shows the great interest taken in the subject by the civil surgeon. The commissioner remarks, with perfect truth and force, that "there are more dispensaries in this district than can be properly supervised. It is advisable to require that a considerable number of them be closed or placed in class I. Something has been done, but apparently not enough" The public health of the district, as it appears from the recorded deaths, was worse than in 1880, but the figures given by the police are, the civil surgeon says, so grossly inaccurate as to be utterly worthless for the purposes of comparison. He adds that, "apart from statistics, there appears to be a general consensus in opinion that the year compared favourably in point of health with the previous year." There were 16 dispensaries in the district, of which the dispensary at Nagarpore was closed in May 1881. Three of these receive in-door patients At the end of the year there remained 15 dispensaries, viz., five in class I and ten in class II, two being transferred to class I during the year. Regarding their inspection by civil surgeon, the magistrate observes that "it is almost impossible for the civil surgeon to visit all the dispensaries in the district, scattered as they are over an area of 6,000 square miles, twice in each year without necessitating a very prolonged absence from the sudder station. During the past year 1881, there was very great mortality in the jail at head-quarters, and the civil surgeon's presence at head-quarters was more than ever required. This will account for any failure on Dr Moorhead's part to make double inspections of each dispensary during the year." The figures of attendance were verified with monthly returns and the number present during the time of the civil surgeon's inspection. He considers them to be improved on the whole, but gives examples of the contrary. Two dispensaries (Mymensingh and Tanjail) are in charge of assistant surgeons, and the rest are under civil hospital assistants. The managing bodies as a rule, in the civil surgeon's opinion, take but a very superficial interest in the dispensaries, but he is glad to say that, except in the cases of three or four, the dispensaries appear to be well appreciated by the people. This is not, however, supported by the recorded attendance.

*Mymensingh.*—A dispensary in class II, government contributing Rs. 720 a year, or half the salary of the assistant surgeon. It is managed by a committee consisting of the civil officers of the district, the civil surgeon, and native gentlemen. Four meetings were held during the year, and the civil surgeon says that it was considered unnecessary to hold ordinary meetings monthly as the dispensary was constantly under the eye of the civil

surgeon. It was visited once each by the magistrate, the judge, the assistant magistrate, and the inspector of schools. The civil surgeon paid frequent visits. The number of in and out-patients treated was respectively 175 and 3,857, as compared with 195 and 3,535 in 1880, the daily average being 8 and 35, against 9 and 32. The small number of patients attending the dispensary, as compared with sudder dispensaries in other districts, was, it is said, due to the smaller proportion of sick-poor in this locality. There were 29 deaths among in-patients, against 34 in 1880. The civil surgeon says that mortality has always been high in the sudder dispensary, and this has been owing to the large number of patients, many of whom, up-country coolies, brought to the hospital in an almost moribund condition. 13 major and 295 minor operations were performed with no death. The income from local sources was Rs 1,850, and from government Rs. 665. The total expenditure was Rs. 2,550, of which Rs. 1,854 represents the cost of establishment, and Rs. 330 was expended on building. The invested capital at the end of the year was Rs. 15,370. Superfluous servants are maintained here. The private funds of the dispensary are quite enough for its maintenance in class I.

*Sherpur.*—A second-class dispensary under a committee, who met twelve times during the year. Government contributes the full salary of the native doctor, or Rs. 480 a year. There were treated 678 out-patients against 773 in 1880, the daily average being 8 against 10. On this the civil surgeon remarks that "it is doubtful whether even this small average is not exaggerated. When I visited the dispensary on 7th December, only one patient attended during the time I remained there, viz., from 8 to 11 A.M. The dispensary is useless to the people, and is not deserving of government aid As usual, the civil hospital assistant ascribes the small attendance to the improved health of the people." The prevailing diseases were goitre and malarious fevers. One major and 47 minor operations were recorded. The income from local sources was Rs 372, and from government Rs. 485; the total expenditure was Rs. 830, of which Rs. 704 was expended on establishment. The useless servants were discharged during the year. Visited once each by the civil surgeon and the sub-divisional officer.

*Ramgopalpore.*—A second-class dispensary, government contributing Rs. 180, or half the salary of the hospital assistant. A nominal committee exists, but no meetings were held during the year. Visited twice by the civil surgeon, and once by the assistant magistrate. Out-patients numbered 2,052, against 2,496 in 1880, the daily average being 15 and 21. The figures are not trusted. A private dispensary has been opened a few hundred yards distant, and this, no doubt, affected the attendance. Three major and 83 minor operations were performed. It is said that Baboo Kashee Kishore Roy Chowdry has signified his consent to pay the whole cost of the dispensary, which may pass into class I. The income during the year, including the cash balance (Rs. 63) on 1st January 1881, was Rs. 726, of which government paid Rs. 234. The total expenditure was Rs. 693. The dispensary has since been transferred to class I.

*Tanjail.*—Transferred to class I during the year. The dispensary is governed by a committee, which met three times. Visited once each by the magistrate and the civil surgeon. An assistant surgeon is in charge, who received his entire salary Rs 120 per mensem from dispensary funds. There were treated 159 in and 2,337 out-patients, against 165 and 2,107 in 1880, the daily average being 7 and 19, against 7 and 26. Nine deaths occurred among in-patients, against 8 in 1880, three of these being due to respiratory affections and two to dysentery. Ten major and 119 minor operations were performed. The total expenditure was Rs. 2,562. Government paid Rs. 80, viz. Rs. 21 as the cost of registers and forms, and Rs. 59 for diet of police cases.

*Pagulldighee.*—A second-class dispensary, under a committee, who met five times during the year. Once visited by the civil surgeon. Government contributes Rs. 180 a year, or half the salary of the civil hospital assistant. There were treated 1,474 out-patients, including persons represented by friends, against 1,309 in 1881. The daily average attendance, excluding the represented persons, was 7 against 12; the latter figure includes represented attendance. Two major and 72 minor operations were performed. The dispensary is useless to the public. It should either be closed or transferred to class I, for which there are ample funds. A superfluous compounder and shop-cooly are employed, who should be discharged at once, and a sweeper or cooly on Rs 3 taken in their place. The income from local sources was Rs. 540, and government contributed Rs. 215. The total expenditure was Rs. 751, of which Rs. 570 was expended on establishment. The expenditure on other heads is also too high for the work done.

*Jamurki*—A first-class dispensary, managed by Mr. Weatherall, agent of Nawab Ashanoolla of Dacca. No visits were paid by the civil surgeon or by the civil officers. A private native doctor was employed here who, it is said, applied for leave in December last, but before he received a reply he made over charge of the dispensary to the compounder and went away. 22 in and 2,090 out-patients were treated, against 76 and 2,923 in 1880, the daily average being 1 and 13, against 5 and 28. There was a marked decrease in attendance, which is partly accounted for by the fact that for nearly four months the dispensary was in charge of the compounder when the former native doctor was on leave. There was one death only. Five major and 148 minor operations were performed. The total expenditure was Rs. 1,127, including Rs 20, being the cost of forms supplied by government.

*Jhawail*—Transferred to class I from 1st March 1881. It is under the management of the local representatives of the supporter, Maharani Surut Soondry Debya of Rajshahye

The civil surgeon inspected once; no visits were paid by the civil officers. 1,226 out patients were treated against 1,190 in 1880, with a daily average of 14 against 17. 224 cases of goitre were treated. One major and 35 minor operations were performed. The income during the year was Rs 891, of which government paid Rs. 59. The total expenditure was Rs. 869, of which Rs. 726 was expended on establishment.

*Kerotia*—A first-class dispensary. A nominal committee exists, which met twice during the year, but the affairs of the dispensary are practically managed by the sole supporter, Sadat Ali Khan. No visits were paid by the civil surgeon or by the civil officers. There were registerd 3,025 out-patients with a daily average of 25, against 2,904 and 30 respectively in 1880. The figures are untrustworthy. 14 major and 163 minor operations were recorded; most of the former, the civil surgeon thinks, are imaginary. The total expenditure was Rs. 1,347. At the end of the year there was a cash balance of Rs. 2,092.

*Hybutnugger*—A second-class dispensary under a committee, which, it is said, held 14 meetings during the year. Dr. Moorhead remarks that "the supervision exercised was very superficial, for I found when I visited the dispensary in June that the hospital servants had not been paid for ten months previously, and that no subscriptions had actually been realized from November, though the books showed no arrears. The floating balance had steadily increased though no money had been actually received. The returns had been duly signed by the chairman of the committee." The abuses brought to light with regard to this dispensary were made the subject of a special representation to government, and in February 1882, the deputy magistrate was reprimanded for countenancing the submission of false returns, and the hospital assistant was punished with supernumerary duty. The dispensary was occasionally visited by the sub-divisional officer, and once by the civil surgeon. It is a sub-division. There were treated 958 out-patients against 699 in 1880, with a daily average of 13 and 12, or each patient attended the dispensary five times during the year. 61 minor operations were performed; no major operation. The work here is insignificant, and the dispensary is useless as a medical charity. It should be closed or maintained in class I. The income from local sources was Rs. 480, and from government Rs. 115, and the total expenditure was Rs. 618, Rs. 460 representing the cost of establishment. Government pays Rs. 180 a year, or half the salary of the hospital assistant.

*Netrokona*—A second-class dispensary, government contributing Rs. 180, or half the salary of the hospital assistant. It is managed by a committee, which met nine times during the year. The supporter, Sreemutty Bissessuree Dobya Chaudhurani, has signified her consent to pay the whole expenditure of the institution. A sub-division has been opened at Netrokona. There were 3 in and 1,705 out-patients treated, against 16 and 1,725 in 1880, the daily average being ·1 and 14, against ·4 and 15. Five major and 152 minor operations were performed. The income during the year was Rs. 730, of which government contributed Rs. 220; the total expenditure was Rs. 715, of which Rs. 568 was expended on establishment. The dispensary has since been placed in class I.

*Jamalpore.*—The dispensary is in class II, under the management of a committee, who held three meetings. Visited occasionally by the sub-divisional officer, and once by the civil surgeon. 778 out-patients were treated against 730 in 1880, the daily average being 4 and 7. The removal of the dispensary to a suitable site is under consideration. Two major and 18 minor operations were performed. The dispensary is quite useless to the people, and should be closed. Its existence can only be defended in consideration of the place being a sub-division; and the private funds of the dispensary being ample for its maintenance in class I. The total income was Rs. 833, of which government paid Rs. 214. The total expenditure was Rs. 766, of which Rs. 680 was expended on establishment. The dispensary has since been placed in class I.

*Muktagacha.*—A second-class dispensary, under a committee, which held two meetings. It was visited three times by the civil surgeon. There were treated 1,964 out-patients against 1,576 in 1880, with a daily average of 17 against 13. Four major and 119 minor operations were performed. A full report on the condition of this dispensary was submitted in December last, which has since been placed in class I. The income during the year was Rs. 769, including Rs 222 contributed by government, and the total expenditure was Rs. 718. The invested capital at the end of the year was Rs. 12,416. The dispensary has since been placed in class I.

*Bazitpore.*—A second-class dispensary, under a committee, which held only two meetings during the year. No visits were paid by the civil surgeon or by the civil officers. Government contributes Rs. 180, or half the salary of the hospital assistant. Out-door patients numbered 1,019 against 1,070 in 1880, the daily average attendance being 6 against 9. Fifty-nine minor operations were performed. This shows that either the dispensary is not wanted or appreciated by the people The income from local sources was Rs. 477, and from government Rs. 260. The superfluous compounder was discharged during the year. The total expenditure was Rs. 707. The expenditure on all the heads was too high for the work done. The private income of the dispensary is quite enough for its maintenance in class I.

*Ambaria.*—A dispensary in class II, government contributing Rs. 300 a year, or half the salary of the hospital assistant. A nominal committee exists, but no meetings were held during the year. 3 in and 1,248 out-patients were treated, against 5 and 706 in 1880, with a daily average of ·3 and 16, against ·03 and 14. The dispensary is not much used by the people, but the civil surgeon considers the attendance satisfactory, the population being

very sparse, only about 200 to the square mile, and there being no roads. Sixteen minor operations only were performed. The income of the institution from private sources was Rs. 689, and from government Rs. 305. The total expenditure was Rs. 1,085, which is too high for the work done. The local income of the dispensary is more than sufficient for its maintenance in class I.

*Kukurmari*—A first class dispensary governed by a committee. Three meetings were held. No visits were paid by the civil surgeon or by the civil officers to the dispensary, which is situated in an exceedingly out-of the-way place, to which there is no road. A private native doctor is engaged here. Only 306 out-patients were treated as compared with 653 in 1880, the daily average being 7 and 17. Fifteen minor operations were performed. The total expenditure was Rs. 701, of which Rs. 618 represents the cost of establishment.

### Chittagong Division.

**Chittagong district.**

*Chittagong.*—There is only one dispensary in the district at the central station. The public health on the whole was good, though the death-rate was somewhat higher than in 1880. The Chittagong dispensary is in class II, under the management of the local municipality. Government pays Rs. 720 a year, or half the salary of the assistant surgeon who is in charge. The civil surgeon paid daily visits. A large establishment is maintained, costing Rs. 81-12-0 per mensem. 322 in and 6,380 out-patients were treated, against 274 and 6,481 in 1880; the daily average being 13 and 34, against 11 and 36. The death-rate was 12·4 per cent., against 10·2 in 1880. 20 major and 375 minor operations were performed. The civil surgeon states that "the Chittagonian has but a poor opinion of either English medicine or surgery, and submits with great reluctance to part with any portion of himself. He is a proud man, and does not like the term "charitable" applied to the dispensary. He loses caste by attending, and so prefers keeping a family *kobiraj*." The total expenditure was Rs. 4,314, of which Rs. 2,435 was expended on establishment, and Rs. 323 on buildings. Government contributed Rs. 863. The income from local sources was Rs. 4,392. There are ample private funds for the maintenance of the institution in class I. The amount remaining at the end of the year in the savings bank was Rs. 2,220.

**Tipperah district.**

The public health of the district was on the whole good, though the mortality exceeded that of 1880. There were six dispensaries in the district, of which the dispensaries at Chandpore and Doolye were closed during the year. The latter institution is maintained under the private management of Nawab Ashanwoollah. There were four dispensaries working at the end of the year, all in class I, two being transferred during the year. There were treated in all the dispensaries, including Chandpore, 94 in and 4,581 out-patients, with a daily average of 3 and 57, or each patient attended the dispensary five times during the year. The assistant surgeon in charge of the district has had the figures tested (but only with monthly returns), and has found them reliable in the cases of two dispensaries. The attendance at the Brahminbariah dispensary was calculated by the number of days for which medicines were supplied. All the institutions are in charge of civil hospital assistants. The managing bodies are said to take a fair amount of interest in dispensaries, but the people do not appreciate the English mode of treatment. In two of these dispensaries in-door patients are treated.

*Comillah.*—Transferred to class I during the year, the municipality undertaking to maintain it independently of government aid. Two special meetings were held. Visited daily by the medical officer. A third-grade hospital assistant is in charge, who receives Rs. 20 as grade pay from the municipality, and an extra allowance of Rs. 10 from government for conducting the duties of the station during the absence of the civil medical officer. 75 in and 1,535 out-patients were treated, against 70 and 1,518 in 1880; the daily average being 3 and 13, against 3 and 10. There were 9 deaths against 11. Four deaths were caused by injuries, 10 major and 123 minor operations were performed. The total expenditure was Rs. 2,423, of which Rs. 1,086 was expended on building. It is said that the new dispensary building has been sold on account of its distance from the town, and that a suitable site has been selected. Government paid Rs 264 in 1881.

*Brahminbariah.*—Placed in class I during the year, under the orders of government conveyed in letter No. 1013, dated 29th August last. The orders of government (*vide* letter No. 1786, dated 19th December 1881) were that as the subscribers did not wish to place the dispensary under the rules, the medicines purchased with the funds supplied by them might be distributed to the patients with the assistance of the hospital assistant of the sub-division. The civil medical officer does not, however, take any notice of this order, and treats this dispensary as in class I. It is governed by the local municipality. No special meetings were held. Two visits were paid by the medical officer. 19 in and 879 out-patients were treated, with a daily average of ·37 and 16, against 19 and 727, and a daily average of 1 and 14 respectively in 1880. 36 minor operations were performed. The government payment of the extra allowance of Rs. 10 a month to the hospital assistant of the sub-division was discontinued from August last. The total expenditure was Rs. 490, of which Rs. 82 was paid by government.

*Ramchunderpore.*—A first-class dispensary, entirely supported by Nawab Ashanwoollah Khan Bahadoor, of Dacca, whose agent presides over its affairs. The medical officer does not say whether he visited the dispensary, but simply remarks that no visit was paid by his

predecessor, Dr. Greene. A third-grade hospital assistant is in charge, who receives Rs. 35 a month. 769 out-patients were treated, against 831 in 1880; the daily average being 7 in both the years. 26 minor operations were performed. The total expenditure was Rs. 576. The Nawab contributes Rs. 100 per mensem towards the expenses of this institution

*Jaffergunge.*—A first-class dispensary, entirely supported by Rajah Hurrendra Krishna Bahadoor, of Calcutta, whose agent manages the dispensary affairs. Visited once by the magistrate, and twice by the medical officer. A third-grade hospital assistant is in charge, who receives Rs. 30 per mensem. There were treated 969 out-patients, against 786 in 1880; the daily average being 6 and 7. One major and 31 minor operations were performed. The total expenditure was Rs 422, of which Rs. 395 was expended on establishment. The Rajah contributes Rs. 60 per mensem towards the maintenance of this institution. At the end of the year there was a cash balance of Rs. 302.

*Chandpore.*—Closed on 1st August last, and is now kept up as a private dispensary. During the seven months of its existence under government supervision there were treated 429 out-patients, with a daily average of 14. The figures for 1880 were 772 and 7 respectively, which shows that the recorded attendance in 1881 is not trustworthy. A comparison of the total treated with the daily average will exhibit that each patient attended the dispensary more than seven times during the seven months. One major and 30 minor operations were performed. The total expenditure was Rs. 275, of which Rs. 80 was paid by government.

**Noakholly district.**

The general health of the district was worse than that of 1880, the mortality under all the heads showing an increase. The magistrate, however, thinks that the increase in figures was chiefly due to improved registration. There are two dispensaries in the district, of which the suddor dispensary was transferred to class I during the year. In-door patients are received in the sudder dispensary The total number of patients treated was 107 in and 4,082 out-patients, against 144 and 4,624 in 1880; the daily average being 5 and 27, against 6 and 28. The dispensaries are in charge of civil hospital assistants. One was transferred to the local municipality during the year. The managing bodies are said to take much interest in the dispensaries, but the people do not seem to appreciate them.

*Noakholly.*—Transferred to class I during the year, the municipality undertaking to maintain it independently of government aid. Visited thrice by the magistrate, and once each by the commissioner and the inspector of schools. The civil surgeon visited daily. A first-grade hospital assistant is in charge, who receives his full grade pay from the dispensary. 107 in and 2,765 out-patients were treated, against 144 and 3,163 in 1880; the daily average being 5 and 18, against 6 and 18. There were 5 deaths, against 10. 11 major and 161 minor operations were performed. The total expenditure was Rs. 1,423, of which Rs. 1,025 was expended on establishment. Government paid Rs. 234.

*Dulalbazar.*—A second-class dispensary, under the management of a committee, which met once in every month. Visited once by the magistrate, and twice by the civil medical officer. Government contributes Rs. 180 a year, or half the salary of the hospital assistant. The superfluous compounder and dresser, costing Rs. 13 per mensem, were discharged during the year. This reduction of establishment, the civil medical officer says, does not appear to have in any way affected the efficiency of the dispensary. 1,317 out-patients were treated, against 1,461 in 1880, with a daily average of 8 and 10 respectively. Minor operations numbered 101. The total expenditure was Rs. 460, and the total income from local sources was Rs. 480. Government paid Rs. 186. The dispensary is useless to the people. If its existence under government supervision be allowed, it may be maintained in class I, for which there are ample private funds.

## PATNA DIVISION.

The civil surgeons' reports of this division are accompanied by a letter from the commissioner containing some useful remarks of a general character. He records the bad public health of the year as a result of epidemic fever, and points to a corresponding rise of out-patient practice of dispensaries; notices also improved reports on medical subordinates in this division, and a fair amount of interest shown by committees in most of the districts.

**Patna district.**

The report of the Patna district is submitted by Dr. Simpson, who resumed charge of it on 18th December last, and was therefore unable to give any detailed information regarding the public health from his personal observation. Fever, a mild form of malarious intermittent, was unusually prevalent. There are 5 dispensaries in this district; all are in class II, and receive in-door patients. Four of these are in charge of assistant surgeons, and one (Dinapore) is under a first-class hospital assistant. The dispensaries at Patna, Barh, and Behar are under the management of the local municipalities, and the rest are managed by committees. From the number of meetings held and the large amount of subscriptions in arrears, it does not appear to the civil surgeon that much interest was shown by the managing bodies. The dispensaries are said to be appreciated by the poorer classes. The civil surgeon has no reason to doubt the correctness of the figures of attendance, but records no verification of them.

*Bankipore Dispensary or Temple Medical School Hospital.*—A second-class dispensary, under a local committee. No meetings were held, and no visits were paid by civil officers;

the civil surgeon paid frequent visits. Government contribution to the hospital, as provided in the budget estimates, was as follows:—

| | Rs. |
|---|---|
| One assistant surgeon ... ... ... ... | 900 (half pay). |
| Three compounders and one dresser ... ... | 264 |
| One clerk ... ... ... ... ... | 240 |
| Seven servants ... ... ... ... | 432 |
| Diet of patients ... ... ... ... | 2,035 |
| Country medicines ... ... ... ... | 180 |
| Miscellaneous charges ... ... ... ... | 600 |
| Total ... | 4,651 |

There were treated 954 in and 16,917 out-patients, against 1,012 and 14,548 in 1880; the daily average being 60 and 125, against 54 and 117. The increase in out-patients is attributed to the unusual amount of sickness prevailing in the district. The number of deaths among in-patients was 97, or 10·1 per cent., against 110, or 10·8 per cent. in 1880. 80 major operations were performed with 6 deaths; minor operations numbered 912. The total income, including Rs. 765, the balance on 1st January 1881, was Rs. 7,079, of which government contributed Rs. 3,865. Rs 1,800 was paid by the municipality. The total expenditure was Rs. 6,495, of which Rs. 3,039 represents the cost of establishment. The amount expended on medical stores was Rs. 1,133, of which Rs. 947 worth of medicines was purchased locally. At the end of the year there was a cash balance of Rs. 584, and an invested capital of Rs. 2 000 in government securities.

*Patna City Dispensary.*—A second-class dispensary, under the management of the local municipality. Two meeting were held. The surgeon-general visited the dispensary in November; the civil surgeon paid frequent visits, and the magistrate inspected once. The present assistant surgeon in charge is reported to be painstaking, but the civil surgeon has reason to doubt his fitness for the post. 302 in and 16,664 out-patients were treated, against 381 and 15,403 in 1880. The daily average attendance was 20 and 185, against 25 and 201. The number of deaths was 82, or 27·1 per cent., against 77, or 20 per cent. in 1880. There were 7 deaths from cholera, and 32 from bowel-complaints The large mortality in 1881 is said to be due to patients being often admitted in a moribund state. 47 major operations were performed, against 73 in 1880. This the civil surgeon says is unsatisfactory, as it appears that 27 of these operations—all of more important nature—were performed by the late assistant surgeon, so that little operative surgery has been performed within the last six months by the present incumbent, and the civil surgeon recommends his transfer from the charge. He has since been removed The number of minor operations performed shows an increase of 95 over that of 1880, which was 1,572. The total income, including Rs. 914 the balance on 1st January 1881, was Rs. 3,943, of which government paid Rs. 953. The municipality paid nothing. The total expenditure was Rs. 3,886, of which Rs. 2,570 was expended on establishment. At the end of the year there was an invested capital of Rs. 20,500 in government securities. Some of the superfluous servants employed in the dispensary were discharged during the year. Government contribution is confined to Rs 720, or half the salary of a third-grade assistant surgeon

*Barh.*—A second-class dispensary, governed by the local municipality. Government contributes Rs 720 a year, or half the salary of the assistant surgeon. Five meetings were held. The civil surgeon visited the dispensary twice; no visits were paid by civil officers. The civil surgeon says that a Mahomedan assistant surgeon would be more acceptable to the influential residents. One has since been appointed. 173 in and 5,047 out-patients were treated, against 158 and 4,176 in 1880; the daily average being 7 and 60, against 5 and 44. The death-rate in 1881 was 11·5, against 8·8 in the previous year. Of the 20 deaths, six are said to have been the result of injuries, and the higher death-rate in 1881 was due to those 17 major and 537 minor operations were performed with one death, the result of operation for lithotomy. The total income, including the cash balance on 1st January 1881, was Rs. 2,947, of which government paid Rs. 937. Rs. 480 was paid by the municipality. The total expenditure was Rs. 2,615, of which Rs. 1,989 was expended on establishment. The medical stores in 1881 were purchased from private druggists.

*Behar.*—A dispensary in class II, under the management of the local municipality. Five meetings were held. Visited twice by the commissioner, and once by the civil surgeon. A second-grade assistant surgeon is in charge, and government pays Rs. 90 a month towards his pay. Behar is a sub-division. There were treated 195 in and 5,330 out-patients, against 113 and 4,192 in 1880; the daily average being 13 and 59, against 7 and 51. There were 13 deaths, or 6·6 per cent., against 16·8 per cent. in 1880. 56 major operations were recorded with 2 deaths, but few of them seem to have been of an important nature. Minor operations numbered 272. The total income, including the balance Rs. 487 in hand on 1st Jaunary 1881, was Rs. 3,313, of which government paid Rs. 1,147. The total expenditure was Rs. 2,909, of which Rs. 2,294 was expended on establishment. The medical stores in 1881 were purchased in the local market. The municipality paid Rs. 733.

*Dinapore.*—A second-class dispensary, under the management of a committee composed of the sub-divisional officer, the officer commanding the station, the superintendent of the dispensary, &c. No meeting was held during the year. Government contribution is confined to Rs. 360 towards the salary of a first-class hospital assistant, and to Rs. 150 as special allowance in lieu of medicines. The dispensary was visited once by the surgeon-general, and once by the commissioner of the division, frequently by the staff surgeon, and twice each by the magistrate and civil surgeon. Dinapore is a sub-division. 334 in and 6,462 out patients were treated, against 279 and 6,084 in 1880, with a daily average of 10 and 77, against 9 and 57. There were 37 deaths, against 31; and the most of those who died, are said to have been brought to the hospital in a moribund state. 15 major operations were performed, with two deaths. The number of minor operations was 403. The total income, including a cash balance of Rs. 335 on 1st January 1881, was Rs. 2,148, of which government paid Rs. 661. It is said that Rs. 300, as special allowance in lieu of medicines, was drawn by the sub-divisional officer and credited to the trust fund. This is irregular. The amount can only be expended on the purchase of medicines obtained from the store department, and should not be credited to the dispensary fund. The medicines in 1881 was purchased from private druggists. The total expenditure was Rs. 1,747, of which Rs. 1,002 was expended on establishment. The dresser is not required.

**Gya district.** The general health of the district in 1881 was worse than that of the previous year. The mortality from cholera, small-pox, and fever showed a considerable increase. The civil surgeon states that the health of the population of the district in 1881 cannot be said to have been abnormally bad. It was considered better than the average, the death-rate in 1880 being unusually low. There are 5 dispensaries in this district—one in class I and four in class II. Four of these institutions receive in-patients. The daily average attendance in all the dispensaries was 19 in and 166 out-patients. The civil surgeon remarks that "these figures must be accepted with caution. Until lately it was the practice of civil hospital assistants in charge of dispensaries to include in the returns all patients who received medical aid, although he may never had attended at the dispensary, but were represented by friends even at the first recorded visit." Two of the dispensaries are in charge of assistant surgeons, and three under civil hospital assistants. One of these is managed by the local municipality, three by local committees, and one is under private management. Little interest is said to be taken by local committees. The people, it is stated, do not show any great appreciation of European medical treatment. The cases applying for treatment are generally those suffering from trivial diseases. The sudder dispensary, the civil surgeon says, does some real good, and is resorted to by the people to a considerable extent, especially by those suffering from diseases requiring surgical treatment.

*Gya Pilgrim Hospital.*—The hospital is said to be neither classed or graded. There is no reason for this. It is a second-class dispensary under the new rules. The municipality manage the dispensary. Government contribution is confined to Rs. 2,000 per annum, viz. Rs. 600 as allowance to the civil surgeon; Rs. 1,200, the full grade pay of the assistant surgeon; and Rs. 200 as special allowance in lieu of medicines. The place is a pilgrim resort. Visited by surgeon-general and commissioner, frequently by magistrate, and daily by civil surgeon. There were treated 386 in and 5,221 out-patients, against 335 and 4,606 in 1880; the daily average being 12 and 66, against 11 and 61. The increase in the number of patients is attributed more to the growing appreciation in which European medical treatment is held by the natives than to any unusual sickness in the town. The death-rate was 31·8 per cent., against 25·6. Of the 19 cholera cases admitted, 15 proved fatal. Moribund cases were also admitted to a large extent during the year. 51 major and 602 minor operations were performed. Of the major operations, 24 were for removal of stone. The income during the year was Rs. 3,605, of which government paid Rs. 2,029. The municipality paid Rs. 600. The total expenditure was Rs. 3,042, of which Rs. 2,429 represents the cost of establishment.

*Tikaree.*—A first-class dispensary, supported by the Maharani of Tikaree, whose agent manages the affairs of the institution. It was once visited by the magistrate, and three times by the civil surgeon. A civil hospital assistant was in charge till March 1881, when he was replaced by an assistant surgeon. An in-door ward was opened in May. There were treated 42 in and 3,122 out-patients, with a daily average of 3 and 42 respectively. The number of out-patients treated in 1880 was 1,316, with a daily average of 19. The death-rate was 12 per cent. 5 major and 160 minor operations were performed. The total expenditure was Rs. 1,569, of which Rs. 1,214 was expended on establishment. The invested capital at the end of the year was Rs. 27,673.

*Nowada.*—A sub-divisional dispensary in class II, managed by a local committee, which met four times during the year. It was inspected once by the magistrate, frequently by the sub-divisional officer, and thrice by the civil surgeon. There were treated 86 in and 941 out-patients, against 68 and 1,073 in 1880; the daily average being 2 and 11, against 1 and 12. The death-rate was 11·6 per cent. Thirty-seven minor operations were performed; no major operation. Government contributes Rs. 120 a year as allowance to the hospital assistant of the sub-division. The income of the dispensary during the year was Rs. 541. Government paid Rs. 128. The expenditure under the head of miscellaneous charges was high. The total expenditure was Rs. 633, of which Rs. 293 represents the cost of establishment.

*Aurungabad.*—A sub-divisional dispensary in class II, under the control of a local committee, which met only once during the year. Visited thrice by the magistrate, and seven times by the sub-divisional officer. The civil surgeon paid two visits. Government contributes Rs. 10 per mensem as extra allowance to the hospital assistant. 1 in and 1,575 out-patients were treated. The daily average of out-patients was 23, against 21 in 1880. The civil surgeon says that the figures seem to have little or no relation to local public health, and that the attendance seems to increase gradually from year to year, irrespective of epidemic or outbreaks of particular diseases. 50 minor operations were performed. The dispensary is of very little use to the people. The income from private sources was Rs. 323, and from government Rs. 126. The total expenditure was Rs. 455.

*Jehanabad.*—A second-class dispensary, under a local committee, which met four times during the year. The dispensary was visited twice each by the commissioner and the magistrate, three times by the civil surgeon, and 17 times by the sub-divisional officer. Jehanabad is a sub-division. Government contributes Rs. 180 a year towards the salary of the hospital assistant. 39 in and 1,545 out-patients were treated, against 59 and 1,636 in 1880, with a daily average of 1 and 23, against 1 and 21. There were 4 deaths; two of these were from snake bite and injuries. 6 major and 58 minor operations were performed. The income from local sources was Rs 825, and from government Rs. 251. The total expenditure was Rs. 1,067, of which Rs. 699 was expended on establishment. The expenditure on other heads was also too high for the work done. A superfluous compounder and a shop-cooly are maintained, costing Rs. 8 per mensem. There are ample private funds for the maintenance of the institution in class I.

**Shahabad district.**

The civil surgeon has submitted a full and interesting report, reviewing in detail the working of the dispensaries, especially the public health of the district and the relief afforded by government. The public health of the district was bad in 1881. Fevers prevailed epidemically throughout. There are seven dispensaries in the district, including the Dehree irrigation hospital. There is no class I dispensary, all are in class II; the Dehree hospital is in class III, being entirely supported by government. All the dispensaries receive in-door patients. The total daily average attendance was 32 in and 461 out-patients. The civil surgeon thinks the figures may generally be relied on, but the evidence does not inspire confidence. 4 assistant surgeons and 3 civil hospital assistants are in charge. Four of the dispensaries are under municipal management, two under local committees, and one under the irrigation department. It is stated that the managing bodies generally take interest in the affairs of the dispensaries, and that the dispensaries at Bhubooah and Dehree do not appear to be popular.

*Arrah.*—A second-class institution, governed by the local municipality. It was visited once by the commissioner, 4 times by the magistrate, and daily by the civil surgeon. Government contributes Rs. 720, or half the salary of the assistant surgeon. There were treated 266 in and 10,425 out-patients, against 276 and 9,006 in 1880; the daily average being 11 and 76, against 11 and 103. The decrease in the daily average attendance was due to the new method of calculation. The death-rate was 15·4 per cent., against 11·2 per cent. in 1880, the increase being due to admissions of moribund persons sent by the police, most of whom died. 984 minor and 50 major operations were performed; three of the latter proved fatal. The income during the year was Rs. 2,938, of which government paid Rs. 747. Rs. 680 was paid by the municipality. The total expenditure was Rs. 2,913, of which Rs. 2,004 represents the cost of establishment. The medical stores in 1881 were obtained from private druggists. The invested capital remaining at the end of the year was Rs. 9,687.

*Buxar.*—A second-class dispensary, managed by the local municipality. Visited twice each by the magistrate and civil surgeon, and six times by the sub divisional officer. A civil hospital assistant is in charge of the dispensary and the subsidiary jail. An assistant surgeon is in charge of the sub-division and jail. Government contribution is confined to Rs. 180 towards the salary of the civil hospital assistant. 115 in and 5,261 out-patients were treated. against 120 and 5,267 in 1880; the daily average being 5 and 67, against 6 and 65. The death-rate was 27·8 per cent., against 10 per cent in 1880, the large mortality in 1881 being due to admissions of many moribund cases. 11 major and 386 minor operations were performed. The income from local sources was Rs. 1,141, and from government Rs. 313. The total expenditure was Rs. 1,136, of which Rs. 641 was expended on establishment. The dispensary may pass into class I.

*Doomraon.*—A dispensary in class II, under a committee, who met once during the year. It is supported by the Maharajah of Doomraon, government contributing Rs. 900, or half the salary of a second-grade assistant surgeon. Visited thrice by the magistrate, and twice each by the sub-divisional officer and the civil surgeon. 68 in and 9,360 out-patients were treated, against 75 and 7,185 in 1880; the daily average being 2 and 103, against 3 and 93. The death-rate was 17·6 per cent., against 18·6. 23 major and 846 minor operations were performed. The income during the year was Rs. 2,264, of which government paid Rs. 824. The total expenditure was Rs. 2,366, of which Rs. 1,963 represents the cost of establishment. The dispensary has since passed into class I, the Maharajah undertaking to pay all the expenses.

*Jugdispore.*—A second-class dispensary, under the local municipality. It is chiefly supported by Messrs. Burrows, Thomson, and Mylne, the proprietors of the Jugdispore estate. Government contributes Rs. 420 per annum towards the salary of the hospital assistant. He is said to be very popular, but being advanced in years, his health is indifferent, and it is

believed he will soon retire on pension. 83 in and 7,467 out-patients were treated, against 165 and 6,192 in 1880; the daily average attendance being 2 and 35, against 3 and 31. There was no death among in-patients. 12 major and 288 minor operations were performed. The income during the year was Rs. 1,119, of which government paid Rs. 428 and the municipality Rs 106. The total expenditure was Rs. 1,119, of which Rs. 927 was expended on establishment.

*Saseeram.*—A second-class dispensary, governed by the local municipality. Visited once by the magistrate, frequently by the sub-divisional officer, and twice by the civil surgeon. An assistant surgeon is in charge, who receives Rs. 60 per mensem, or half the salary from government. Saseeram is a sub-division. 142 in and 7,423 out-patients were treated, against 127 and 5,331 in 1880. The daily average attendance was 6 and 125, against 7 and 79. The death-rate among in-patients was 12·6, against 10·2. 494 minor and 24 major operations were performed; three of the latter cases proved fatal. The total expenditure was Rs. 2,732, whereof government paid Rs. 732. The municipality contributed Rs. 636.

*Bhubooah.*—A second-class sub-divisional dispensary, under a committee, who met four times during the year. Visited once by the magistrate, four times by the sub-divisional officer, and twice by the civil surgeon. Government contributes Rs. 120 a year as extra allowance to the civil hospital assistant of the sub-division. The dispensary is said to be badly managed, and the appointment of a native of Behar is preferred. 41 in and 2,997 out-patients were treated, with a daily average of 2 and 24, against 46 and 2,518 with a daily average of 1 and 20 in 1880. The death-rate was the same as in 1880. 136 minor operations were performed. The income from local sources was Rs 572, whereof Rs. 194 was paid by the municipality; government paid Rs. 129. The total expenditure was Rs. 591. The private funds are enough for legitimate wants. The dispensary should be made a first-class sub-divisional institution.

*Dehree Irrigation Hospital.*—This is almost entirely supported by the Irrigation department, the governing body being the superintending engineer, Soane circle, and the executive engineer of the Dehree workshop division. The hospital was visited once by the surgeon-general, and twice by the civil surgeon. A second-grade assistant surgeon is in charge. 46 in and 3,110 out-patients were treated, against 45 and 2,167 in 1880; the daily average being 1 and 27, against 1 and 14. The death-rate was 17·4, against 13·3. 87 minor operations were performed; no major operation. The place does not afford work to the assistant surgeon. It is a suitable charge for a third-class hospital assistant. The total expenditure was Rs. 2,037, whereof Rs. 1,842 was expended on establishment.

**Durbhunga district.** The general health of the district was on the whole good. There was no epidemic of any kind. There are five dispensaries in the district, excluding the Tirhoot State Railway Hospital at Somastipore. With the exception of the dispensary at Naraya, all the institutions receive in-door patients. Three are maintained in class I, including one transferred during the year, and two in class II. The average daily attendance in all the dispensaries was 37 in and 253 out-patients, against 37 and 206 in 1880. The civil surgeon is satisfied with the accuracy of the figures of the Raj hospital, and he states that the figures of the branch dispensaries may be accepted as tolerably accurate. Three assistant surgeons and two civil hospital assistants are in charge. Two of these institutions are entirely supported by the Maharajah of Durbhunga, one under a local committee, and two under municipalities. The members of committees and managers of the institutions, are said to take interest in the dispensary affairs.

*Durbhunga.*—A first-class dispensary, supported by the Maharajah of Durbhunga. It is controlled by the manager. Visited occasionally by the civil officers; the civil surgeon paid daily visits. 392 in and 14,974 out-patients were treated, against 334 and 12,132 in 1880, the daily average being 22 and 89, against 23 and 77. The number of deaths among in-patients was 35, against 24 in 1880; the increase being due to the moribund state in which many of the patients were admitted. The number of major operations performed last year was greater than 1880, being 51, against 37. Minor operations numbered 423 in 1881. The total expenditure was Rs. 6,243.

*Naraya.*—A first-class dispensary, supported by the Maharajah. It was visited once by the sub-divisional officer of Madhubani, and twice by the civil surgeon. It is in charge of a third-grade hospital assistant, who is paid Rs. 50 per mensem. It is an out-door institution. The number of patients treated was 4,284, against 3,000 in 1880, the daily average being 27 and 22. No major operation; minor operations numbered 22 only. The total expenditure was Rs. 1,283, of which Rs. 689 was expended on establishment, and Rs. 500 on buildings. The amount expended on Europe medicines was Rs. 18 only, but the medicines are usually included in the Raj hospital indent, whence the stores are obtained

*Tajpore.*—A sub-divisional dispensary, transferred to class I in September last, government paying the grade pay of the civil hospital asssistant, and the dispensary an extra allowance of Rs. 10. It is managed by a committee presided over by the sub-divisional officer. Six meetings were held. The dispensary was visited thrice by the civil surgeon, and frequently by the sub-divisional officer. 84 in and 5,716 out-patients were treated, against 56 and 4,770 in 1880; the daily average being the same among in-patients, and among out-patients it was 36, against 32. There were 3 deaths, of which two were from injuries. Minor operations numbered 116. The total expenditue was Rs. 83 9, whereof government paid Rs. 129.

*Roserah*.—A second class dispensary, under the the management of the local municipality. Two special meetings on dispensary matters were held during the year, but dispensary affairs are generally discussed at the meetings of the municipal committee. Visited six times by the joint-magistrate, and twice by the civil surgeon. A third-grade assistant surgeon is in charge, half of whose salary, viz. Rs. 720 a year, is paid by government. An in-door ward was opened in April 1881. There were treated 15 in and 4,921 out-patients, the daily average being ·63 and 50. The corresponding number in 1880 was 2,538 out-patients, with a daily average of 30, or an increase of a daily attendance of 20 in 1881. Six major and 37 minor operations were performed. The total expenditure was Rs. 2,464, of which Rs. 1,563 was expended on establishment, and Rs. 701 on buildings. The government paid Rs. 731, and the municipality Rs. 880.

*Madhubani*.—A second class dispensary, under the management of the local municipality. There was one special meeting during the year. Visited frequently by the sub-divisional officer, and twice by the civil surgeon. A first grade assistant surgeon is in charge, who is paid Rs 140 a month by government, the dispensary paying him Rs. 60. The attendance in 1881 has increased considerably, and is said by the assistant surgeon to be due to steadily increasing popularity of the institution. There was no epidemic of any kind. The sub-division is considered the healthiest place in the district. 315 in and 11,342 out-patients were treated, against 177 and 5,951 in 1880; the daily average being 13 and 50, against 12 and 43. The enormous increase in the number treated is not represented in the daily average attendance, and the source of it has not been satisfactorily explained. The number of deaths among in-patients was the same as in 1880, that is, an increase of 138 in-door cases treated in 1881 showed no variation in the death-rate. Five major operations were performed. The total expenditure was Rs. 3,567, whereof government paid Rs. 1,694; the municipality paid Rs. 60 only. At the end of the year there was a cash balance of Rs. 625, and an invested capital of Rs. 2,000 in government securities.

**Mozufferpore district.**

The report of the civil surgeon is meagre and unsatisfactory, and shows insufficient attention to the few outlying dispensaries under his care. The public health of the district was bad in 1881. Fever was unusually prevalent, but it did not cause any general impairment of public health. There are four dispensaries in the district—three in class II, and one in class I. Three of these receive in-door patients. The total daily attendance in all the dispensaries was 19 in and 165 out-patients, against 25 and 131 in 1880. The civil surgeon thinks that incorrect figures have not been returned by the subordinates, but gives no reason for his opinion. Two of the institutions are in charge of assistant surgeons, and two under civil hospital assistants. The local municipalities control two dispensaries, and two are under the management of committees. The civil surgeon does not state what interest is taken by the managing bodies, and whether the dispensaries are appreciated by the people. The civil surgeon paid one visit each to two outlying dispensaries. The dispensary at Soorsund was not visited at all. Pressure of work in the sudder station is alleged to have prevented him from paying the usual visits, but this is scarcely satisfactory.

*Mozufferpore*.—A second-class dispensary, under the local municipality. The affairs of the institution are dealt with at the ordinary municipal meetings. It was once inspected by the commissioner, occasionally by the magistrate, and daily by the civil surgeon. An assistant surgeon is in charge, who receives Rs. 720 a year, or half the salary from government. 206 in and 12,586 out-patients were treated in 1881, against 190 and 8,966 in the previous year; the daily average being 12 and 88, against 15 and 71. The death-rate is said to be in favour of the year under report. No statistics given. 101 major operations—a rather high number—were performed, "with a fair average of success." There were seven deaths after operation. The total expenditure was Rs. 3,999, of which government paid Rs. 749. The establishment maintained is enormous. There are ample private funds for a first-class dispensary.

*Seetamurhee*.—A second-class dispensary, managed by local committee, who met three times during the year. Inspected twice by the magistrate, three times by the sub-divisional officer, and once by the civil surgeon. A second-grade assistant surgeon is in charge, who receives Rs. 90 per mensem from government, the dispensary paying him Rs. 60. The civil surgeon speaks unfavourably of the medical subordinate. 117 in and 3,794 out-patients were treated, against 119 and 3,500 in 1880: the daily average being 3 and 16, against 4 and 15. The death-rate was 4·2 per cent. Operative surgery has not been attended to. The major operations are represented by the removal of two tumours and the reduction of a dislocated elbow. The place does not afford work to an assistant surgeon, who should be replaced by a third-grade hospital assistant. Seetamurhee is a sub-division. The total expenditure was Rs. 2,519, whereof government paid Rs. 998. Of the total expenditure, Rs. 2,087 was expended on establishment. There was a cash balance of Rs. 613 at the end of the year, and an invested capital of Rs. 2,000 in government securities.

*Hazeepore*.—A second-class dispensary, under the municipality. Visited once each by the magistrate and the civil surgeon, and three times by the sub-divisional officer. Government contributes Rs. 300, or half the salary of the hospital assistant. Hazeepore is a sub-division 74 in and 4,841 out-patients were treated, against 115 and 4,038 in 1880; the daily average being 3 and 38, against 4 and 31. The attendance at the dispensary does not seem to have been affected by the local public health. The death-rate was 10·8 per cent, against 11·3 in

1880. Eight major operations of unimportant nature were performed. The total expenditure was Rs. 880, of which government paid Rs. 307.

*Soorsund.*—A first-class institution, managed by a committee, who held no meetingse during the year. Visited twice by the sub divisional officer; no visit was paid by the civil surgeon. The dispensary, it is stated, has not progressed during the incumbency of the present hospital assistant, who is said to be a poorly qualified officer and discontented with his position. The appointment of a well qualified officer and a native of Behar is recommended. 1,781 out-patients were treated, against 1,232, the daily average being 22 and 13 respectively. The total expenditure was Rs. 614, whereof Rs. 413 was expended on establishment, and Rs. 124 on miscellaneous items.

Sarun district.

The general health of the district was much worse than that of the previous year, and than the average standard. Cholera and bowel-complaints were more prevalent than in 1880, but malarious fevers appeared in an epidemic form throughout the district. There are six dispensaries in the district—one in class II and five in class I, two being transferred to class I during the year. Three of these receive in-door patients. The daily attendance in all the dispensaries was 31 in and 528 out-patients, against 29 and 310 in 1880. The civil surgeon regards with confidence the figures of the sudder dispensary. Of the figures of other institutions, he has "no reason to suspect" that they are incorrect, but has not personally tested any of them. Two institutions are in charge of assistant surgeons, and four under civil hospital assistants; the managing bodies being the local municipalities in three, and three are under private management. A fair amount of interest is said to be shown by the managing bodies generally, and the dispensaries are appreciated by the people. In conclusion of his report, the civil surgeon furnishes an interesting account of some particular surgical cases.

*Chupra.*—Transferred to class I during the year. The dispensary is managed by the local municipality, by whom eight meetings were held. It was visited by His Honor the Lieutenant-Governor, once inspected by the magistrate, and daily by the civil surgeon. 274 in and 15,817 out-patients were treated, against 277 and 9.011 in 1880; the daily average being 19 and 166, against 16 and 83. The death-rate was 13·1 per cent., against 8·6 in 1880. A large number of cases died from fatal injuries. Major operations were performed in 95 cases, with 8 deaths; minor operations numbered 551. The total expenditure was Rs. 4,727, whereof government paid Rs. 266. The invested capital at the end of the year was Rs. 17,700.

*Hutwa.*—A first-class dispensary, entirely supported by the Maharajah. There is no committee. His Honor the Lieutenant-Governor visited the dispensary towards the end of the year; the civil surgeon paid two visits. A third-grade assistant surgeon is in charge, who is paid Rs. 185 per mensem. There were treated 124 in and 13,174 out-patients, against 119 and 9,325 in 1880; the daily average being 8 and 95, against 9 and 63. The death-rate was 10·4 per cent. 8 major and 225 minor operations were performed. The total expenditure was Rs. 5,590, of which Rs. 2,556 was expended on establishment, and Rs. 2,307 on European medical stores for the Hutwa, Gopalgunge, and Bhori dispensaries, all of which are maintained by the Maharajah.

*Gopalgunge.*—A first-class dispensary, entirely supported by the Maharajah of Hutwa. No committee exists. Visited once by the magistrate, and twice by the civil surgeon. Gopalgunge is a sub-division. A civil hospital assistant is in charge, who receives Rs. 30 per mensem from the dispensary, and Rs. 10 are paid by government for the charge of the sub-division. The number of out door patients treated was 10,988, against 9,149 in 1880, the daily average being 63 against 43. 170 minor operations were recorded; no major operation. The total expenditure was Rs. 615. The cost of medicines was charged in the Hutwa dispensary accounts.

*Bhori.*—A first-class dispensary, entirely maintained by the Maharajah of Hutwa. No committee. Visited twice by the civil surgeon; no visits were paid by civil officers. A civil hospital assistant is in charge, who receives Rs. 30 per mensem. 4,785 out-patients were treated, against 4,224 in 1880, the daily average being 40 and 37. 46 minor operations were recorded. The total expenditure was Rs. 632. Medicines were supplied from the Hutwa dispensary.

*Sewan.*—Transferred to class I in June 1881. It is governed by the local municipality. Visited twice each by the magistrate and civil surgeon, and five times by the sub-divisional officer. An assistant surgeon was in charge. On the change of the status of the institution, a civil hospital assistant was placed in charge, who receives Rs. 55 per mensem from dispensary fund, government paying him an extra allowance of Rs. 10 for the charge of the sub-division. 95 in and 7,876 out-patients were treated, against 106 and 4,843 in 1880; the daily average being 3·2 and 99, against 3·8 and 40. The death-rate was 12·6 per cent., against 4·7 in 1880. Three deaths were from injuries. The total expenditure was Rs. 1,842, whereof government paid Rs. 369.

*Revilgunge.*—A second-class dispensary, under the management of the local municipality. Visited once by the commissioner, three times by the magistrate, and twice by the civil surgeon. Government contributes Rs. 300 a year, or half the salary of the hospital assistant. 5,557 out-patients were treated, against 2,628, the daily average being 61 and 41 respectively. No operations were recorded. The civil surgeon reports that the vice-chairman of the municipality has given great trouble with regard to the monthly statements of accounts, which he refused to submit until reference had been made to government.

Chumparun district.

The year under review was more unhealthy than the preceding year. Fevers and cholera were prevalent. There are four dispensaries in the district, all in class II. Three of these receive in-door patients. The total daily attendance in all the dispensaries was 17 in and 198 out-patients, against 21 and 155 in 1880. The civil surgeon has had the figures tested at the time of his inspection, but does not describe the test. He thinks that they may be regarded with confidence. Two assistant surgeons and two civil hospital assistants are in charge. Two of these institutions are under the management of the local municipalities, and two under local committees. It is said that the managing bodies generally show great interest in the dispensaries, which are much appreciated by the people, especially Motihari and Bagaha. The grounds of this opinion are not clear. The committees of outlying dispensaries met once or twice only in the entire year.

*Motihari.*—A second-class institution, under the management of the local municipality. Four visits were paid by the magistrate and the joint magistrate; the civil surgeon paid daily visits. An assistant surgeon is in charge, who received Rs. 720, or half the salary from government. A special allowance of Rs. 100 is also paid by government in lieu of medicines. There were treated 131 in and 26,997 out patients, against 159 and 15,736 in 1880; the daily average being 5 and 82, against 7 and 42. The large increase in 1881 is said to be due to increase in attendance for all the common diseases, especially fever, goitre, ulcers, &c. There were 21 deaths, against 13 in 1880, the increase being due to "greater gravity in the cases." Goitre is said to be endemic at the place. The largest number attending in any one day for treatment was 101, as the goitrous persons in a village are said to come together for treatment. 19 major operations were performed, against 31 in 1880. The income during the year was Rs. 2,415, of which government paid Rs. 838. The total expenditure was Rs. 2,352, whereof Rs. 1,822 was expended on establishment.

*Bettiah.*—A second-class dispensary, under the local municipality. One meeting was held. Visited once each by the commissioner and the magistrate; the civil surgeon paid three visits. An assistant surgeon is in charge, who receives Rs 720 a year, or half the salary, from government. 178 in and 7,054 out-patients were treated, against 266 and 5,798 in 1880; the daily average being 8 and 45, against 9 and 45. The new dispensary building was under construction, which accounts for the decrease in the number of in-door patients. 13 per cent. died. Goitre was the most prevailing disease. 9 major and 89 minor operations were performed, against 18 and 388 respectively in 1880. The income during the year was Rs. 5,142, whereof government paid Rs. 696. Of this amount Rs. 2,384 was realized as donations for the new building. The total expenditure was Rs. 5,052, of which Rs. 2,356 represents the amount expended on building, and Rs. 1,727 the cost of establishment.

*Burkurwa.*—A second-class dispensary, managed by a committee, who held two meetings during the year. Visited once by the magistrate, and thrice by the civil surgeon. Government contributes Rs. 180 a year, or half the salary of the hospital assistant. It is an out-door institution. The number of patients treated was 4,467, against 3,740; the daily average being 24, against 27. The decrease in the average daily attendance is ascribed to more correct record. Minor operations numbered 188; no major operation. The Maharajah of Bettiah, as usual in the cases of all dispensaries in the district, is the chief supporter of the institution; but it is said that no subscriptions were paid after May 1880, and the arrears amounted to Rs. 800, of which Rs. 520 was realized since the close of the year. The building of a new dispensary is in contemplation. The total expenditure was Rs. 752, whereof government paid Rs. 180. There are ample private funds for a first-class institution.

*Bagaha.*—A second-class dispensary, governed by a committee, who held only one meeting during the year. Visited once by the collector, and twice by the civil surgeon. Government contributes Rs. 180, or half the salary of the hospital assistant. 86 in and 5,273 out-patients were treated, against 90 and 3,815 in 1880; the daily average being 2 and 46, against 4 and 39. The increased attendance is attributed to the growing popularity of the institution. There were 14 deaths in 1881, against 8 in the previous year. The larger number of dysentery cases treated caused more deaths in 1881. The goitre cases were 30 per cent. of the total number treated. 10 cases of cholera were treated, against 312 in 1880. The hospital assistant is said to be somewhat of an enterprising character, having performed 23 surgical major operations. The income from local scources amounted to Rs. 780, and from government Rs. 187. The total expenditure was Rs. 1,134, whereof Rs. 601 represents the cost of establishment.

## BHAGULPORE DIVISION.

Monghyr district.

The civil surgeon's report is carelessly prepared. The general health of the district was not so good in 1881 as in the preceding year, but the mortality was less than that of 1879, and nearly the same as that of 1878. There were three dispensaries working at the end of the year. The dispensary at Begooserai was closed on 21st May 1881. Two of these institutions are in class I, one being transferred to class I during the year, and one in class II. In-door patients are received in two dispensaries. The total number of patients treated daily in all the dispensaries, including Begooserai, was 202, against 196 in 1880. The figures of the sudder dispensary may be regarded with confidence, and the returns of other dispensaries, the civil surgeon believes, are generally correct, but he gives only examination of returns as the ground of his belief. One assistant surgeon and two civil hospital assistants are in charge. The management of one of these dispensaries was vested in the

municipality, one was controlled by a local committee, and one remained under private management. The managers are said to take interest in the dispensaries.

*Monghyr.*—A second-class dispensary, under the municipality. Its affairs are considered at the ordinary meetings of the commissioners. Visited once each by the commissioner and the magistrate; the civil surgeon paid almost daily visits. A second-grade assistant surgeon is in charge, who receives Rs. 90 per mensem from government, and Rs. 60 from the dispensary fund. There were treated 581 in and 14,649 out-patients, against 537 and 10,834 in 1880; the daily average attendance being 37 and 100, against 36 and 90. The increase corresponds with the general unhealthiness of the district. The death-rate was 8 per cent., against 9·1 in 1880. The civil surgeon shows that the death-rate was 3·08 per 1,000, against 4·3, which is absurd. He appears to have included out-patients in calculating mortality. Diarrhœa and dysentery were most fatal, the cases being brought to the hospital in their last stage. 166 major operations were performed, against 196 in 1880, with 2 deaths recorded. On the transfer of the dispensary to the municipality in 1880, it was said that the voluntary subscriptions had been withdrawn. In the year under report Rs. 3,685 have been shown as the amount contributed from the municipal funds. It is, however, stated by the civil surgeon that the municipality have paid about Rs. 69 a month during the year, while their former contribution, before they took over the management of the dispensary, was Rs. 100. The income during the year was Rs 5,177, whereof government contributed Rs. 1,198. The total expenditure was Rs. 5,527. The invested capital remaining at the end of the year was Rs. 6,500 in government securities.

*Khuruckpore.*—A first-class dispensary, entirely suported by the Maharajah of Durbhunga and is under his private management. It was visited once by the magistrate, and twice by the civil surgeon. A third class hospital assistant is in charge. 83 in and 4,495 out-patients were treated, against 114 and 2,340 in 1880; the daily average being 3 and 34, against 3 and 19. The death-rate was 6 per cent., against 5 2. One major operation (paracentesis abdominis) was performed; the number of minor operations is not stated. The total expenditure was Rs. 1,226, inclusive of Rs. 21, being the cost of forms supplied by government.

*Jamooee.*—Transferred to class I in June 1881. The in-door ward was abolished. The dispensary is under the management of a committee presided over by the sub-divisional officer of Jamooee. Four meetings were held during the year. Visited once by the district magistrate, five times by the sub-divisional officer, and twice by the civil surgeon. 22 in and 1879 out-patients were treated, against 57 and 1,700 in 1880; the daily average being ·6 and 16, against 2 and 15. There were two deaths—one from injuries. 24 major operations were performed—all paracentesis abdominis The total expenditure was Rs. 1,112, of which Rs. 655 was expended on establishment, and Rs. 293 on buildings. Government contributed Rs. 95.

*Begooserai.*—Closed on 21st May 1881. 7 in and 1,151 out-patients were treated to the date of closure. The total expenditure was Rs. 777, of which government paid Rs. 262. There was an invested capital of Rs. 3,300 in government securities. The opening of a new dispensary is proposed.

**Bhagulpore district**

It appears from the returns of deaths that the year under report was much more unhealthy than the previous year, but the civil surgeon does not think that much reliance can be placed on their accuracy. The general impression is that the health of the public during the year was on the whole good. There were eight dispensaries in the district, of which two were closed during the year. Four of the eight received in-patients. The total daily attendance in all the dispensaries was 188, against 202. The civil surgeon thinks that the figures may be fairly relied on as being correct, but the returns are the only evidence. Of the six dispensaries remaining at the end of the year, four were in class II, and two in class I, one being transferred to the latter class during the year. Bhagulpore and Muddepoorah dispensaries were in charge of assistant surgeons, and the rest were under civil hospital assistants. The managing bodies are said to show a great indifference to the dispensaries.
